Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
City of Dryden Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.078
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly
For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
City of Dryden Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
City of Dryden Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
City of Dryden Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Dundalk Energy Services
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	11.32
Distribution Volumetric Rate	$ / kWh	0.0164
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0023
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0009
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Dundalk Energy Services
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Durham Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	11.59
Distribution Volumetric Rate	$ / kWh	0.0137
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0015
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0006
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Durham Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

for the Service Area Formerly Served by
Public Utilities Commission of the Village of Eganville
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Eganville
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Public Utilities Commission of the Village of Eganville
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Erin
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Erin
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Erin
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro-Electric Commission of the Town of Erin
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Exeter
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	10.08
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0006
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Exeter
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Exeter
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Exeter
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Fenelon Falls Board of Water, Light and Power Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Fenelon Falls Board of Water, Light and Power Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Regulatory Asset Recovery - Rider #2	$ / kWh	0.0008
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Fenelon Falls Board of Water, Light and Power Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Town of Forest Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Town of Forest Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Large Use - see Note 1

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Note (1) The former Large Use class is now part of the ST class, which is separate from the classes for customers of acquired distribution companies.
This former class refered to individual Customers whose monthly measured maximum demand (kW) averaged over the most recent 12 consecutive months is equal to or greater than 5,000 kW.

Georgian Bay Energy Inc.
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.078
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers (excluding Large Users) providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Georgian Bay Energy Inc.
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Georgina Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein

This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.

RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential

This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.

Further servicing details are available in the utility's Conditions of Service.

General Service

This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load

This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.

Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Georgina Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Glencoe
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Glencoe
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Public Utilities Commission of the Village of Glencoe
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Glencoe
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of Village of Grand Bend
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	13.72
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0007
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of Village of Grand Bend
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of Village of Grand Bend
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of Village of Grand Bend
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Hastings
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Hastings
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro Electric Commission of the Township of Havelock-Belmonth-Methuen
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	10.63
Distribution Volumetric Rate	$ / kWh	0.0152
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0016
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0009
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers

Primary Voltage under 50 kV (per kW)		
Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro Electric Commission of the Township of Havelock-Belmonth-Methuen
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Kirkfield Hydro Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	6.88
Distribution Volumetric Rate	$ / kWh	0.0195
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0061
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0044
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Kirkfield Hydro Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Township of Lanark Highlands
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Township of Lanark Highlands
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Township of Lanark Highlands
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Larder Lake Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Larder Lake Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Larder Lake Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

for the Service Area Formerly Served by
Larder Lake Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

SERVICE CLASSIFICATIONS

Residential

This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.

Further servicing details are available in the utility's Conditions of Service.

General Service

This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load

This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.

Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	6.14
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0020
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Latchford Hydro Electric
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly
For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Latchford Hydro Electric
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Latchford Hydro Electric
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Lindsay Hydro Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Lindsay Hydro Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	11.50
Distribution Volumetric Rate	$ / kWh	0.0138
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0015
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0006
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Lindsay Hydro Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

MONTHLY RATES AND CHARGES

Residential

Service Charge	$	11.72
Distribution Volumetric Rate	$ / kWh	0.0142
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0037
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0017
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0055
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0047
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

General Service - Energy Billed (less than 50 kW)

Service Charge	$	16.99
Distribution Volumetric Rate	$ / kWh	0.0147
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0017
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0010
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

General Service - Demand Billed (50 kW or greater)

Service Charge	$	16.99
Distribution Volumetric Rate	$ / kW	4.61
Regulatory Asset Recovery - Rider #1	$ / kW	0.53
Regulatory Asset Recovery - Rider #2	$ / kW	0.30
Retail Transmission Rate - Network Service Rate (4)	$ / kW	1.94
Retail Transmission Rate - Line and Transformation Connection Service Rate (4)	$ / kW	1.61
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Lucan Granton Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	8.03
Distribution Volumetric Rate	$ / kWh	0.0147
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0017
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0010
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Lucan Granton Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein

This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.

RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential

This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.

Further servicing details are available in the utility's Conditions of Service.

General Service

This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load

This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.

Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Power Commission of the Township of Malahide
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Power Commission of the Township of Malahide
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Mapleton
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Mapleton
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Hydro-Electric Commission of the Township of Mapleton
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"
Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.
Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.
Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

29	Guaranteed Units from Jan 01/87 to Dec 31/90			$23.50 / month	
30	Joint Use for Cable and Telecom companies per pole			$22.35	
31	Joint Use for LDCs per pole			$28.61	

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Markdale Hydro System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Markdale Hydro System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Markdale Hydro System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Markdale Hydro System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Retail Transmission Rate - Network Service Rate (4)	$ / kW	1.11
Retail Transmission Rate - Line and Transformation Connection Service Rate (4)	$ / kW	1.00
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Marmora Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	9.24
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0005
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Marmora Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Marmora Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Marmora Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
McGarry Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
McGarry Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	9.52
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0057
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0050
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
McGarry Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Public Utilities Commission of the Town of Meaford
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	11.55
Distribution Volumetric Rate	$ / kWh	0.0123
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0016
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0007
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Town of Meaford
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
lydro-Electric Commission of the Corporation of the Township of Middlesex Centre
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

for the Service Area Formerly Served by
Hydro-Electric Commission of the Corporation of the Township of Middlesex Centre
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Napanee Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Napanee Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Nipigon Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Nipigon Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Nipigon Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Nipigon Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	11.51
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0026
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Township of North Dorchester Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Township of North Dorchester Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Township of North Dorchester Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

25	Standby Administration Charge per month		$440		
26	Sentinel Lights Rental Rate per month			$7.10	
27	Sentinel Pole Rental Rate per month			$4.15	
28	Joint Use for Cable and Telecom companies per pole			$22.35	
29	Joint Use for LDCs per pole			$28.61	

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Corporation of the Township of North Dundas
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Corporation of the Township of North Dundas
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"
Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.
Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.
Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES

Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	6.29
Distribution Volumetric Rate	$ / kWh	0.0083
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0016
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0004
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Corporation of the Township of North Dundas
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
North Glengarry Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
North Grenville Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of the Town of North Perth
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Unmetered, Scattered Load

Service Charge	$	16.80
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0004
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of the Town of North Perth
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Public Utility Commission of the Town of North Perth
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of the Town of North Perth
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
North Stormont Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
North Stormont Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
North Stormont Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

for the Service Area Formerly Served by
North Stormont Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting
This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Sentinel Lighting
This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility’s Conditions of Service.

Interim Demand-Side Management Time-of-Use
This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"
Note (2):
Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.
Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.
Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Omemee Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Omemee Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Omemee Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of the Town of Perth
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	9.49
Distribution Volumetric Rate	$ / kWh	0.0092
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0013
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0004
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers

Primary Voltage under 50 kV (per kW)		
Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utility Commission of the Town of Perth
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
The Corporation of the Township of Perth East Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Prince Edward Public Utilities Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Prince Edward Public Utilities Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Quinte West Electric Distribution Inc.
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Large Use - see Note 1

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Note (1) The former Large Use class is now part of the ST class, which is separate from the classes for customers of acquired distribution companies.
This former class refered to individual Customers whose monthly measured maximum demand (kW) averaged over the most recent 12 consecutive months is equal to or greater than 5,000 kW.

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Quinte West Electric Distribution Inc.
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.078
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential, Lighting or Large Use. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Quinte West Electric Distribution Inc.
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Large Use

This classification refers to individual Customers whose monthly measured maximum demand (kW) averaged over the Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service and Large Use accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Rainy River Public Utilities Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Rainy River Public Utilities Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of beinç metered on the primary side of a transformer. The following uniform values shall be applied tc measured demand and energy to calculate transformer losses for voltages up to and includinç 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, anc measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformeı capacity will be used to calculate the loss allowance. Where several transformers are involved the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Rainy River Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Rainy River Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Ramara Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Ramara Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Ramara Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Red Rock Hydro System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	10.36
Distribution Volumetric Rate	$ / kWh	0.0194
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0027
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0024
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Red Rock Hydro System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Police Village of Russell Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	9.17
Distribution Volumetric Rate	$ / kWh	0.0224
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0018
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0011
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Police Village of Russell Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Schreiber Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Schreiber Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Severn Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Severn Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES

Severn Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Shelburne
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	13.00
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0002
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Shelburne
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly
For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Shelburne
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Shelburne
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Town of Shelburne
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Smiths Falls Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Smiths Falls Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Service Charge	$	4.46
Distribution Volumetric Rate	$ / kWh	0.0105
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0012
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0004
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES

Smiths Falls Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
South Bruce Peninsula Energy Inc.
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
South Bruce Peninsula Energy Inc.
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"
Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.
Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.
Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Distribution Volumetric Rate	$ / kWh	0.0075
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0037
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0030
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Township of South Glengarry
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Village of South River Public Utilities Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Springwater
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Springwater
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Springwater
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Springwater
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro-Electric Commission of the Township of Springwater
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Township of Springwater
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Stirling-Rawdon Public Utilities Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly
For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

for the Service Area Formerly Served by
Stirling-Rawdon Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Stirling-Rawdon Public Utilities Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Terrace Bay Superior Wires Inc.
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Large Use - see Note 1

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Note (1) The former Large Use class is now part of the ST class, which is separate from the classes for customers of acquired distribution companies.
This former class refered to individual Customers whose monthly measured maximum demand (kW) averaged over the most recent 12 consecutive months is equal to or greater than 5,000 kW.

TARIFF OF RATES AND CHARGES

Effective October 25, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

- The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Codes, Guidelines or Orders of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.
- No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
- This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES – October 25, 2007 for all consumption or deemed consumption services used on or after that date.
SPECIFIC SERVICE CHARGES – October 25, 2007 for all charges incurred by customers on or after that date.
LOSS FACTOR ADJUSTMENT – October 25, 2007 unless the distributor is not capable of prorating changed loss factors jointly with distribution rates. In that case, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

SERVICE CLASSIFICATIONS

Residential
This classification applies to an account taking electricity at 750 volts or less where the electricity is used exclusively in a separate metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triplex or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. All customers are single-phase.

General Service Less Than 50 kW
This classification applies to a non residential account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW.

General Service 50 to 4,999 kW
This classification applies to a non residential account whose average monthly maximum demand used for billing purposes is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 5,000 kW.

Unmetered Scattered Load
This classification applies to an account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. Such connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The level of the consumption will be agreed to by the distributor and the customer, based on detailed manufacturer information/documentation with regard to electrical consumption of the unmetered load or periodic monitoring of actual consumption.

Street Lighting
This classification applies to an account for roadway lighting with a Municipality, Regional Municipality, Ministry of Transportation and private roadway lighting, controlled by photo cells. The consumption for these customers will be based on the calculated connected load times the required lighting times established in the approved OEB street lighting load shape template.

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Thedford
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Thedford
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Public Utilities Commission of the Village of Thedford
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

for the Service Area Formerly Served by
Public Utilities Commission of the Village of Thedford
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Regulatory Asset Recovery - Rider #2	$ / kWh	0.0031
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.

(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Public Utilities Commission of the Village of Thedford
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thessalon Hydro Distribution Corporation
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorndale Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorndale Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorndale Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorndale Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Thorndale Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Thorold Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	13.67
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0006
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorold Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.078
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,

(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorold Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Thorold Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

26	Sentinel Lights Rental Rate per month			$7.10	
27	Sentinel Pole Rental Rate per month			$4.15	
28	Joint Use for Cable and Telecom companies per pole			$22.35	
29	Joint Use for LDCs per pole			$28.61	

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Tweed Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Tweed Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Unmetered, Scattered Load

Service Charge	$	3.67
Distribution Volumetric Rate	$ / kWh	0.0097
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0043
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0031
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Tweed Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,

(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

Wardsville Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

MONTHLY RATES AND CHARGES

Residential

Service Charge	$	9.64
Distribution Volumetric Rate	$ / kWh	0.0097
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0036
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0010
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0055
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0047
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

General Service - Energy Billed (less than 50 kW)

Service Charge	$	12.32
Distribution Volumetric Rate	$ / kWh	0.0100
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0025
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0008
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

General Service - Demand Billed (50 kW or greater)

Service Charge	$	12.32
Distribution Volumetric Rate	$ / kW	3.16
Regulatory Asset Recovery - Rider #1	$ / kW	0.81
Regulatory Asset Recovery - Rider #2	$ / kW	0.26
Retail Transmission Rate - Network Service Rate (4)	$ / kW	1.94
Retail Transmission Rate - Line and Transformation Connection Service Rate (4)	$ / kW	1.61
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Wardsville Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	5.70
Distribution Volumetric Rate	$ / kWh	0.0100
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0025
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0008
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Wardsville Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Hydro-Electric Commission of the Police Village of Warkworth
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Hydro-Electric Commission of the Police Village of Warkworth
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
West Elgin Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
West Elgin Hydro Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers		
Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Residential
This classification refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Whitchurch-Stouffville Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Urban Density Classification

Customers who meet the Urban Density Criteria of being in an area containing 3,000 or more customers with a line density of at least 60 customers per kilometre, will be mapped to an Urban customer classification.

Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Whitchurch-Stouffville Hydro-Electric Commission
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.078
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Whitchurch-Stouffville Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Whitchurch-Stouffville Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Whitchurch-Stouffville Hydro-Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Distribution Volumetric Rate	$ / kW	9.22
Regulatory Asset Recovery - Rider #2	$ / kW	1.35
Regulatory Asset Recovery - Rider #3	$ / kW	(0.22)
Retail Transmission Rate - Network Service Rate (4)	$ / kW	1.11
Retail Transmission Rate - Line and Transformation Connection Service Rate (4)	$ / kW	1.00
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Woodville Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	11.38
Distribution Volumetric Rate	$ / kWh	0.0200
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0048
Regulatory Asset Recovery - Rider #3	$ / kWh	(0.0006)
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0035
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0032
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer's metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer's peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Customer-Supplied Transformation Allowance

Applicable to customers providing their own transformers

Demand-billed	$ / kW	0.60
Energy-billed	$ / kWh	0.0014

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Woodville Hydro-Electric System
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Residential	1.085
General Service Less Than 50 kW (Energy-Billed)	1.092
General Service 50 kW or Greater (Demand-Billed)	1.061
Unmetered Scattered Load	1.092

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Woodville Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One’s discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility’s Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility’s Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility’s Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Woodville Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Woodville Hydro-Electric System
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

16	Service Layout Fee – Complex		$690		
17	Crossing Application – Pipeline		$2,445		
18	Crossing Application – Water		$3,045		
19	Crossing Application – Railroad		$2,945		
20	Line Staking – per meter		$3.70		
21	Central Metering – New service < 45 kW		$115		
22	Conversion to Central Metering < 45 kW		$915		
23	Conversion to Central Metering > 45 kW		$800		
24	Tingle Voltage Test – In Excess of 4 Hours (per hour – average 2 additional hours)		$125		
25	Standby Administration Charge per month		$440		
26	Sentinel Lights Rental Rate per month			$7.10	
27	Sentinel Pole Rental Rate per month			$4.15	
28	Joint Use for Cable and Telecom companies per pole			$22.35	
29	Joint Use for LDCs per pole			$28.61	

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Village of Wyoming Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007

SERVICE CLASSIFICATIONS

Residential
This classification (note 1) refers to all service supplied to single-family dwelling units for domestic or household purpose. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as General Service, but, at Hydro One's discretion, up to four residential units may be classified as residential. Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One based on such considerations as the estimated predominant consumption.
Further servicing details are available in the utility's Conditions of Service.

General Service
This classification (note 1) refers to all service supplied to premises other than those classified as Residential or Lighting. Some General Service accounts are energy(kWh)-billed, and some are demand(kW)-billed. Further servicing details are available in the utility's Conditions of Service. Also, see note 2.

Unmetered Scattered Load
This classification refers to certain instances where connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion. Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads.
Further servicing details are available in the utility's Conditions of Service (including in the "Unmetered Connections" section).

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Village of Wyoming Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Street Lighting

This classification refers to accounts for the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation. These street lights in fact belong to the Street Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Sentinel Lighting

This classification refers to accounts for a separate service to a sentinel light. These sentinel lights in fact belong to the Sentinel Lighting class of the Hydro One core Retail rates. For their rates, see the Hydro One core Retail rates. Further servicing details are available in the utility's Conditions of Service.

Interim Demand-Side Management Time-of-Use

This is potentially applicable to Demand-billed General Service accounts. See Note 2 below.

Note (1): Classification descriptions are paraphrases from the document "Hydro One Networks Inc. - Distribution Customers Conditions of Service - August 2004"

Note (2):

Interim Demand-Side Management Time-of-Use Rates: demand charges will be based on demand during the on-peak periods.

Criteria: Customers' electricity consumption (kW) in the off-peak period is at least twice the electricity consumption (kW) during the on-peak period.

Definition of Time Periods: The on-peak hours will be between 0700 hours to 1900 hours Eastern Standard Time during the winter (standard time) on IESO business days and 0600 hours to 1800 hours Eastern Standard Time during the summer (daylight savings time) on IESO business days. The off-peak period constitutes all of the remaining hours.

TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Village of Wyoming Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Unmetered, Scattered Load

Service Charge	$	8.22
Distribution Volumetric Rate	$ / kWh	0.0145
Regulatory Asset Recovery - Rider #1	$ / kWh	0.0016
Regulatory Asset Recovery - Rider #2	$ / kWh	0.0007
Retail Transmission Rate - Network Service Rate (3)	$ / kWh	0.0050
Retail Transmission Rate - Line and Transformation Connection Service Rate (3)	$ / kWh	0.0043
Wholesale Market Service Rate (3)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (3)	$ / kWh	0.0010
Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

(3) For energy-only metered customers, the billing determinant is the customer’s metered energy consumption adjusted by the total loss factor as approved by the Board for Acquired LDC customers.
(4) For demand billed customers, appropriate loss factors must be applied to the applicable tariffs. Also the billing determinant for the Line and Transformation Connection Services rate is the customer’s peak demand in the billing period. The billing determinant for the Network Services rate is: for non-interval-metered customers, the peak demand in the billing period, and for interval-metered customers, the peak demand between 7 AM and 7 PM local time on IESO business days

Interim Demand-Side Management Time-of-Use

See the "Service Classifications" section of this schedule.

Customer-Supplied Transformation Allowance

Applicable to demand-billed customers providing their own transformers
Primary Voltage under 50 kV (per kW)

Single Phase	$ / kW	0.20
Three Phase	$ / kW	0.60

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Service Area Formerly Served by
Village of Wyoming Hydro Electric Commission
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

Loss Factors

Supply Facilities Loss Factor	1.0045
Distribution Loss Factors	
Customer less than 5,000 kW	1.0500
Customer greater than or equal to 5,000 kW	1.0100
Total Loss Factors	
Customer less than 5,000 kW	1.0545
Customer greater than or equal to 5,000 kW	1.0145

Transformer Loss Allowance

Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

(a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,

(b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Sub-Transmission (ST) Class
Effective Date: May 1, 2008

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2008 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2008 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – for all consumption or deemed consumption services billed following May 1, 2008 or later

SERVICE CLASSIFICATIONS

Sub-Transmission (ST)
This classification refers to
a) Embedded supply to Local Distribution Companies (LDCs), "Embedded" meaning receiving supply via Hydro One Distribution assets, and where Hydro One is the Host distributor to the Embedded LDC. Situations where the LDC is supplied via Specific Facilities are included.
or
b) load which:
i) is three-phase; and
ii) is directly connected to and supplied from Hydro One Distribution assets between 44 kV and 13.8 kV inclusive; the meaning of "directly" includes HON not owning the local transformation; and
iii) is greater than 500 kW (monthly measured maximum demand averaged over the most recent calendar year or whose forecasted monthly average demand over twelve consecutive months is greater than 500 kW).
Any new customer satisfying the criteria for ST classification, will be classified as an ST account.
Further servicing details are available in the utility’s Conditions of Service.

Standard Supply Service (Regulated Price Plan) - Administration Charge	$	0.25

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Sub-Transmission (ST) Class
Effective Date: May 1, 2008

Loss factors

Supply Facilities Loss Factor	1.006
Distribution Loss Factors	
Embedded Delivery Points (metering at station)	1.000
Embedded Delivery Points (metering away from station)	1.028
Total Loss Factors	
Embedded Delivery Points (metering at station)	1.006
Embedded Delivery Points (metering away from station)	1.034

Where the feeder delivers to solely one supply point, and the metering is located away from the supplying Transformer Station or High Voltage Distribution Station, the customer will calculate the applicable losses based on an engineering study. The study will identify a Site Specific Loss Adjustment (SSLA) and a radial line loss as appropriate, to which will be added non-technical losses consistent with the method inherent in the existing Distribution Loss Factor. This calculated value would replace the average Total Loss Factor.

Where the metering is at the supplying TS or HVDS (either inside the fence or immediately outside the fence), the DLF will not be applied, but solely the losses associated with the transformation at the station will be applied, ie. the approved Supply Facilities Loss Factor.

Where there is no metering at the customer supply point, causing quantities to be calculated by taking the differences between other metering, to avoid double-counting losses, the normal application of the DLF to the difference in metering quantities can be replaced by a calculation uplifting the meter quantities separately.

Transformer Loss Adjustment

Applicable to ST customers requiring a billing adjustment for transformer losses as the result of being metered on the secondary side of a transformer.
This uniform value shall be added to measured demand and energy (as metered on the secondary side) to adjust for transformer losses: 1.0%
Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Sub-Transmission (ST) Class
Effective Date: May 1, 2008

NOTES:

Note (1): The basis of the charge is the customer's monthly maximum demand. For a customer with multiple delivery points served from the same Transformer Station or High Voltage Distribution Station, the aggregated demand will be the applicable billing determinant. Demand is not aggregated between stations.

Note (2): The basis of the charge is kilometres of line, within the supplied LDC's service area, supplying solely that LDC.

Note (3): These rates are based on the "non-coincident demand" at each delivery point of the customer supplied by the station. This is measured as the kW demand at the delivery point at the time in the month of maximum load on the delivery point. For a customer connected through two or more distribution stations, the total charge for the connection to the shared distribution stations is the sum of the relevant charges for each of the distribution stations.

Note (4): Regulatory Asset Recovery "Rate Rider #2" began in 2006 and will end in 2010. Each ST customer will maintain the same Rate Rider #2 as it had in its pre-ST class, even if not listed above.

Note (5): Regulatory Asset Recovery "Rate Rider #2" values are specific to each LDC and each Direct.

Note (6): The monthly billing determinant for the RTSR Network Service rate is:
- for interval-metered customers the peak demand from 7 AM to 7 PM (local time) on IESO business days
- for non-interval-metered customers the non-coincident peak demand

Note (7): The monthly billing determinant for the RTSR Line and Transformation Connection Service rates is the non-coincident peak demand.

Note (8): Delivery point with respect to Retail Transmission Rates is defined as the low side of the Transformer Station that steps down voltage from above 50 kV to below 50 kV. For a customer's multiple interval-metered delivery points served from the same Transformer Station, the aggregated demand at the said delivery points on the low side of the Transformer Station will be the applicable billing determinant.

Note (9): These rates pertain to the IESO's defined point of sale; consequently, appropriate loss factors as approved by the Board and set out in Hydro One Distribution's loss factors must be applied to the metered load of energy-metered customers. Similarly, appropriate loss factors as approved by the Board and set out as Hydro One Distribution's loss factors must be applied to the applicable tariffs of demand-billed customers.

Note (10): The loss factors, and which connection service rates are applied, are determined based on the point at which the distribution utility or customer is metered for its connection to Hydro One Distribution's system. Hydro One Distribution's connection agreements with these distribution utilities and customers will establish the appropriate loss factors and connection rates to apply from Hydro One Distribution's tariff schedules.

Note (11) : The Common ST Lines rate also applies to the small amount of supply to Distributors which uses lines in the 12.5 kV to 4.16 kV range from HVDSs or LVDSs.

Note (12) : "Rider 3A - General" applies to those customers who were charged Retail Transmission Service Network Charges.

Note (13) : "Rider 3B - Wholesale Market Service Charge" applies to those customers who were charged Wholesale Market Service Charges.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Direct and Embedded LDC Classes
Effective Date: May 1, 2007

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

APPLICATION

The application of these rates and charges shall be in accordance with The Licence of The Distributor and any Codes, Guidelines or Orders of The Board, and amendments thereto as approved by The Board, which may be applicable to the administration of this schedule.
No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code, Guideline or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
This schedule does not contain any rates and charges relating to the electricity commodity (e.g. the Regulated Price Plan).

EFFECTIVE DATES

DISTRIBUTION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.

MISCELLANEOUS CHARGES - May 1, 2007 for all charges billed to customers on or after that date.
RETAIL TRANSMISSION RATES - May 1, 2007 for all consumption or deemed consumption services used on or after that date.
LOSS FACTOR ADJUSTMENT – May 1, 2007.

SERVICE CLASSIFICATIONS

Direct

This classification refers to industrial or commercial customers other than acquired Large Users or Sub-transmission (T class) Customers, whose monthly measured maximum demand averaged over the most recent calendar year or whose forecasted monthly average demand over twelve consecutive months is equal to or greater than 5000 kW and who are directly connected to Hydro One Distribution’s Low Voltage (LV) system. The meaning of "directly" includes HON not owning the local transformation.
Any new customer satisfying the criteria for Direct classification, will be classified as a Direct.
Further servicing details are available in the utility’s Conditions of Service.

Embedded Local Distribution Company (LDC)

This classification refers to Embedded supply to Local Distribution Companies (LDCs), "Embedded" meaning receiving supply via Hydro One Distribution's Low Voltage (LV) system and where Hydro One is the Host distributor to the Embedded LDC. Situations where the LDC is supplied via Specific Facilities are included. Further servicing details are available in the utility’s Conditions of Service.

for the Direct and Embedded LDC Classes
Effective Date: May 1, 2007

MONTHLY RATES AND CHARGES

Direct

Facility charge for shared LV Lines	$ / kW (1)	0.633
Regulatory Asset Recovery - Rider #1	$	note (4)
Regulatory Asset Recovery - Rider #2	$	note (4)
Retail Transmission Service Rates (8)(9)(10):		
Network Service Rate (6)	$ / kW	2.42
Line Connection Service Rate (7)	$ / kW	0.73
Transformation Connection Service Rate (7)	$ / kW	1.34
Both Line and Transformation Connection Service Rate (7)	$ / kW	2.07
Wholesale Market Service Rate (9)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (9)	$ / kWh	0.0010

Embedded Local Distribution Company

Facility charge for Shared LV Lines	$ / kW (1)	0.633
Facility charge for connection to Specific LV Lines	$ / km (2)	526
Facility charge for connection to Specific Distribution Lines	$ / km (2)	358
Facility charge for connection to shared high-voltage (≥ 24.9 kV) delivery High Voltage Distribution Station	$ / kW (3)	1.678
Facility charge for connection to shared low-voltage (< 24.9 kV) delivery High Voltage Distribution Station	$ / kW (3)	3.797
Facility charge for connection to shared Low Voltage Distribution Station	$ / kW (3)	2.120
Regulatory Asset Recovery - Rider #1	$	note (5)
Regulatory Asset Recovery - Rider #2	$	note (5)
Retail Transmission Service Rates (8)(9)(10):		
Network Service Rate (6)	$ / kW	2.52
Line Connection Service Rate (7)	$ / kW	0.74
Transformation Connection Service Rate (7)	$ / kW	1.35
Both Line and Transformation Connection Service Rate (7)	$ / kW	2.09
Wholesale Market Service Rate (9)	$ / kWh	0.0052
Rural or Remote Rate Protection Rate (9)	$ / kWh	0.0010

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Direct and Embedded LDC Classes
Effective Date: May 1, 2007

Loss factors

Supply Facilities Loss Factor	1.006
Distribution Loss Factors	
Embedded Delivery Points on Express Feeders	1.000
Embedded Delivery Points on Non-Express Feeders	1.028
Total Loss Factors	
Embedded Delivery Points on Express Feeders	1.006
Embedded Delivery Points on Non-Express Feeders	1.034

For Direct and Embedded LDC customers that are supplied through Express feeders, as defined below, and whom Hydro One requires to move the meter location from inside a Transformer Station (TS) or High Voltage Distribution Station (HVDS) to outside the TS or HVDS, the applicable Supply Facility Loss Factor and the Distribution Loss Factor will be determined for such customers on the basis of an engineering study to arrive at a Site Specific Loss Adjustment (SSLA) for this circumstance, including radial line loss as appropriate, and this calculated value would replace the average Total Loss Factor shown above.
Express feeders are feeders that supply only one customer, either an Embedded Distributor or Embedded Direct, with the meter currently located at the Transformer Station or High Voltage Distribution Station.

Distribution utilities receiving power directly through their own facilities from one of two dedicated High Voltage Distribution Stations (HVDS) which perform a transformation function from 115 kV to 27.6 kV, specifically distribution utilities who receive power from Hydro One Distribution's Vineland HVDS and Hydro One Distribution's Fallow field HVDS, have a Total Loss Factor of: 1.006

NOTES:

Note (1): The basis of the charge is the customer's monthly maximum demand by delivery point embedded in Hydro One Distribution's service territory.

Note (2): The basis of the charge is kilometres of line, within the supplied LDC's service area, supplying solely that LDC.

Note (3): These rates are based on the "non-coincident demand" at each delivery point of the LDC supplied by the station. This is measured as the kW demand at the delivery point at the time in the month of maximum load on the delivery point. For an LDC connected through two or more shared distribution stations, the total charge for the connection to the shared distribution stations is the sum of the relevant charges for each of the distribution stations.

Hydro One Networks Inc.
TARIFF OF RATES AND CHARGES
for the Direct and Embedded LDC Classes
Effective Date: May 1, 2007

Note (4): Regulatory Asset Recovery "Rate Riders" are specific to each Direct.

Note (5): Regulatory Asset Recovery "Rate Riders" are specific to each LDC.

Note (6): The monthly billing determinant for the network service rate is the peak demand from 7 AM to 7 PM (local time) on IESO business days.

Note (7): The monthly billing determinant for the line and transformation connection service rate is the non-coincident peak by delivery point

Note (8): Delivery point with respect to Retail Transmission Rates is defined as the low side of the Transformation Station that steps down voltage from above 50 kV to below 50 kV. For a customer with delivery points served from multiple feeders connected to the same Transformation Station, the aggregated demand at the said delivery points on the low side of the Transformation Station will be the applicable billing determinant.

Note (9): These rates pertain to the IESO's defined point of sale; consequently, appropriate loss factors as approved by the Board and set out in Hydro One Distribution's loss factors must be applied to the metered load of energy-metered customers. Similarly, appropriate loss factors as approved by the Board and set out in Hydro One Distribution's loss factors must be applied to the applicable tariffs of demand-metered customers.

Note (10): The loss factors, and which connection service rates are applied, are determined based on the point at which the distribution utility or customer is connected to Hydro One Distribution's system. Hydro One Distribution's connection agreements with these distribution utilities and customers will establish the appropriate loss factors and connection rates to apply from Hydro One Distribution's tariff schedules.

31	Joint Use for LDCs per pole			$28.61	

MISCELLANEOUS CHARGES RATES

1.0 INTRODUCTION

Miscellaneous Charges are charges for specific services over and above the standard level of service. Each service has an approved fixed rate charged to a customer for a specific activity, or as a penalty, as in the case of late payment charges.

A description of the current services and their proposed 2008 rates can be found in Schedule 11-1 below. The rates for any service not covered in Schedule 11-1 below, but included in the Schedule 11-1 that is part of the 2006 Electricity Distribution Rate Handbook (the Handbook), May 2005 version, have been reviewed and are acceptable to Hydro One Distribution. The description for all services listed in Schedule 11-1 below can be found in either the Handbook, in Exhibit E3, Tab 1, Schedule 1 or in Exhibit D1, Tab 3, Schedule 3.

As required by the Handbook, Schedule 11-1 identifies the basis for determining the proposed rates. Schedule 11-2 details the methodology used to determine the rates not specifically set by the Handbook. The rate of each service is based on average elapsed hours required to carry out the work, as well as burdened labour rates, vehicle costs, and material. Schedule 11-3 summarizes the rates, historical volumes, 2008 forecasted volumes, and 2008 projected revenues/capital contributions for each service.

Schedule 11-1: Specific Service Charges: Standard Amounts

Rate Code	Specific Service Charge - Standard Name	Calculation Method			
		2006 Rate Handbook	Standard Formula	Other Formula	Time and Materials
1	Temporary Service	$500			
2	Dispute Meter Test	$30 plus Measurement Canada fees			
3	Collection of account – no disconnection/load limiter	$30			
4	Collection/Disconnect/load limiter/reconnect (at meter) trip – regular hours	$65			
5	Collection/Disconnect/load limiter/reconnect (at meter) trip – after regular hours	$185			
6	Collection/Disconnect/load limiter/reconnect (at pole) trip – regular hours	$185			
7	Collection/Disconnect/load limiter/reconnect (at pole) trip – after regular hours	$415			
8	Account Set-up Charge	$30			
9	Arrears Certificate	$15			
10	NSF Cheque Charge	$15 + bank charges			
11	Easement Charge for Unregistered Rights	$15			
12	Late Payment Charge	1.5%/month			
13a	Retailer Services – Establishing Service Agreements (refer to Handbook for all charges)	$100/agreement/Retailer +$20/month/Retailer +$0.50/month/customer + other			
13b	Retailer Services – Other (includes Bill Ready for Retailers and Service Transactions Requests) as per the Handbook, Chapter 12	$0.30/month/customer + $0.25/request for request fee + $0.50/request for process fee			
14	Special Meter Reads	$30			
15	Service Layout Fee – Basic		$495		
16	Service Layout Fee – Complex		$690		
17	Crossing Application – Pipeline		$2445		
18	Crossing Application – Water		$3045		
19	Crossing Application – Railroad		$2945		
20	Line Staking – per meter		$3.70

Schedule 11-2b : Specific Service Charges: Other Formula

(a) Sentinel Lights

The proposed rate for sentinel lights has been developed as follows:

Calculation of Revenue Requirement for Sentinel Lights		
Year Ending December 31, 2008		
($ 000's)		
Line No.	**Particulars**	**2008**
1	Mid-Year Rate Base	4,514
	Cost of Service	
2	Operating, maintenance & administrative	2,184
3	Depreciation & amortization	507
4	Capital taxes	13
5	Income taxes	160

Calculation of Revenue Requirement for Sentinel Lights		
Year Ending December 31, 2008		
($ 000's)		
Line No.	**Particulars**	**2008**
6	Cost of service excluding return	2,864
7	Return on capital	309
8	Total revenue requirement	3,173
9	Mid- Year Number of Sentinel Lights	37,341
10	Annual Revenue Requirement per Light	84.97
11	Monthly Charge Per Light	7.10

Calculation of Revenue Requirement for Sentinel Light Poles		
Year Ending December 31, 2008		
($ 000's)		
Line No.	**Particulars**	**2008**
1	Mid-Year Rate Base	932
	Cost of Service	
2	Operating, maintenance & administrative	0
3	Depreciation & amortization	34
4	Capital taxes	2
5	Income taxes	14
6	Cost of service excluding return	50
7	Return on capital	64
8	Total revenue requirement	114
9	Mid- Year Number of Sentinel Light Poles	2,290
10	Annual Revenue Requirement per Light Pole	49.87
11	Monthly Charge Per Light Pole	4.15

(b) Joint Use

The Methodology to determine the Joint Use rate for Telecommunications companies was the one provided by the Ontario Energy Board (OEB) in their March 7, 2005 order for Telecommunications pole rental calculations. In the calculations, a space allocation of 21.9% as directed by the OEB for Telecommunications was used.

Calculation of JU Costs	**OEB Order**
Net Embedded Cost	$ 478.00
Depreciation per Pole	31.11
Interest	54.59
Maintenance (L&F)	7.61
Total Capital Related Costs	$ 93.31
Allocated Capital Cost	$ 20.43
Loss of Productivity	1.23
Administration	0.69
Vegetation Mgmt	0
Total Licensee Cost	**$ 22.35**

No change to the rate is being sought at this time.

The Joint Use attachment rate for LDC’s is a negotiated rate. This rate was agreed upon with the EDA on behalf of the LDC’s and has been in effect for the last 4 years. The methodology used was the same as used for the Telecommunications companies however, the space allocation used was 28.1% given that LDC attachments require more space on a pole due to safety standards. No change is being sought at this time.

Refer to Exhibit E3, Tab 1, Schedule 1 for further information.

Schedule 11-3a: Specific Service Charges: Revenue

Rate Code	Description	Amount	2004 Volume	2005 Volume	2006 Volume	Forecasted 2007 Volume	Forecasted 2008 Volume	2008 Proposed Revenue from approved rates ($)

16	Sentinel Lights Rental Rate per month	$7.10/month	40,603	40,029	38,754	37,812	36,870	$3,173,000
17	Sentinel Lights Pole Rental Rate per month	$4.15/month	2,490	2,513	2,377	2,319	2,261	$114,000
18	Joint Use rate for Telecom Companies per pole	$22.35	234,734	237,623	265,399	272,415	280,588	$6,271,142
19	Joint Use for LDCs per pole	$28.61	7,244	7,295	7,236	9,615	9,903	$283,325

Note: Retail codes 13a and 13b are shown in schedule 11-3a as approved rates only. The revenue generated from these service charges is not included as external revenue but can be found in the RCVA variance account as identified in Exhibit F1, Tab1, Schedule 2.

Schedule 11-3b: Specific Service Charges: Capital Contributions

Rate Code	Description	Amount	2004 Volume	2005 Volume	2006 Volume	2007 Volume	2008 Volume	2008 Proposed Capital Contributions based on approved rates ($)
1	Temporary Service	$500	211	211	211	211	211	$105,500
2	Service Layout Fee – Basic	$495	232	264	264	260	260	$128,700
3	Service Layout Fee – Complex	$690	8	N/A	N/A	10	10	$6,900
4	Crossing Application – Pipeline	$2445	4	4	2	10	10	$24,450
5	Crossing Application – Water	$3045	135	111	81	100	100	$304,500
6	Crossing Application – Railroad	$2945	16	27	8	20	20	$58,900
7	Line Staking – per meter	$3.70	289	241	205	200	200	$740
8	Central Metering – New service < 45 kW	$115	1095	1095	1095	950	950	$109,250
9	Conversion to Central Metering < 45 kW	$915	792	792	792	800	800	$732,000
10	Conversion to Central Metering > 45 kW	$800	126	126	126	150	150	$120,000

Note: “N/A” in schedule 3 infers that the data is not tracked and hence not available.

TERMS AND CONDITIONS

1.0 INTRODUCTION

This exhibit will provide evidence with respect to Hydro One Distribution's terms and conditions of service for distribution-connected customers. As required under Section 2.4 of the Distribution System Code ("Code"), Hydro One Distribution has documented its Conditions of Service that describe its operating practices and connection policies. All of the components of the Conditions of Service as outlined in Section 2.4 are covered, as well as additional important information.

Our Conditions of Service is publicly available, and a brochure summarizing terms is sent to all new customers at the time of connection and to all existing customers annually.

This filed copy of our Conditions of Service is recently updated to incorporate relevant Code changes and new industry initiatives. Updates incorporate terms related to the Regulated Price Plan, connection of embedded Generators, and the Renewable Energy Standard Offer Program. Further updates to reflect the implementation of smart meters and time-of-use rates will be required at such time as those programs are finalized. In addition, sections of the document have been rewritten or consolidated for better clarity and ease of use, for example items related to the rights and obligations of Customers are grouped to one section, and a new section on tingle and stray voltage is included.

Hydro One is providing notice to customers of the changes to Hydro One's Conditions of Service, and these terms will then be effective March 1, 2008.

Appendix A is the updated Conditions of Service for Hydro One Distribution Customers.

Hydro One Networks Inc.
Distribution Customers

Conditions of Service

OCTOBER 2007

Table of Contents

SECTION 1 INTRODUCTION

These Conditions of Service describe Hydro One Networks Inc.'s ("Hydro One") operating practices and connection policies and set out the terms and conditions upon which Hydro One offers and the Customer accepts Distribution Services.

Terms contained in these Conditions of Service or in any contract for the supply of electricity by Hydro One shall not prejudice or affect any rights, privileges, or powers vested in Hydro One by law under any federal or Ontario statute or any regulations thereunder.

The definitions of terms used in these Conditions of Service appear in section 4.0. Capitalized expressions used in these Conditions of Service have the meaning ascribed in that section.

1.1. Identification of Distributor and Service Area

Hydro One is a corporation incorporated under Ontario's *Business Corporations Act* and an electricity Distributor licensed by the OEB to distribute electricity in the service area described in Hydro One's Distribution Licence, ED-2003-0043 (the "Licence"). Hydro One's service area may be changed from time to time by the OEB.

Details of the Licence may be viewed at www.HydroOneNetworks.com.

1.2. Related Codes and Governing Laws

Hydro One and the Customer shall comply with all Applicable Laws, including the provisions of the latest editions of the following documents:

(i) *Electricity Act;*
(ii) *Ontario Energy Board Act;*
(iii) the Licence;
(iv) Affiliate Relationships Code for Electricity Distributors and Transmitters;
(v) Distribution System Code;
(vi) Retail Settlement Code;
(vii) Standard Supply Service Code; and
(viii) Relevant Rate Orders.

If there is a conflict between these Conditions of Service and any of the above, the documents listed above shall govern in order of priority indicated above. If there is a conflict between these Conditions of Service and a Connection Agreement executed by the Customer and Hydro One; the Connection Agreement shall govern. The fact that a condition, right, obligation, or other term appears in these

Conditions of Service but not in any of the documents listed above or in a Connection Agreement shall not be interpreted as a conflict or be deemed grounds for finding a conflict.

Customers and their agents planning and designing for electricity service must refer to all applicable provincial and Canadian electrical codes and all applicable federal, provincial, and municipal laws, regulations, codes and by-laws to ensure compliance with their requirements. All work shall be conducted in accordance with the latest edition of Ontario's *Occupational Health and Safety Act* (OHSA) and, where applicable, the Regulations for Construction Projects and the harmonized Electrical and Utility Safety Association (E & USA) Rule Book.

1.3. Interpretations

In these Conditions of Service:

(i) the singular includes the plural and vice versa;
(ii) the use of one gender includes the other;
(iii) the word "person" includes not only a natural person but also a firm, a body corporate, an unincorporated association and an authority;
(iv) the word "its" may mean "his", "her" or "their";
(v) the words "including", "include(s)" and "included" shall be interpreted as being without limitation;
(vi) a reference to a person includes a reference to the person's heirs, executors, administrators, successors, substitutes (including, but not limited to, persons taking by novation) and assigns;
(vii) an agreement, representation or warranty on the part of or in favour of two or more persons binds or is for the benefit of them jointly and severally;
(viii) specified periods of time refer to business days, and the number of days from a given day or the day of an act or event is to be calculated exclusive of the given day or day of the act or event; and
(ix) a reference to a day is to be interpreted as the period of time commencing at midnight and ending 24 hours later and does not include weekends and Public Holidays.

1.4. Amendments and Changes

The provisions of these Conditions of Service and any amendments made from time to time form part of the contract between Hydro One and any connected Customer, Retailer, or Generator, and these Conditions of Service supersede all previous Conditions of Service, oral or written, of Hydro One and any of its predecessor municipal electric utilities as of the effective date (Section 1.7 J) of these Conditions of Service.

In the event of changes to these Conditions of Service, Hydro One will issue an advance public notice with the Customer's bill as per Section 2.4.8 of the Distribution System Code. Customers will have ten (10) days, from receipt of the notification, to provide comments through the contacts identified in the public notice.

The Customer is responsible for contacting Hydro One to obtain the current version of these Conditions of Service. Hydro One may charge a reasonable fee for providing the Customer with a copy of these Conditions of Service. The current version of the Conditions of Service is posted on the Hydro One Web site and may be downloaded from: www.HydroOneNetworks.com.

1.5. Contact Information

For general inquiries, Hydro One can be reached during its normal business hours: Monday to Friday from 7:30 am to 8 pm. E.T. at 1-888-664-9376, by e-mail at CustomerCommunications@HydroOneNetworks.com or by writing to:

Hydro One Networks Inc.
P.O. Box 5700
Markham, Ontario
L3R 1C8

For emergency purposes, Customers can call Hydro One at 1-800-434-1235, twenty four (24) hours per day, seven (7) days per week, or the number shown on the Customer's bill.

1.6. Customer Rights and Obligations

A. Accuracy of Information

Customers have the obligation to provide Hydro One with information that is true, complete, and correct. The information is used to provide Customer service, deliver and/or supply energy, manage Customer accounts and assess credit history regarding the need for a security deposit. Hydro One may verify the accuracy of all information provided and may obtain additional credit information from a credit-reporting agency as required. If Hydro One is unable to establish the identity of the Customer based upon the information provided by the Customer, Hydro One may disconnect the Customer in accordance with Section 2.2 of these Conditions of Service.

B. Space and Access

The Customer shall provide Hydro One, free of charge or rent, with a convenient and safe place for Hydro One's Facilities and Equipment, for example, a meter, on the Customer’s premises. Hydro One assumes no risk thereby and under no circumstances will Hydro One be liable for any damages resulting from, arising out of or related to the presence of the Hydro One Facilities and Equipment.

The Customer shall not allow anyone other than an employee, or authorized agent of Hydro One, or a person lawfully entitled to do so, to repair, remove, replace, alter, inspect or tamper with the Hydro One Facilities and Equipment on the Customer’s premises.

In addition to Hydro One’s rights under Section 40 of the *Electricity Act*, Hydro One employees and Hydro One’s authorized agents may enter the Customer’s property at any time for any of the following purposes:

(i) install, inspect, read, calibrate, maintain, repair, alter, remove, or replace a meter;

(ii) inspect, maintain, repair, alter, remove, replace, or disconnect wires or other facilities used to transmit or Distribute electricity;

(iii) inspect, maintain, repair, alter, remove, and replace Hydro One Facilities and Equipment, such as sentinel lights; and

(iv) perform switching operations or interrupt the Customer’s supply to maintain or improve the supply system or to provide new or upgraded services to other Customers.

Hydro One will use reasonable efforts to exercise this power of entry during normal business hours. The Hydro One employee or authorized agent exercising this power of entry will identify himself with proper identification upon request.

Where Hydro One has requested key access for meters or meter rooms inside the Customer’s premises, key access shall be provided to Hydro One. Any exceptions to this requirement are subject to Hydro One’s written approval. Hydro One may require that a Customer relocate an inaccessible meter to an accessible location at the Customer’s expense.

C. Customer Equipment

The Customer is responsible for installation and maintenance of Customer Equipment, including vegetation maintenance around the Customer’s power lines. Customer Equipment includes, but is not limited to, power lines, poles and the base of the meter.

The Customer is responsible for ensuring that all Customer Equipment complies with all Applicable Laws, including, but not limited to, the Electrical Safety Code and is properly identified and connected for metering and operation purposes. Where applicable, Customer Equipment shall be subject to the reasonable acceptance of Hydro One and the approval of the Electrical Safety Authority. Hydro One’s approval of any Customer Equipment is solely for the purposes of Hydro One’s protection of the Distribution System. The Customer is solely responsible for protecting its own property.

The Customer shall inspect the Customer Equipment at regular intervals. Clearances must conform to the Electrical Safety Code. The Customer shall repair or replace, in a timely fashion, any Customer Equipment, including, but not limited to, poles and transformer pads, that may affect the safety, integrity or reliability of the Distribution System. If the Customer does not take such action within the time specified by Hydro One, Hydro One may disconnect the supply of power to the Customer. Hydro One’s policies and procedures with respect to the disconnection process are further described in these Conditions of Service.

If the Customer does not carry out its repairs within a reasonable time, or the repairs are not considered adequate by Hydro One or an inspection authority, Hydro One may disconnect the supply of electricity to the Customer and/or carry out the repairs at the Customer's expense, and Hydro One shall not be liable to the Customer for any damages arising as a result thereof, other than physical damage to the Customer Equipment arising directly from entry on the Customer’s property.

D. Tree and Vegetation Management

Subject to any prior agreements, Customers are responsible for all initial and continuing tree trimming, tree and brush removal for all new and existing Secondary Services, Primary Services, and Sub-transmission Services on a Customer’s property. Clearances must conform to the Electrical Safety Code. For distribution or sub-transmission lines built by the Customer, and where ownership is to be transferred to Hydro One upon Connection, the clearances must conform to Distribution Standards. Hydro One strongly recommends that a certified utility arborist or a qualified electrical contractor be hired for this work. Refer to Section 2.1.2 E for sources.

E. No Charge Outage for Upgrade or Maintenance of Customer Equipment for Safety Reasons

Hydro One will, upon at least ten (10) days’ prior notice from the Customer, once each year during normal business hours, disconnect and reconnect the Customer’s service without charge, for the Customer to upgrade or maintain Customer Equipment for safety reasons, including, but not limited to, the safe clearance of trees and vegetation from Customer lines.

F. Responsibility for Damage to Hydro One Facilities and Equipment

Hydro One Facilities and Equipment located on the Customer’s premises are in the care of and at the risk of the Customer. If any of Hydro One’s Facilities and

Equipment are damaged or destroyed by fire or any other cause other than ordinary wear and tear, the Customer shall pay Hydro One either, at Hydro One's sole discretion, the value of said Hydro One Facilities and Equipment or the cost of repairing or replacing same.

The Customer shall not build, or cause to be built, plant or maintain any structure, tree, shrub or landscaping that would or could obstruct or endanger any Hydro One Facilities and Equipment, interfere with the proper and safe operation of the Distribution System or any part thereof or affect Hydro One's compliance with any Applicable Laws. If the Customer does not remove the structure, tree, shrub or landscaping that would or could obstruct or endanger any Hydro One Facilities and Equipment, interfere with the proper and safe operation of the Distribution System or any part thereof or affect Hydro One's compliance with any Applicable Laws, Hydro One may disconnect the supply of electricity to the Customer and/or carry out the removal at the Customer's expense, and Hydro One shall not be liable to the Customer for any damages arising as a result thereof, other than physical damage arising directly from entry on the Customer's property.

G. Indemnity for Generation Facilities

The Customer shall indemnify and hold harmless Hydro One, its directors, officers, employees and authorized agents from any claims made by any third parties, related to the construction, installation, or Connection of a Generation Facility by or on behalf of the Customer or located on the Customer's property.

H. Testing Customer's Load

The Customer shall allow Hydro One to install and use meters and other equipment to conduct tests to determine the electrical characteristics of the Customer's load.

I. Automatic Reclosing Facilities

In order to restore the Distribution System, Hydro One installs facilities for automatic reclosing of circuit breakers and reclosers, and from time to time may change the reclosing time of any such reclosing facilities. The Customer shall be responsible for providing at his own expense:

(a) adequate protective equipment for any electrical apparatus which might be adversely affected by reclosing facilities; and

(b) such equipment as may be required for the proper reconnection of any apparatus or equipment of the Customer, without adversely affecting the proper functioning of the reclosing facilities.

J. Registration/Deregistration as a Wholesale Market Participant

In order for Hydro One to make the necessary changes to its billing systems, Customers who wish to register or de-register with the Independent Electricity System Operator (IESO) as a Wholesale Market Participant shall notify Hydro One in writing at least sixty (60) days in advance and complete the necessary documentation.

K. Accounts with more than one Person

If an account is opened in more than one person's name, all such persons are Customers and are jointly and severally responsible for compliance with these Conditions of Service and to pay the Rates and charges in accordance with these Conditions of Service.

1.7. Hydro One's Distributor Rights

A. Access to Customer Property

Hydro One shall have access to Customer's property in accordance with section 40 of the *Electricity Act.*

B. Tree and Vegetation Management and Removal of Obstructions

To ensure public safety and the continued reliable operation of the Distribution System Hydro One maintains its rights of way on a continued and cyclical basis. The timing of this periodic re-clearing of existing rights of way is determined by system assessments, rights of way limitations, storm damage, diseased trees, and vegetation type. Re-clearing of rights of way typically affects trees and vegetation on private property. Hydro One will notify and discuss the planned re-clearing of existing rights of way with property owners prior to performing the work in order to mitigate the impacts to the environment and the property. However, in the event of emergencies, Hydro One may be unable to notify the property owner prior to performing the work.

In any event, pursuant to subsection 40(4) of the *Electricity Act*, Hydro One may enter any land for the purpose of cutting down or removing trees, branches or other obstructions, if in the opinion of Hydro One, it is necessary to do so to maintain the safe and reliable operation of the Distribution System.

1.8. Disputes

Initial contacts for Customer complaints should be made by calling Hydro One at 1-888-664-9376 during normal business hours, Monday to Friday from 7:30 a.m. to 8 p.m. E.T. Customer complaints that cannot be resolved by calling this number will be escalated to Hydro One's Customer Relations Centre (CRC), which will serve as the primary point of contact with Hydro One. A member of the CRC will make contact with the Customer, coordinate internal complaint activities, research, investigate, and follow up (when necessary) on the complaint to ensure resolution and closure.

In the event that issues cannot be resolved between Hydro One and the Customer, complaints can be escalated to a third party complaints resolution service provider approved by the OEB. Until such time as the OEB approves an independent third party, the OEB will assume this role.

1.9. Liability

Hydro One shall be liable to a Customer and a Customer shall be liable to Hydro One only for any damages that arise directly out of the willful misconduct or negligence of:

(i) Hydro One in providing Distribution Services to the Customer;
(ii) the Customer in being connected to the Distribution System; or
(iii) Hydro One or the Customer in meeting their respective obligations or exercising their respective rights under these Conditions of Service, their licences and any other Applicable Laws.

Notwithstanding the above, neither Hydro One nor the Customer shall be liable under any circumstances whatsoever for any loss of profits or revenues, business interruption losses, loss of contract or loss of goodwill, or for any indirect, consequential, incidental or special damages, including but not limited to punitive or exemplary damages, whether any of the said liability, loss or damages arise in contract, tort or otherwise.

1.10. Force Majeure

Other than for any amounts due and payable by the Customer to Hydro One or by Hydro One to the Customer, neither Hydro One nor the Customer shall be deemed to have committed an event of default in respect of any obligation under these Conditions of Service if prevented from performing that obligation, in whole or in part, because of a Force Majeure Event.

Hydro One shall not be liable for any delay or failure in the performance of any of its obligations under these Conditions of Service due to any Force Majeure Event.

If a Force Majeure Event prevents either party from performing any of its obligations under these Conditions of Service, that party shall:

(i) other than for Force Majeure Events related to Acts of God, promptly notify the other party of the Force Majeure Event and a good faith assessment of the effect that the event will have on the former party's ability to perform any of its obligations. If the immediate notice is not in writing, it shall be confirmed in writing as soon as reasonably practical;

(ii) not be entitled to suspend performance of any of its obligations under these Conditions of Service to any greater extent or for any longer time than the Force Majeure Event requires it to do;

(iii) use its best efforts to mitigate the effects of the Force Majeure Event, remedy its inability to perform, and resume full performance of its obligations;

(iv) keep the other party continually informed of its efforts; and

(v) other than for Force Majeure Events related to Acts of God, provide written notice to the other party when it resumes performance of any obligations affected by the Force Majeure Event; and

(vi) if the Force Majeure Event is a strike, lockout or other labour dispute involving Hydro One's employees or authorized agents, Hydro One shall be entitled to discharge its obligations to notify its Customers in writing by means of placing a notice in the local newspaper, and, notwithstanding (iii) above, the settlement of any strike, lockout or labour dispute involving Hydro One's employees or authorized agents shall be within the sole discretion of Hydro One or its authorized agents, none of whom shall be under any of the obligations in (iii) above.

1.11. Coming Into Force

These Conditions of Service are effective as of March 1, 2008.

SECTION 2 DISTRIBUTION ACTIVITIES – GENERAL

A. Cable Locates

Upon request, Hydro One will locate, if able, all secondary and primary underground cables without charge. Cables installed on private property will be located at no charge to the Customer up to the point where the Customer or the Customer's contractor can safely isolate the balance of the service. If Hydro One is unable to locate an underground cable, Hydro One will provide a service disconnection and reconnection during normal working hours without charge. Hydro One will charge for underground cable locates outside normal business hours, other than in an Emergency situation.

B. Fault Locates and Repairs

Hydro One will normally locate and repair faults on all Hydro One-owned service cables without charge. In the event that a fault and/or damage is caused by the Customer or third party, the costs of repair shall be paid by the party responsible.

In the event that structures, pavement, or landscaping make the cable inaccessible for repair, the Customer shall provide all civil work, supports, vegetation and landscaping associated with any repair or replacement of the failed cable.

C. Motors and Welders

The maximum acceptable rating for a motor or combination of motors that may be started simultaneously at full voltage across the line is:

Voltage Level	Maximum Rating
120 V	2 HP
240 V	4 HP
120/208 V	6 HP
347/600 V	8 HP

Where the simultaneous motor load is more than allowable for simultaneous starting at full voltage across the line, the Customer shall use reduced-voltage starters that are acceptable to Hydro One.

Motors and welders in excess of the following thresholds are subject to approval by Hydro One.

- Welder size exceeds 30 kVA
- Motor size exceeds the following levels:

Voltage Level	1-phase motor	3-phase motor
16/27.6 kV	> 20 hp	> 100 hp
Below 16/27.6 kV	> 10 hp	> 25 hp

2.1. Connections

A. Early Consultation

The Customer shall submit to Hydro One, well in advance of commencement of construction, the following information:

(i) required in-service date;
(ii) service entrance capacity and voltage rating of the service entrance equipment;
(iii) detailed information on heating equipment, air conditioners and any other appliances and/or equipment that demands a high consumption of electrical energy;
(iv) detailed information, as per application forms for the connection of a Generation Facility, for all generators being connected in parallel with the Distribution System;
(v) survey plan or site plan, at the request of Hydro One indicating the proposed location of the service entrance equipment with respect to public rights-of-way and property lot lines;
(vi) all information required to set up an account for billing purposes; and
(vii) additional information as noted on the Hydro One Web site at www.HydroOneNetworks.com or specified by Hydro One, in writing.

B. Common Service Taps

Standard Customers shall provide, at their expense and in compliance with the Electrical Safety Code, a secondary or primary pole or an underground primary voltage line, for common service taps. Hydro One will supply two neighbouring

Standard Customers from the same Customer-supplied facility (common service taps) only when the following conditions are met:

(i) the Standard Customers and Hydro One agree on the location of the portion of the Standard Customer's supplied and built facility to be owned by Hydro One ("Common Line");
(ii) the Common Line is located on property owned by one or both of the neighbouring Standard Customers;
(iii) the Common Line to be owned by Hydro One is built to Hydro One's Distribution Standards; and
(iv) the Common Line is transferred with easements and tree-clearing rights to Hydro One for a nominal fee.

If all the above conditions cannot be met, each Customer shall supply, install, and own a separate line on its own property.

C. Temporary Connections

If a Customer requires temporary service, the two types and applicable charges are as follows:

(i) temporary service that at a later date is to be relocated to a permanent service site: a standard temporary service fee is charged;
(ii) temporary service that has a finite Connection and cancellation time period, for example, service to construction sites: The material cost of the transformation and metering will be provided by Hydro One without charge. All other labour and material costs to install and remove the service will be paid by the Customer based on Hydro One's actual costs.

D. Sub-transmission Service – Exclusive of Embedded Distributor

Sub-transmission Service may be a Basic Connection or an Expansion. However, transformation, conductor or a credit for conductor is not provided by Hydro One. A MIST Meter is required for all new Sub-transmission Customers with an average estimated load exceeding 200 kilowatt ("kW") annually, and the Sub-transmission Customer shall contribute to the cost, such contribution to be determined by Hydro One using a discounted cash flow model in compliance with Appendix B of the Distribution System Code.

E. Large Users and Direct Customers

Transformation and conductor are not provided for Large Users and Direct Customers. A MIST Meter is required for all Connections and is provided either by the Large User and Direct Customer or by Hydro One, in which latter case the

Large User and Direct Customer shall contribute to the cost, such contribution to be determined by Hydro One using a discounted cash flow model in compliance with Appendix B of the Distribution System Code.

F. Embedded Distributor

Transformation and conductor are not provided for an Embedded Distributor. A MIST Meter is required for all Connections and is provided either by the Embedded Distributor or by Hydro One, in which latter case the Embedded Distributor shall contribute to the cost, such contribution to be determined by Hydro One using a discounted cash flow model in compliance with Appendix B of the Distribution System Code.

G. Central Metered Services

At the request of a Customer, Hydro One may, at its discretion, supply a Single-Phase Standard Customer with a central metering service to two or more buildings. The Standard Customer shall:

(i) pay the difference between the cost of the central metering and the meter that Hydro One would have provided to the Standard Customer under the Standard Supply Code;
(ii) comply strictly with the Electrical Safety Code and Hydro One's Distribution Standards;
(iii) have an appropriately sized main disconnect and equipment for each service connected to the central metering service; and
(iv) supply and install, at its own expense, all conductor, poles, and underground conductor, as required on its private property.

The maximum number of services to be connected at the central metering point is four. Additional services must be connected downstream of the central metering point.

Where Hydro One requires that a Customer install the central metering, the costs set out in Section 2.3.7 shall apply.

H. Primary Metered Services

When a Customer requests a Primary Metered Service (connected at the primary voltage level) or the design of the layout makes secondary metering impractical, the Customer shall install, own, and maintain, at its own expense, the entire distribution system required downstream from the metering point, including conductors, poles, and transformation. Customers requiring non-standard secondary voltages are responsible for the incremental cost of primary metering over the cost of the non-standard secondary metering.

Secondary metering is considered practical when the Customer's entire load can be metered on the secondary side of the transformation.

I. Travel Trailer Parks (Intermittent/Seasonal Use)

The park authority/owner will provide, own, and maintain all Distribution facilities, including transformers and individual metering as required, within the park boundary. Such facilities will be subject to the approval of the Electrical Safety Authority. All electricity supplied for park services will be combined and billed under one General Service account. If secondary metering is not practical, a Primary Metered Service will be required at or near the park property limit.

Notwithstanding the foregoing, for existing parks where Hydro One owns, as of the date of these Conditions of Service, the transformers on the Customer's Distribution line and the secondary metering within the park boundary, Hydro One will continue to own these facilities provided that no new services are added.

When the park owner requests an increase in the size of the services, additional services within the park or such additional services are required, the following conditions shall apply:

(i) the park owner will, subject to OEB approval, purchase the existing Distribution facilities owned by Hydro One within the park boundary ("Existing Park Facilities"). If the park owner does not purchase the Existing Park Facilities, the park owner may choose to replace the Existing Park Facilities at its own expense and will own the new facilities;

(ii) the park owner shall supply and install new Distribution facilities including transformers, etc., as required for the addition;

(iii) Hydro One shall remove existing secondary metering, install a primary metering unit at or near the Customer's property limit without charge, and consolidate existing contracts into one General Service account;

(iv) park owners of privately-owned systems shall meet all the requirements of the Electrical Safety Authority.

J. Trailer Parks Other than Travel Trailer Parks

Parks with mobile homes will be treated as a subdivision, with Hydro One taking ownership of the primary distribution system only under the following conditions:

i) there is a registered plan of subdivision;

ii) construction is to Hydro One's design standards; and

iii) easements and cutting rights are granted to Hydro One for all primary lines.

Ownership of the primary distribution system will be the park owner's responsibility in all other cases.

K. Service and Supply Locations

Hydro One reserves the right to determine the service supply and Connection locations. The Customer shall obtain Hydro One's approval prior to the construction of electrical facilities.

One service layout or estimate is normally provided without charge. The Customer shall pay a fee to Hydro One if the Customer changes any of its Connection requirements after the initial layout or estimate is provided or the Customer requests another estimate or layout for the same Connection.

L. Number of Delivery Points

Normally Hydro One permits only one Delivery Point per property. Where it is not technically or financially feasible to have only one Delivery Point, Hydro One may, in its sole discretion, connect additional Delivery Point(s) on the same property. Each Delivery Point must be separately metered and billed at the appropriate rate classification.

M. Delivery Point Capacity

The maximum size of Primary Service or Secondary Service at any Delivery Point is as follows:

(i) for a Single Phase Customer Connection: 167 kVA of transformation capacity, Customers that require service above 167 kVA must either install or convert to a three-phase service

(ii) for a Three Phase Customer Connection:

a) if the Distribution voltage is 13 kV or less: 501 kVA of transformation capacity

b) if the Distribution voltage is above 13 kV or a subtransmission system is not present (e.g. the Distribution Network is supplied from a Distribution Station that is directly connected to a high voltage Transmission Line), the maximum size is determined by Hydro One based on system configuration and capability.

N. Transformation - Overhead Transformers

The maximum overhead transformer sizes for standard secondary voltages provided by Hydro One are:

(i) for a Single Phase overhead Standard Customer Connection: 167 kVA;
(ii) for a Three Phase Standard Customer Connection: 501 kVA.

Customers requiring non-standard secondary voltages will be responsible for installing, owning, maintaining and operating their own transformer.

O. Transformation - Pad- Mounted Transformers (underground type)

Maximum transformer sizes supplied by Hydro One are:

(i) for Single Phase Standard Customer Connection: 150 kVA
(ii) for a Three Phase Standard Customer Connection: 500 kVA (Y-Y)

Standard Customers requesting underground pad-mounted type transformers will pay the difference in material and installation costs between the overhead installation and the underground installation, and will supply and install at the Standard Customer's expense an appropriate transformer pad. The Customer should contact Hydro One for further information on transformer pads.

Standard Customers may install their own pad-mounted transformer larger than 500 kVA and will be entitled to a Customer-owned transformation allowance. Customer-owned transformers shall be properly sized, acceptable to Hydro One and meet the energy efficiency standards in CSA C802.1.

At the Customer's request, Hydro One may install, own and maintain transformer installations of 750 kVA and 1000 kVA, 27.6 kV – 347/600 V, Y-Y and the Customer shall contribute 100 per cent of Hydro One's actual costs. The Customer will not receive a Customer-supplied transformation allowance.

Customers requiring non-standard secondary voltages will be responsible for installing, owning, maintaining and operating their own transformer.

P. Transformation - Station Transformers

Where Customers require transformation capacity in excess of the sizes noted above, the Customer shall supply the station site, pad, transformers, fencing, structure, and distribution line on Private Property in accordance with the Electrical Safety Code. Customer-owned transformers shall be properly sized, acceptable to Hydro One and meet the energy efficiency standards in CSA C802.1

The high voltage protection of a Customer supplied and owned transformer(s) shall co-ordinate with the Distribution System protection.

An appropriate transformation ownership allowance shall be applied, as approved by the OEB. Hydro One does not supply live bushing (station type) transformers for new Connections.

Existing Hydro One-owned station type transformers serving a Customer will be maintained to the end of their useful life. At the end of the useful life, the Customer will supply, install, own, and maintain the replacement unit.

Q. Transformation - Additional Station Transformers

In the event that additional transformation is required due to load growth, and Hydro One owns the original transformer, Customers have two options:

(i) purchase Hydro One's transformer and switchgear and add additional transformation; or
(ii) if mutually agreeable, pay Hydro One the actual costs of installing the additional transformation, in which case Hydro One would continue to own, maintain, and replace the transformer as needed.

The Customer will supply all other associated material and perform any other work required to accommodate the additional transformation, at its own expense.

R. Types of Connections

The two types of Connections to the Distribution System are:

(i) Basic Connection; and
(ii) an Expansion.

2.1.1. Basic Connection (Building that Lies Along)

The terms below may also apply to Customers requiring a service capacity increase.

Where a Customer makes a written request to Hydro One to connect a Building that Lies Along Hydro One's Distribution System, Hydro One shall provide a Connection. Hydro One provides a Basic Connection at no charge. The Basic Connection consists of:

(i) supply and installation of standard overhead transformation, according to the Customer's rate class, which includes secondary bus extensions or installations complete with conductor and anchoring;

(ii) supply and installation of standard metering;
(iii) an estimate and layout for the new service;
(iv) connection of the Secondary or Primary Service at the described Ownership Demarcation Point and the Operational Demarcation Point; and
(v) for year-round residential and seasonal residential classes only, the supply and installation of up to 30 metres overhead secondary conductor for up to a 200 amp service, or an equivalent credit toward underground conductor. Year-round residential and seasonal residential Customers with Primary Services will be credited for the 30 meters of secondary wire.

A Basic Connection does not include the following additional costs, for which the Customer shall pay Hydro One:

(a) for year-round residential and seasonal residential Customer classes – the cost difference between overhead and underground secondary wire;
(b) incremental costs associated with the supply and installation of underground transformation;
(c) the supply and installation of poles, anchors, all secondary conductor over 30 metres, hardware, and structures, as required on Customer's property; and
(d) the costs of all changes required to the Distribution System exclusive of the secondary bus installation. These costs include pole changes, anchoring or hardware changes.

Where applicable and at their own expense, Customers will also be responsible for:

(e) the supply of tree and vegetation management on the Customer's property;
(f) any easements or property agreements as required by Hydro One;
(g) the cost of any fees, permits, or other permissions required to connect the service; and
(h) the amount payable by the Customer to Hydro One if the Customer is being added to a Single or Three Phase line constructed on or after January 1, 1993.

2.1.2. Expansions / Offer to Connect

Where a Customer makes a written request to Hydro One to connect a building that is in Hydro One's service territory, Hydro One shall make an "Offer to Connect". For an Expansion, Hydro One will perform an economic evaluation using a discounted cash flow model in compliance with Appendix B of the Distribution System Code to determine the Customer's share, if any, of the equipment, labour, material and ongoing maintenance costs of the Expansion (the "Expansion Costs").

If the Present Value of the future revenue is not sufficient to recover the Expansion Costs, the Customer shall pay a capital contribution calculated in a manner consistent with the requirements of the Distribution System Code. The capital contribution shall not exceed the Customer's share of the difference between the Present Value of the Expansion Costs and the Present Value of the projected revenue.

When performing the economic evaluation, Hydro One will estimate the Customer's monthly consumption based on information provided by the Customer. Where available, Customer-supplied load forecasts acceptable to Hydro One will be used.

For Customers requesting a service capacity increase which requires an Expansion of the Distribution System, an economic evaluation will also be performed, using a discounted cash flow model in compliance with Appendix B of the Distribution System Code to determine the Customer's contribution amount.

A. Revenue Horizon

Hydro One uses a revenue horizon of up to twenty-five (25) years to project expected forecasted revenues based on the forecasted load from the Expansion. The load forecast and the revenue horizon used for the economic evaluation are in the sole discretion of Hydro One.

B. Connection and Cost Recovery Agreement/Revenue Guarantee

For an Expansion where Hydro One is making an investment of $75,000.00 or more in the Distribution System, the Customer may be required to execute a Connection and Cost Recovery Agreement, which includes a revenue guarantee. Key provisions of this agreement are described in Appendix "A" to these Conditions of Service.

C. Staking and Engineering Fees

Hydro One will provide staking and design at the Customer's expense. This payment will be recognized in the discounted cash flow calculation.

D. Offer to Connect

Hydro One will respond to requests for Connection within the following timeframes:

(i) from Standard Customers, Sub-transmission Customers, Large Users and Direct Customers, by no later than 15 calendar days after receipt of the request. At this time, Hydro One will specify any information that must be provided and any obligations that must be met, by the Customer in order for Hydro One to process the request. An offer to connect will be made by no later than 60 calendar days following Hydro One's receipt of all necessary information and the Customer's meeting of all its obligations.

(ii) from Embedded Distributors, by no later than 30 calendar days after receipt of a request. At this time, Hydro One will specify any information that must be provided and any obligations that must be met, by the Customer in order for Hydro One to process the request. An offer to connect will be made by no later than 90 calendar days following Hydro One's receipt of all necessary information and the Customer meeting all of its obligations.

Hydro One's initial "offer to connect" will include, at no cost to the Customer:

(a) a statement as to whether the offer is a firm offer or is an estimate of the costs that would be revised in the future to reflect actual costs incurred;
(b) a reference to these Conditions of Service and information on how the Customer requesting Connection may obtain a copy of them;
(c) a statement as to whether a capital contribution will be required from a Customer;
(d) a statement as to whether Hydro One will require an Expansion deposit from the Customer, and the amount of the Expansion deposit that the Customer will have to provide;
(e) a description of the Connection charges that would apply and a statement whether they will be charged separately from the capital contribution, and, if known, the amount of those connection charges;
(f) the amounts to be paid by the Customer to Hydro One if the Customer is being added to a Single or Three Phase line constructed on or after January 1, 1993; and
(g) any additional information pertinent to the offer.

If Hydro One will require a Customer to pay a capital contribution, Hydro One will, in addition to complying with the above, also include in its initial offer, at no cost to the Customer:

a) the amount of the capital contribution that the Customer will have to pay for the Expansion;
b) the calculation used to determine the amount of the capital contribution to be paid by the Customer, including all of the assumptions and inputs used to produce the economic evaluation as described in these Conditions of Service;
c) a statement as to whether the offer includes work for which the Customer may obtain an alternative bid and, if so, the process by which the Customer may obtain the alternative bid;

d) a description of, and costs for, the contestable work and the uncontestable work associated with the Expansion, broken down into the following categories:

   i) labour (including design, engineering and construction);
   ii) materials;
   iii) equipment; and
   iv) overhead (including administration);

e) an amount for any additional costs that will occur as a result of the alternative bid option being chosen (including, but not limited to, inspection costs);
f) if the offer is for a residential Customer, a description of, and the amount for, the cost of the basic connection that has been factored into the economic evaluation; and
g) if the offer is for a non-residential Customer and if Hydro One has chosen to recover the non-residential basic connection charge as part of its revenue requirement, a description of, and the amount for, the connection charges that have been factored into the economic evaluation.

E. Alternative Bids

Customers may seek alternative bids for the contestable portion of the Expansion from Qualified Contractors where the Expansion requires a capital contribution to be made by the Customer.

Information on electrical contractors is available from the following sources:

- Yellow Pages under Electric Contractors
- www.ECAO.org under Visitor area and Contractor Locator
- www.yellowpages.ca under Electric Contractors

E.1. Uncontestable work excluded from alternative bids include:

(i) the preliminary planning, design and engineering specifications of the work required for the Distribution System expansion and connection; and
(ii) the construction work on existing Hydro One Facilities and Equipment.

E.2. The Customer shall be responsible for:

(i) selecting, hiring, and paying the Qualified Contractor the costs for the work eligible for the alternative bid;
(ii) assuming full responsibility for the construction of that aspect of the Expansion;

(iii) administering the contract or paying Hydro One to perform this service, at time and material rates. Administering the contract includes acquisition of all required permissions, permits, and property rights as required;
(iv) constructing the Expansion (line extension) to meet Hydro One's design requirements;
(v) paying an inspection fee to Hydro One for inspection of the construction;
(vi) paying the cost of any easements or property agreements as required by Hydro One;
(vii) transferring ownership of the facilities built on public property or servicing more than one Customer to Hydro One for a nominal fee prior to connection;
(viii) paying costs for any additional design and engineering; and
(ix) paying all applicable Electrical Safety Authority inspection fees.

E.3. Hydro One shall be responsible for:

(i) providing the design specifications for the construction; and
(ii) inspecting and authorizing the line for Connection.

E.4. Private Ownership of Alternative Bid Construction

As a condition of Connection, the Customer-built line may be transferred to Hydro One's ownership only if constructed to Hydro One's design standards, the line resides on the road allowance and any required easements are provided to Hydro One. Normally, line constructed on private property shall be owned and maintained by the Customer. However, a Customer may privately construct and transfer ownership of the Expansion on private property to Hydro One if all of the following conditions are met:

(i) the line is constructed to Hydro One's design standards;
(ii) the line to be constructed is for the benefit of more than one Customer or there is a physical indication of a possible new connection; and
(iii) easements and cutting rights are granted to Hydro One for the line.

Submarine cable that has been constructed to Hydro One's design standards and that has the appropriate crossing approvals shall be transferred to Hydro One with any required easements, where such cable supplies more than one customer or where there is a physical indication of a possible new connection. Submarine cable supplying a single customer shall be owned and maintained by the Customer.

F. Rebates for Capital Contribution Customers

If a Customer is added, after November, 2000, and within 5 years of the original construction, to an Expansion that was constructed and paid for by another Customer, Hydro One shall, as per the DSC, calculate the rebate amount payable to the initial contributors, considering factors such as the relative load level and the relative line length. Hydro One shall collect the rebate amount from the unforecasted customers and shall pay the said amount to the initial contributors.

Before Hydro One makes the Connection, the new Customer will contribute its fair share of the original Expansion costs for the shared portion of the line; and the original contributor or present property owner, as the case may be, will be entitled to the rebate, without interest, based on the apportioned benefit for the remaining period. No rebates will occur after the 5-year Connection horizon has expired.

G. Rebates for Refund Administration Service

Rebates will normally be made to the present property owners unless a Refund Administration Service agreement is in place.

G.1. Single and Three Phase Lines constructed from January 1, 1993, to October 31, 2000

If a Customer is added to a Single or Three Phase line constructed during the period January 1, 1993 to October 31, 2000, and there is a Refund Administration Service agreement in effect for that line, Hydro One will rebate an amount equal to the new Customer's fair share of the original cost of the shared portion of the line. The original capital contribution is not depreciated.

G.2. Single and Three Phase Lines constructed prior to January 1, 1993 - Capital contribution collected or recorded was $20,000 or more

If a Customer is added to a Single or Three Phase line constructed prior to January 1, 1993, and the original contribution collected or recorded is $20,000 or more, Hydro One will rebate in accordance with the agreement with the original contributor(s), but will not collect from the new Customer an amount equal to the new Customer's fair share of the original cost of the shared portion of the line. The capital contribution is depreciated at 3 per cent per year in service. Prepaid maintenance charges are not depreciated. At the end of the 15th year of the line Connection date, Hydro One will refund all remaining capital and prepaid maintenance.

2.1.3. Connection Denial

Hydro One may deny Connection to any Customer for any of the following reasons:

(i) refusal by the Customer to sign and deliver any agreements required to be executed by the Customer under these Conditions of Service;
(ii) the Connection will represent a contravention of the laws of Canada or Ontario;
(iii) the Connection will cause Hydro One to be in violation of the conditions in the Licence;
(iv) the Connection will have an adverse effect on the reliability or the safety of the Distribution System;
(v) the Connection will cause a material decrease in the efficiency of the Distribution System;
(vi) the Connection will have a material adverse effect on the quality of the Distribution service received by an existing Customer, which effect could include voltage flicker, harmonics and power outages;
(vii) the Connection will result in the discriminatory access to Distribution Services by other Customers;
(viii) the person requesting the Connection is currently in arrears for Distribution Services, electricity supplied, or other services provided by Hydro One;
(ix) the Connection is not in compliance with these Conditions of Service;
(x) the Connection does not meet Hydro One's design requirements;
(xi) the Connection will impose an unsafe situation to workers or the public beyond the normal risks inherent in the operation of the Distribution System;
(xii) the Connection will result in the inability of Hydro One to perform planned inspections or maintenance;
(xiii) by order of the Electrical Safety Authority;
(xiv) the Customer does not have the requisite approval(s) of the Electrical Safety Authority for the Connection; or
(xv) the premises being connected are the subject of a stop work order under the Building Code Act (Ontario).

Hydro One shall notify the Customer of the Connection denial with reasons in writing. Remedies will be suggested to the Customer where Hydro One is able to do so. If it is not possible for Hydro One to resolve the issue, it is the responsibility of the Customer to do so before a Connection will be made.

2.1.4. Inspections Before Connections

All Customer electrical installations shall be inspected and approved by the Electrical Safety Authority before Connection to the Distribution System. Hydro One requires notification from the Electrical Safety Authority of this approval prior to Connection of a Customer.

Where Hydro One has required the Customer to perform specified work associated with the installation of connection assets on the Customer's premises, the Customer shall obtain acceptance by Hydro One of said work as a prerequisite to Connection to the Distribution System.

Before connecting to Hydro One's Distribution System, Hydro One will exercise its obligation to inspect all electrical connections and provisions for metering to ensure that they satisfy all technical requirements, unless a protective device that has been accepted by Hydro One separates the Connection.

Hydro One may at any time re-inspect any electrical connection or meter installation notwithstanding any previous inspection and acceptance of the installation.

Inspection requirements also apply to reconnections noted in Section 2.2.D.

2.1.5. Relocation of Hydro One Facilities and Equipment

A Customer requesting a relocation of all or any part of Hydro One Facilities and Equipment shall pay Hydro One all associated costs incurred by Hydro One in relocating the Hydro One Facilities and Equipment. Where there is applicable legislation or an agreement made with Ontario Hydro prior to April 1, 1999, the cost of such relocation will be as per the legislation or agreement.

If the relocation is from public to Private Property, Hydro One shall acquire easement rights at the expense of the Customer. This would include the actual cost to carry out the work and any costs resulting from having to obtain the new easement or authorization equivalent.

2.1.6. Easements

A. Unregistered Rights

Section 46 of the *Electricity Act* provides that all property that is subject to unregistered rights prior to April 1, 1999, will continue to be subject to the right until the right expires or until it is released by the holder of the right.

B. Registered Easements and Owner Agreement

For new or modified Connections, Hydro One shall have the right to require a Customer to provide Hydro One with a registered easement or an owner agreement with respect to Hydro One Facilities and Equipment located on the property of the Customer or the property of a third party and/or where Hydro One deems it necessary.

Hydro One requires registered easements for facilities under any of the following conditions:

(i) any single or multi-phase line, underground or submarine cables, poles, anchors, or aerial occupation where the line crosses Private Property, including any common service taps;

(ii) anchors on Private Property supporting 44 kV lines, 27.6 kV lines, Three Phase feeders, and any single or multi-phase structures supporting reclosers, voltage regulators or capacitor banks where the poles are located on road allowance; and

(iii) any new facilities and equipment being added to Hydro One Facilities and Equipment which are the subject of an existing unregistered easement that does not include replacement or maintenance of the existing Hydro One Facilities and Equipment.

Owner agreements are required for Hydro One Facilities and Equipment where Hydro One does not require registered easements.

2.1.7. Contracts

A. Implied Contracts

In all cases, notwithstanding the absence of a written contract, Hydro One has an implied contract with any Customer that is connected to the Distribution System and receives Distribution Services from Hydro One. The terms of the implied contract are embedded in these Conditions of Service, the Electricity Distribution Rate Handbook, Hydro One's Rate schedules, the Licence, the Distribution System Code, the Standard Supply Service Code and the Retail Settlement Code, all as amended from time to time.

Any person(s) who take or use electricity delivered and/or supplied by Hydro One shall be liable for payment for such electricity. Any implied contract for the supply of electricity by Hydro One shall be binding upon the heirs, administrators, executors, successors and assigns of the person(s) who took and/or used the electricity supplied by Hydro One.

In the absence of a contract for electricity with a tenant, or in the event the electricity is used by a person (s) unknown to Hydro One, the cost for electricity consumed by such person(s) is due and payable by the owner(s) of such property.

When a tenant contacts Hydro One to establish an account at the property, the contract is with that tenant. When a tenant advises Hydro One that he will no longer accept responsibility for that property, Hydro One will adhere to the date provided by the tenant, regardless of the terms of any lease or verbal agreement between that tenant and the landlord or owner.

Hydro One will not maintain availability of a meter and service without an active account and Customer. When tenants advise Hydro One they are no longer responsible for the account, a final bill will be issued for the account. At that time, a new account will be set up in the landlord/owner's name, unless:

(a) a new tenant has called to assume responsibility for the account**;** or
(b) the landlord/owner refuses responsibility and wishes to have the connection equipment removed.

If a new account is set up in landlord/owner's name, the following terms and conditions apply:

(i) Hydro One will, without any notice, open an account(s) for electrical service to the properties in the landlord/owner's name as soon as any vacating tenant's account has been closed;
(ii) the landlord/owner will be responsible for the new account(s) and will comply with these Conditions of Service; and
(iii) a new account set up charge will apply to the new account(s), which will appear on the first electricity bill for any new account(s). Even though the property may be vacant, monthly service charges and electricity used will be billed to this new account(s).

This arrangement will be in place unless Hydro One is advised in writing otherwise.

B. Customer Service Contract

All Customers wishing to connect to the Distribution System, other than a developer, must sign a Customer Service Contract as described in Appendix "A" to these Conditions of Service.

C. Connection and Cost Recovery Agreements

Where Hydro One is entitled under these Conditions of Service to recover all or a portion of the costs of a Connection and/or requires that a Customer provide a revenue guarantee, the Customer must execute a Connection and Cost Recovery Agreement or a Connection Cost Recovery Agreement ("CCRA"). The CCRA shall be executed before Hydro One commences any construction activities in respect of the Connection. The CCRA will describe the work to be performed by Hydro One in respect of the Connection and any other conditions set forth in Hydro One's offer to connect, together with the applicable payment terms (including revenue guarantees and/or capital contribution where applicable). Key provisions of the CCRA are described in Appendix "A" to these Conditions of Service.

D. Developers

Developers shall be required to execute a Subdivision Agreement. Key provisions of the Subdivision Agreement are described in Appendix "A" to these Conditions of Service.

E. Connection Agreements

(i) Embedded Distributor, Sub-transmission Customer, Large User, Direct Customer or Standard Customer

Hydro One shall have the right to require any Embedded Distributor, Sub-transmission Customer, Large User, Direct Customer or Standard Customer to execute a Connection Agreement. Key provisions of the Connection Agreement are described in Appendix "A" to these Conditions of Service.

(ii) Embedded Generation Facilities

Hydro One requires all Customers with Generation Facilities connected in parallel with the Distribution System and all Embedded Generators wishing to connect to the Distribution System to execute a Connection Agreement in the applicable form prescribed in Appendix "E" of the *Distribution System Code* and/or such other agreements as may be reasonably required by Hydro One in the circumstances as described in Appendix "E" of the *Distribution System Code* as "Other Potential Contracts". The Connection Agreement with an Embedded Generator who is not a Wholesale Market Participant will also contain the terms under which Hydro One purchases power from that Embedded Generator.

(iii) Timing of Execution

Hydro One, in its sole discretion, shall have the right to require Customers to execute a Connection Agreement on or after Connection.

F. Special Contracts

Special contracts that are customized in accordance with the service requested by the Customer normally include the following examples:

(a) construction sites;

(b) mobile facilities;

(c) non-permanent structures;

(d) special occasions, etc.; and

(e) house moves.

2.2. Disconnection

Hydro One reserves the right to physically Disconnect or limit the amount of electricity that a Customer can consume for any of the following reasons:

(i) failure to pay Hydro One any amounts due and payable for the Distribution of electricity or for supply of electricity under Section 29 of the *Electricity Act*;
(ii) failure to pay Hydro One any amounts due and payable on a distributor-consolidated bill;
(iii) failure to pay any Connection costs due and payable;
(iv) non-payment of security deposits identified as a condition of service or a condition of continuing service;
(v) contravention of the laws of Canada or Ontario;
(vi) imposition of an unsafe worker situation beyond normal risks inherent in the operation of the Distribution System;
(vii) adverse effect on the reliability and safety of the Distribution System;
(viii) a material decrease in the efficiency of the Distribution System;
(ix) a material adverse effect on the quality of Distribution Services received by an existing Connection;
(x) inability of Hydro One to perform meter reading, planned inspections, maintenance, repairs or replacement of a meter;
(xi) failure of the Customer to comply with a directive of Hydro One that Hydro One makes for the purposes of meeting its Licence obligations;
(xii) failure of the Customer to comply with any requirements in these Conditions of Service or a term of any agreement made between the Customer and Hydro One, including, but not limited to, a Connection Agreement or a Connection and Cost Recovery Agreement;
(xiii) failure of the Customer to enter into a Connection Agreement required by these Conditions of Service;
(xiv) in compliance with a court order;

(xv) by order of the Electrical Safety Authority;
(xvi) by order of the IESO; or
(xvii) for the reasons identified in Section 2.2.A of these Conditions of Service.

A. Disconnection/Load Limiter Process for Reasons of Non-payment

If a bill remains unpaid in whole or in part twenty-one (21) calendar days after the due date and at least seven (7) calendar days after a written notice has been provided to the Customer by personal service, prepaid mail or by posting notice on the property in a conspicuous place, Hydro One may fully interrupt or limit the distribution of electricity to the Customer.

In accordance with Section 4.2.1 of the Distribution System Code, Hydro One shall provide the Customer being disconnected for non-payment the Fire Safety Notice of the Office of the Fire Marshall and any other public safety notices or information bulletins issued by public safety authorities and provided to Hydro One, which provide information respecting dangers associated with the disconnection of electricity service.

B. Disconnection Process for Reasons Other than Non-Payment

Subject to Hydro One's rights in Section C below, Hydro One will provide notice of disconnection to the Customer for reasons other than non-payment by personal service, prepaid mail or by posting notice on the property in a conspicuous place. If the Customer does not remedy the situation that gave rise to Hydro One's right to disconnect the Customer from the Distribution System within the time period specified by Hydro One in the notice, Hydro One may disconnect the Customer from the Distribution System or interrupt the distribution of electricity to the Customer on or after the date specified in the notice.

C. Immediate Disconnection without Notice

Hydro One may immediately interrupt a Customer, without notice, in accordance with a court order, a request by a fire department or for emergency, public safety (including potential for loss of life or limb), system reliability reasons or in order to inspect, maintain, repair, alter, remove, replace or disconnect wires or other facilities used to distribute electricity or where there is an energy diversion, fraud or abuse on the part of the Customer.

D. Liability for Disconnection

Disconnection does not relieve the Customer of the liability for arrears or minimum bills for the balance of the term of the contract.

Under no circumstances will Hydro One be liable for any damage resulting from, associated with or related to the Disconnection or the limitation of distribution of electricity, including damage to the Customer or the Customer's premises and any business or other losses suffered by the Customer as a result of the disconnection.

E. Reconnection

Where the reason for the Disconnection has been remedied to Hydro One's satisfaction, Hydro One shall reconnect a Customer. All costs, including inspections, associated with the Disconnection and reconnection shall be paid for by the Customer prior to reconnection of the service.

Under any of the following circumstances, Hydro One requires that the Customer obtain the approval of the Electrical Safety Authority prior to Hydro One reconnecting the service:

- (i) where Hydro One has reason to believe that the wiring may have been damaged or altered;
- (ii) where service was disconnected for modification of Customer wiring;
- (iii) where service has been disconnected for a period of six months or longer;
- (iv) where the service was disconnected as a result of an adverse effect on the reliability and safety of the Distribution System; or
- (v) where it is a requirement of the Electrical Safety Code.

F. Disconnection and Reconnection Related Charges

Unless specified elsewhere in these Conditions of Service, a charge shall apply in cases where it is necessary for Hydro One to make a trip to the Customer's premises to collect payment for an overdue account, disconnect service, install a Load Limiter or reconnect service.

G. Unauthorized Energy Use

Hydro One reserves the right to disconnect the Distribution of electricity to a Customer, without notice, for causes including energy diversion, fraud or abuse on the part of the Customer. Such service shall not be reconnected until the Customer rectifies the condition and pays all uncollected charges and costs incurred by Hydro One arising from unauthorized energy use, including inspections and repair costs, and the cost of disconnection and reconnection.

H. Service Cancellation

Where a Customer requests service cancellation, Hydro One will remove certain delivery equipment, such as power lines, transformer and meter. If reconnection is requested, the Customer will incur a cost to reinstall appropriate delivery equipment and shall follow the steps and processes for new connections set out in these Conditions of Service.

2.3. Conveyance of Electricity

2.3.1. Limitations on the Guarantee of Supply

Hydro One will endeavour to use reasonable diligence in providing a regular and uninterrupted supply of electricity but does not guarantee a constant supply or the maintenance of unvaried voltage and will not be liable for damages to the Customer by reason of any failure in respect thereof.

Customers requiring a higher degree of security than that of normal supply are responsible to provide their own backup or standby facilities and/or pay all associated incremental costs. Customers may require, at their premises, special protective equipment which is subject to the approval of Hydro One, to minimize the effect of momentary power interruptions.

Customers requiring a three-phase supply should install protective apparatus to avoid damage to their equipment, which may be caused by the interruption of one phase, or non-simultaneous switching of phases of Hydro One’s supply. Damages resulting from the failure to install protective apparatus shall be at the Customer’s expense.

During an emergency, Hydro One may interrupt supply of electricity to a Customer in response to a shortage of supply or to effect repairs on the Distribution System, or while repairs are being made to Customer-owned equipment. In addition to Hydro One’s rights under Section 40 of the *Electricity Act*, Hydro One or its authorized agents may enter the Customer’s property in accordance with Section 1.6.B of these Conditions of Service.

2.3.2. Power Quality

A. Standards and Guidelines for Power Quality

Hydro One shall follow Good Utility Practice in terms of its guidelines and standards for power quality where applicable but does not guarantee an unvaried voltage or frequency.

B. Voltage and Current Harmonics

Large rectifiers, inverters, arc furnaces, static VAR systems and other non-linear loads generate harmonic voltages and currents. These harmonics may interfere with the operation of the Distribution System by conductive interference and/or may interfere with communication systems by inductive interference.

Hydro One will follow Good Utility Practice for establishing limits on harmonic current emissions and voltage distortions. The Customer shall ensure that the equipment at its facility does not generate harmonic currents that exceed acceptable industry practices.

C. Voltage Fluctuations and Flicker

Voltage fluctuations will normally be within the limits of the Hydro One voltage flicker curve, which is based on the GE Borderline of Irritability for incandescent lighting.

D. Frequency Fluctuations

In general, the frequency of AC power on the Distribution System is dictated by the supply frequency on the transmission system to which the Distribution System is connected.

E. Over-voltages

In general, Hydro One will follow Good Utility Practice to minimize the magnitude and extent of short-term over-voltages.

F. Stray or Tingle Voltage

Varying amounts of low-level voltage often exist between the earth and electrically grounded farm equipment such as metal stabling, feeders, milk pipelines or even wet concrete floors. Usually, these voltage levels present no harm to animals. However, if an animal touches two pieces of equipment that are at different voltage levels, a small electric current passes through the animal. This is known as stray voltage. Stray voltage can be produced by a wide variety of off-farm and on-farm sources.

Using dairy cows as an example, reported symptoms include:

- Reluctance to enter milking parlour
- Reduced water or feed intake
- Nervous or aggressive behaviour
- Uneven and incomplete milkout

- Increased mastitis
- Lowered milk production
- Reduced growth

These same symptoms can also be the result of other non-electrical farm factors. For example, disease, poor nutrition, unsanitary conditions, or milking machine problems can produce some of the same symptoms in farm animals as stray voltage. Farmers should consider and investigate all possibilities, including stray voltage, when attempting to resolve these symptoms.

Off-farm sources:
In a properly functioning electrical distribution system, some voltage will always exist between the neutral system (ground conductors) and the earth. The level of this NEV (neutral-to-earth voltage) can change on a daily or seasonal basis, depending on changes in electrical loading, environmental conditions and other factors. For safety reasons, Hydro One's neutral system is connected to a farm's grounding system. While this bond protects people and animals from shocks caused by faulty electrical equipment and lighting strikes, it also results in a stray voltage equal to a fraction of the NEV appearing on grounded farm equipment such as feeders, waterers, metal stabling, metal grates, milk pipelines and wet concrete floors.

On-the-farm sources:
Poor or faulty farm wiring, improper grounding, unbalanced farm system loading, defective equipment or voltages from telephone lines or gas pipelines are all possible sources.

For additional information on the effects of stray voltage on livestock see the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA) website, www.omafra.gov.on.ca/english/livestock/dairy/facts/strayvol.html.

If you think you have a stray voltage problem, call Hydro One at 1-888-664-9376 to set up an appointment for a visit from Hydro One staff, who will perform appropriate measurements to help determine if stray voltage is present on your farm. Hydro One provides up to 4 hours of stray voltage testing at the Customer's premises without charge.

G. Power Quality Inquiries

Hydro One maintains a 24-hour call answer service (Section 1.5) for the purpose of receiving inquiries from Customers regarding power interruptions, power quality incidents, and incidents related to the integrity or safety of its Distribution System.

In response to a Customer's power quality concern, where the utilization of electric power affects the performance of electrical equipment, Hydro One will work with the Customer to perform investigative analysis to identify the underlying cause. Depending on the circumstances, this may include review of relevant power interruption data, trend analysis, and/or use of diagnostic measurement tools.

If, after an initial investigation, the power quality issue remains unresolved, and it is determined that further detailed engineering study is required, Hydro One shall advise the Customer of an intended course of action. Upon determination of the cause resulting in the power quality concern, where it is deemed a system delivery issue and where industry standards are not met, Hydro One will recommend and/or take appropriate mitigation measures. Hydro One will not be obligated to correct a problem if correcting the problem would adversely affect other Hydro One Customers. Hydro One will use appropriate industry standards and Good Utility Practice as a guideline.

If, through an initial assessment or subsequent detailed investigation, it is determined that the source of a power quality complaint is the Customer's own equipment, then Hydro One may require reimbursement from the Customer for all or a portion of the costs incurred in carrying out the investigation.

H. Outage Notification Process

It is occasionally necessary to interrupt a Customer's supply to maintain or improve the Distribution System. For planned outages, Hydro One will endeavor to provide as much notice as possible, but at least two (2) business days' notice for minor interruptions and up to ten (10) business days' notice for larger interruptions. Hydro One will notify Customers by telephone, fax, mail or hand delivery. Additional notification through the media may also be provided.

In emergencies, Hydro One will not provide prior notification of an interruption.

2.3.3. Electrical Disturbances

Customer Responsibilities

Customers shall ensure that their electrical equipment does not cause any unacceptable voltage fluctuations, voltage unbalance, harmonics, or other disturbances that could negatively affect other Customers connected to the Distribution System, or Hydro One Facilities and Equipment. Examples of equipment capable of causing disturbances are large motors, welders, and variable speed drives. In planning the installation of such equipment, the Customer must consult with Hydro One.

The Customer's equipment shall comply with the limitations for permissible distortion caused by harmonic currents and voltages described in CAN/CSA-C61000-3-6 from the Canadian Standards Association.

If it is determined that unacceptable conditions are being caused by any Customer Equipment, the Customer shall take appropriate remedial action to correct the condition. Depending on the severity of the electrical disturbance, Hydro One may require that such equipment be disconnected from the Distribution System, in accordance with Section 2.2, until corrective measures are taken.

The characteristics of specific electrical disturbances should be referred to Hydro One for evaluation and interpretation against the Hydro One standards and guidelines for power quality. (See Section 2.3.2A)

Customers who may require an uninterrupted source of electricity, or a supply completely free from fluctuations and disturbance, must provide their own power conditioning equipment for these purposes.

2.3.4. Standard Voltage Offerings

Hydro One will supply a single stage of transformation to the Customer's utilization voltage at standard voltages only. These voltages will conform to Canadian Standards Association ("CSA") standards. The Customer will supply any additional transformation required below the utilization voltage if required. Where the Customer requires a secondary voltage other than those noted below, the Customer shall supply the transformers and associated equipment.

A. Standard Secondary Voltages

Single Phase – 120/240 volts 3 wire;

Three Phase – 120/208 volts 4 wire; and

Three Phase - 347/600 volts 4 wire.

B. Standard Primary Voltages

Hydro One has a variety of primary distribution and sub-transmission voltages across the province, but in general has only one primary voltage in each vicinity. Hydro One shall provide only the nominal primary voltage present in the vicinity to service a Connection or development, unless the development cannot be effectively fed from the existing supply. Customers requesting a Primary or Sub-transmission Service should contact Hydro One to determine the primary voltage available at their location.

Typical Primary Voltages

44,000 Volts – 3 Phase 3 Wire;
16,000/27,600 Volts – 3 Phase 4 Wire;
14,400/25,000 Volts – 3 Phase 4 Wire;

8,000/13,800 Volts – 3 Phase 4 Wire;
4,800/8,320 Volts – 3 Phase 4 Wire; or
2,140/4,160 Volts – 3 Phase 4 Wire

2.3.5. Voltage Guidelines

Standard operating conditions are:

CSA Standard CAN3-235-83 Table 3				
Nominal System Voltages	Recommended Voltage Variation Limits for Circuits up to 1000 volts, at the Service Entrance.			
	Extreme Operating Conditions	Normal Operating Conditions		Extreme Operating Conditions
Single Phase				
120/240	106/212	110/220	125/250	127/254
240	212	220	250	254
480	424	440	500	508
600	530	550	625	635
Three Phase 4 -Wire				
120/208Y	110/190	112/194	125/216	127/220
240/416Y	220/380	224/388	250/432	254/440
277/480Y	245/424	254/440	288/500	293/508
346/600Y	306/530	318/550	360/625	367/635
Three Phase 3 – Wire				
240	212	220	250	254
480	424	440	500	508
600	530	550	625	635

These voltage guidelines relate to long-term steady-state levels and do not include short term or transient disturbances.

For system voltages greater than 1,000 V and up to 50,000 V, the maximum voltage variation is ± 6% of the nominal voltage. Under emergency conditions voltages may drop below these thresholds.

Where voltages lie outside the indicated limits for Normal Operating Conditions but within the indicated limits for Extreme Operating Conditions, improvement or corrective action will be taken on a planned and programmed basis, but not necessarily on an emergency basis.

Where voltages lie outside the indicated limits for Extreme Operating Conditions, improvement or corrective action will be taken on an emergency basis. The urgency for such action will depend on many factors such as the location and nature of load or circuit involved, and the extent to which limits are exceeded with respect to voltage levels and duration, etc.

Hydro One practises reasonable diligence in maintaining supply voltage levels but is not responsible for variations in voltage from external forces such as operating contingencies, exceptionally high loads and low voltage supply from the transmitter.

2.3.6. Emergency Backup Generation Facilities & Load Displacement Generation Facilities

2.3.6.1. Portable or Permanently Connected Emergency Backup Generation Facilities

Customers with a portable or permanently connected Emergency Backup Generation Facilities shall comply with all the applicable criteria of the Electrical Safety Code and, in particular, shall ensure that the Customer's emergency generation does not back feed on the Distribution System. The Customer shall be responsible for proper interface protection between the portable or permanently connected Emergency Backup Generation Facility's electrical circuits and the Distribution System. Portable or permanently connected Emergency Backup Generation Facilities shall not be installed in a manner that would adversely affect the Distribution System. Portable or permanently connected Emergency Backup Generation Facilities must be operated in isolation from the Distribution System.

Customers with permanently connected Emergency Backup Generation Facilities shall notify Hydro One regarding the presence of such equipment. All applicable environmental requirements are the responsibility of the Customer. Customers shall consult with Hydro One during the planning and prior to the installation of any portable or permanently connected Emergency Backup Generation Facilities.

2.3.6.2 Load Displacement Generation Facilities

Customers intending to install generators for Load Displacement purposes shall consult with Hydro One during the planning of and prior to the installation of any Generation Facility for Load Displacement. Customers with a Load Displacement Generation Facility shall comply with all the applicable criteria of the Electrical Safety Code and, in particular, shall ensure that the Load Displacement generation does not back feed onto the Distribution System. The Customer shall be responsible for proper interface protection between the Customer's electrical circuits and the Distribution System. Any Load Displacement generation shall be installed in a manner that would not adversely affect the Distribution System. All Customers with Load Displacement generation must notify Hydro One regarding the presence of their Load Displacement Generation. Load Displacement generation must satisfy the general technical requirements and the Connection Impact Assessment (CIA) criteria set out in section 3.5 of these Conditions of Service.

2.3.7. Metering and Meter Reading

2.3.7.1. General

For Retail settlement and billing purposes, Hydro One shall provide, install, own and maintain a Meter Installation for all Customers except where the Customer or Embedded Distributor elects to be a Wholesale Market Participant or is an Embedded Generator.

The type of metering will be based on the Customer's Rate class, energy consumption and peak load. The security and accuracy of metering will be maintained under regulations and standards established by Measurement Canada and Hydro One.

When a Customer's power factor is known to be less than 90 per cent, a kVA meter or other equivalent electronic meter shall be used for measuring and billing.

If deemed appropriate by Hydro One, the Customer shall permit Hydro One to connect a revenue meter through the Customer's phone line for remote interrogation and data transfer. Hydro One will ensure that there are no material adverse impacts of the revenue meter connection on the Customer's use of the phone line.

The meter measuring the Customer's electricity consumption is owned and maintained by Hydro One. This ownership ends at the meter base, which then feeds into the premise's electrical panel. Any maintenance requirements for the meter base are the responsibility of the Customer.

A. Location of metering

The meter(s) shall be located on the exterior of the building as determined by the layout and approved by Hydro One based on standards established by the Electrical Safety Code and the Ontario Building Code. In general, the meter(s) may be located:

(i) on the front side of the building facing the street or roadway;
(ii) no more than 3 metres from the front facing the street or roadway;
(iii) on the wall of the building so that midpoint of the meter after installation will be 1.75 metres plus or minus 100mm from finished grade, or, where this is not possible, the meter may be installed on poles or on a separate support;

(iv) if the meter(s) are located on poles, the poles must be installed, owned and maintained by the Customer on the Customer's property; or

(v) in dedicated metering rooms for large general service class Customers (e.g. shopping centres, apartment and condominium buildings), provided that guaranteed continuous access, by key or other appropriate means, is provided to Hydro One or its authorized agent.

B. Single Phase – Secondary Metered

New Customers with Secondary Metered Service shall have metering based on estimated load. Existing Customers with Secondary Metered Service shall have metering based on the actual average monthly peak load for the previous year. Standard Customers with an average monthly peak load of 50 kW or less shall be metered and billed on kilowatt-hours ("kWh") only. Standard Customers with an average monthly peak load over 50 kW shall be metered and billed on monthly kW as well as kWh, except those in residential and seasonal residential rate classifications.

C. Three Phase – Secondary Metered

All Three Phase Standard Customers will be metered for energy usage in kWh and for peak monthly kW demand and/or monthly peak kVA, depending on the peak load and power factor at the Customer's utilization voltage.

D. Primary Metered

Where a Primary Metered Service is used, the Standard Customer shall own and maintain the entire Distribution System beyond the metering point, which will include poles, conductors and transformers.

E. Totalized Metering

When a Customer requests totalizing in order to consolidate two or more Delivery Points at separate locations on one contiguous property, the following conditions shall apply:

(i) the Customer must own the distribution facilities, including transformation beyond the effective metering point. The effective metering point is defined as the location where primary metering is installed;

(ii) totalizing will be accomplished by either primary or secondary metering, through the use of remote interrogation metering, or other similar units. The Customer shall pay the incremental costs of providing totalizing metering; and

(iii) the total capacity required is less than the Delivery Point capacity limits noted in Section 2.1M.

F. Metering for an Embedded Generation Facility

Net Metered Generation Facilities

Hydro One shall offer a net metering option for load Customers installing a generation facility that meet the criteria set out in subsection 7(1) of the Net Metering Regulation, Ontario Regulation 541/05.

Embedded Generation Facilities, including Renewable Energy Standard Offer Program (RESOP) Generation Facilities

Metering for Embedded Generation Facilities shall comply with the requirements of Hydro One's policy on Metering for Embedded Generators NOP-041, which can be found at www.HydroOneNetworks.com.

G. Central Metering

Hydro One may, at its discretion, require that a Standard Customer with two or more buildings be metered by means of a central metering service. The Standard Customer shall pay Hydro One the following labour and material charges:

(i) for existing service under 45 kW, the Standard Customer shall pay labour and material costs;
(ii) for existing service over 45 kW, the Standard Customer shall pay labour costs only;
(iii) for new service under 45 kW, the Standard Customer shall pay for instrument transformer costs; and
(iv) for new service over 45 kW, the Standard Customer shall not be required to pay for labour or material.

H. Metering Pulses

When Customers request metering pulses or signals for load management purposes, two options exist:

(i) The Customer provides his own instrument transformers and signal control equipment in a separate cabinet on the load side of Hydro One's metering; or

(ii) Hydro One will supply the pulses or signals on the following terms:

(a) the Standard Customer pays all costs to provide pulses and signals; and
(b) the control for pulse or signal will be brought to a Hydro One terminal block remote from the revenue metering. Consequently, the Customer will not have access to Hydro One's metering equipment. (Customers are not allowed to connect to Hydro One's instrument transformers).

I. Multiple Residential Properties

Where the owner of an existing bulk metered Multiple Residential Property chooses to convert to individual metered dwelling units, the costs of conversion will be the owner's responsibility. In such cases, the common facilities such as elevators, hall lights, exterior lighting, laundry equipment, central electric water heating, etc., shall be combined on a separate service and billed at the General Service rate with demand metering as appropriate.

2.3.7.2 Current Transformer Boxes

Standard Customers are responsible for supplying, owning, and maintaining meter bases, except for Three Phase services with Complex Metering Installations where Hydro One requires and supplies at no charge a "P" base enclosure. For services requiring additional metering components such as instrument transformers, the Standard Customer shall supply and install the following, all of which are subject to approval by the Electrical Safety Authority and Hydro One:

(i) instrument transformer enclosures with minimum dimensions of 90cm x 90cm x 30cm;
(ii) all required conduit as specified by Hydro One; and
(iii) where appropriate, a self-contained 400 amp meter base complete with a 400 amp current transformer. Hydro One will provide the Standard Customer with an allowance for the cost of the current transformer.

For central metering services, a current transformer enclosure is not required.

2.3.7.3 Interval Metering

A. Conditions for Supplying Interval Metering

Hydro One shall provide and install a Metering Inside the Settlement Timeframe (MIST) Meter for any existing Customer that has an average monthly peak demand greater than 1000 kW during a 12-month period.

Hydro One shall install a MIST Meter on any new installation that is forecasted by Hydro One to have an average monthly peak demand greater than 200 kW.

Hydro One may provide a MIST Meter to an existing Customer who upgrades his service size and as a result of the increased service size, the meter must be replaced.

Existing Customers who are below the 1000 kW threshold may request an Interval Meter, by submitting a written request. Hydro One shall, at its discretion, determine whether this is a MIST Meter or MOST Meter. A Customer who does not qualify for an Interval Meter, as noted above, shall pay Hydro One for the difference between the cost of a standard Meter Installation and the cost of the Interval Meter installation, including the cost of equipment, labour and telecommunications.

B. Interval-Metering Data

While the meter data belongs to the Customer, Hydro One requires the information to settle the Customer's electricity bill. Hydro One will maintain the usage profile of all Customers with Interval Meters and shall make this information available to Customers.

The Customer has the following three options to obtain Interval Meter data:

(i) direct access – The Customer can elect to access the MIST Meter data directly using Standard Customer purchased software. Hydro One will provide the information required to access and use the meter data provided that the Customer executes the Read Only Access Agreement. Key provisions of the Read Only Access Agreement are described in Appendix "A" to these Conditions of Service;

(ii) Web access provided by Hydro One – when available, Customers will have access to their own Interval Meter data on the Internet using their own account specific password; and

(iii) information provided by Hydro One – Customer may request interval data to be forwarded by Hydro One or its authorized agent, for a fee, levied in accordance with the Retail Settlement Code.

If a Customer requires real-time information from a MIST Meter, the Customer shall be responsible for installing and maintaining a telecommunications line at its own expense.

C. Smart Metering

Hydro One has begun replacing metering with Smart Meters, to meet Ontario Government targets to install smart meters in all Ontario households and small businesses by 2010. For an interim period, a smart meter is deemed to be a conventional meter, until Hydro One elects to implement time-of-use pricing.

2.3.7.4 Meter Reading

If unable to access the premises, Hydro One shall attempt to arrange access to the premises at a time convenient for both Hydro One and the Customer. At its discretion, Hydro One may require the Customer to read the meter and provide the results to Hydro One.

If the Customer does not accommodate Hydro One's request for meter reading or access, the Customer shall be informed in writing of its obligation to contact Hydro One and arrange appropriate access to the meters, or provide Hydro One with the required meter readings.

Hydro One reads meters on a monthly, bi-monthly, quarterly, or annual frequency, depending on Rate classification and service size, and meter readings are obtained either manually or remotely using electronic means. Where Hydro One is unable, for any reason, to obtain a meter reading the Customer may be required to provide a meter reading.

Hydro One reserves the right to use an estimated meter read for both energy and demand quantities when actual readings are not scheduled or available.

To ensure accurate billing and proper operation, it is necessary for Hydro One to read, and visually inspect the meter, at least annually. If Hydro One cannot access the meter for this purpose after the Customer has been contacted directly, Hydro One reserves the right to require a relocation of the meter at the Customer's expense. If the situation is not rectified, Hydro One may ultimately disconnect the Customer in accordance with Section 2.2 of these Conditions of Service.

2.3.7.5 Final Meter Reading

When a final meter reading is required for billing purposes, the Customer shall provide Hydro One with at least five (5) business days' notice of the date the billing is to be discontinued to allow Hydro One to obtain a final meter reading as close as reasonably possible to the required date. The Customer shall provide access to Hydro One for this purpose. If access is not obtained and a final meter reading is not possible, the Customer shall pay an amount based on estimated electrical demand and/or the electrical energy used since the last meter reading.

2.3.7.6 Faulty Registration of Meters

The security and accuracy of metering is governed by the federal *Electricity and Gas Inspection Act* and associated regulations, under the jurisdiction of

Measurement Canada. Hydro One's revenue meters shall comply with the accuracy specifications established by those regulations.

The entity billing a Customer, whether it is Hydro One or a Retailer, is responsible for advising the Customer of any meter error of which it becomes aware and its magnitude and of the Customer's rights and obligations under the *Electricity and Gas Inspection Act*. The billing entity is also responsible for subsequently settling actual payment differences with the Customer or Retailer.

In the event of incorrect electricity usage registration, the billing entity will rectify billing errors in the manner set out in Section 2.4.4 of these Conditions of Service.

2.3.7.7 Meter Dispute Testing

Measurement Canada has jurisdiction, under the *Electricity and Gas Inspection Act*, in a dispute between Hydro One and its Customer where the condition or registration of a meter or metering installation is in question. Hydro One will inform Customers of the assistance provided by Measurement Canada in dispute investigations.

Meter dispute testing is typically the last step in a multi-stage process between the Customer and Hydro One. The process typically begins with a Customer high bill inquiry, the object of which is to validate that the bill calculations, charges and bill determinants are accurate. The process may include any or all of the following steps, as required: collection of problem details from the Customer; analysis of billing details including calculation of charges and appropriateness of meter readings; comparison of estimated readings with past usage; obtaining a check meter reading; provision of information to assist the Customer understanding of and confidence in the bills; and field visit to the Customer premises to verify meter reading, meter data and test meter operation.

At any point in this process, if Hydro One staff determine suspect meter operation, a meter dispute test will be initiated. However, if Hydro One is satisfied with meter operation and accuracy of billing, and the Customer is not satisfied, the Customer will be referred to Measurement Canada.

If the services of Measurement Canada are requested by the Customer or Retailer to resolve the issue, Hydro One may charge the Customer for the costs of processing the application to Measurement Canada and removing and transporting the meter to a testing location. If the dispute is substantiated by Measurement Canada and the resolution is in the favour of the Customer, Hydro One shall bear such costs.

Measurement Canada will follow its dispute investigation process and issue a decision. Hydro One or the Customer who initiated the dispute investigation both have the option to appeal the decision and follow Measurement Canada's appeal process.

2.4. Tariffs and Charges

2.4.1. Service Connection

2.4.1.1 Rate Classifications

When assigning a Customer to the appropriate Rate classification, Hydro One considers the nature and use of the Customer's electricity service, as well as the density of the Customers connected to the Distribution line. The Distribution Services Rates for each classification are based on the cost of delivering electricity to that class of Customers and meeting their electricity supply needs.

The main Rate classifications are Residential-Year-Round, Seasonal Residential, Farm, Industrial Commercial, Industrial Commercial General Service, Industrial Commercial Sub Transmission, and Lighting (Street Light and Sentinel). The Rate classifications for Acquired Local Distribution Company Customers are Residential, General Service-Energy Billed, General Service-Demand Billed, Unmetered Scattered Load and Large Use. All Hydro One Rates charged for each Rate classification for Distribution Services, including charges for services provided to specific Customers where the costs are not recovered through the Distribution Service Rates ("Miscellaneous Distribution Charges") and pass-through charges, are subject to OEB approval. In addition, Hydro One is required to pass through the OEB-approved charges for Wholesale Market Services and Retail Transmission Services.

Hydro One also provides Distribution Services to Direct Customers and Embedded Distributors who may or may not be Wholesale Market Participants.

2.4.1.2 Components of Distribution Rates

Hydro One Distribution Service Rates include a monthly service charge component and a volume-based component. For Demand Billed Customers, the volume Rate is a per kW charge. The billing demand shall be taken as 90% of the kVA or 100% of the measured demand in kW, whichever is greater. For Energy Only Customers, the volume Rate is a per kWh charge. The monthly service charge component is designed to recover some common costs of Distribution Services that are independent of electricity use. All other Distribution Service costs are recovered through the volume Rate.

2.4.1.3 Rural or Remote Electricity Rate Protection, and Debt Retirement Charge

Hydro One is required to collect rural and remote rate protection in accordance with the Regulations made pursuant to Section 79 of the *Electricity Act* and Debt Retirement Charges set in accordance with Section 85 of the *Electricity Act*.

2.4.1.4 Rate Schedules and Notice of Rate Changes

The OEB-approved Rates and charges for Distribution Services are as set out in the Rate schedules available at www.HydroOneNetworks.com. Notice of Rate changes may be published in major local newspapers and shall be mailed to all Customers with the first bills issued using the revised Rates.

2.4.2. Energy Supply

A. Standard Supply Service

Hydro One shall provide Customers connected to the Distribution System with access to electricity through Standard Supply Service. All Customers are Standard Supply Service Customers until Hydro One is informed of and completes the Customer transfer to a competitive Retailer, all in accordance with Section 10 Service Transaction Requests of the Retail Settlement Code.

Hydro One may, at its discretion, refuse to process a Service Transfer Request for a Customer to switch to a Retailer if that Customer is in arrears to Hydro One for Distribution Services and/or Standard Supply Service.

Where a Service Transfer Request is made, a switch bill will be issued to the Customer. This bill will be based on an actual meter read unless the Customer, Hydro One and the Retailer agree in writing to an alternative. The effective date of the service transfer shall be the next scheduled meter reading date unless a request is made for a special meter reading and Hydro One can accommodate the request. The OEB-approved special meter read charge will apply.

All service transfers, except a return to Standard Supply Service, must be supported by the Customer's written authorization, a copy of which must be retained by the applicable competitive Retailer.

B. Pricing of Standard Supply Service, including Regulated Price Plan (RPP)

Pricing of Standard Supply Service is in accordance with applicable regulations made under the *Ontario Energy Board Act* and the Standard Supply Code, specifically section 3, Rates. Pricing of Standard Supply Service is dependent on Customer electricity usage and meter type as follows:

(i) Customers with conventional meters, and who are eligible for RPP as outlined in Ontario Regulation 95/05, shall be charged for Standard Supply Service at rates determined, approved or fixed by the Ontario Energy Board.

(ii) Non-RPP customers with conventional meters shall be billed for hourly electrical energy consumed based on the weighted average hourly spot market (WAHSP) for electricity for the period over which the customer is being billed. The WAHSP will be calculated according to the methodology prescribed in the Retail Settlement Code.

(iii) Non-RPP customers with Interval Meter or another eligible time-of-use metering infrastructure capable of providing data on at least an hourly basis shall be billed for hourly electrical energy consumed based on the respective Hourly Ontario Electricity Price (HOEP).

(iv) Electing Spot Consumers with Interval Meter or another eligible time-of-use metering infrastructure capable of providing data on at least an hourly basis shall be billed for hourly electrical energy consumed based on the respective Hourly Ontario Electricity Price (HOEP).

Hydro One will categorize a Customer as an Electing Spot Consumer only when notified by the Customer in writing, and where the Customer has an Interval Meter or another eligible time-of-use metering infrastructure capable of providing data on at least an hourly basis.

Hydro One will issue an RPP variance settlement amount when:

- advised by the Customer of a move out of Ontario;
- following receipt of a notice that the Customer will buy electricity from a Retailer;
- advised by the Customer of electing to Spot; or
- the Customer ceases to be eligible for RPP.

The variance amount will be a charge or credit, and will be calculated in accordance with the methodology established by the Ontario Energy Board.

Until Hydro One elects to implement time-of-use pricing or the classification is changed by the OEB, a smart meter is deemed to be a conventional meter, and pricing will be in accordance with the categories set out above.

C. Competitive Retailer Supplied Electricity

Hydro One does not provide Standard Supply Service to a Distribution System connected Customer that has contracted with a Retailer for electricity supply. Hydro One remains obligated to provide Distribution Services to such Customer in accordance with these Conditions of Service. The Retailer-supplied Customer will be billed either by Hydro One under Distributor Consolidated Billing or by the Customer's designated Retailer under Retailer Consolidated Billing, as prescribed in the Retail Settlement Code.

2.4.3. Deposits

For the purposes of this Section 2.4.3, residential Customers include Residential, Seasonal Residential, Energy Billed Farm Customers with a principal residence, and bulk metered residential condominiums.

For the purposes of this Section 2.4.3, non-residential Customers include Farm with no principal residence, Industrial Commercial General Service, Industrial Commercial Sub Transmission, General Service-Energy Billed, General Service-Demand Billed, Large Use, Directs, Unmetered Scattered Loads and Lighting (Street and Sentinel)

A. Requirements for Security Deposit

Hydro One may require a security deposit from a Customer unless the Customer has a good payment history of one year in the case of a residential Customer, five years in the case of a non-residential Customer in a less than 50 kW demand rate class, or seven years in the case of a non-residential Customer in any other rate class. The time period that makes up the good payment history must be the most recent period of time and some of the time period must have occurred in the previous 24 months.

Security deposits may be required at the time the Customer initially applies for service, or subsequently when a Customer has failed to maintain a good payment history. The security deposit amount will be applied to the Customer's electricity account and appear as a charge on the next electricity bill issued.

B. Acceptable Forms of Security

Hydro One will accept security deposits in either of the following forms, at the discretion of the Customer:

(i) cash or cheque; or
(ii) automatically renewing irrevocable letter of credit from a bank as defined in the *Bank Act*.

At the Customer's discretion, a security deposit required at the time of application for service may be paid in equal monthly installments over a period of up to six months. Customers wishing to pay in installments must contact Hydro One at 1-888-664-9376 to make such payment arrangements.

C. Calculation of Security Deposit Amounts

Billing Cycle Factors shall be 2.5 for monthly-billed Customers, 1.75 for bi-monthly billed Customers and 1.5 for quarterly-billed Customers.

Security deposit levels for new Customers shall be determined in the following manner:

Billing Cycle Factor X estimated bill based on Customer's average monthly load during most recent 12 consecutive months within the past two years.

Where 12 consecutive months of relevant usage information within the past two years is not available, the Customer's average monthly load shall be based on a reasonable estimate made by Hydro One.

D. Limits on amount of security required

All rate classes:

The maximum amount of a security deposit shall be calculated based on the Billing Cycle Factor multiplied by the estimated bill based on the Customer's average monthly load during the most recent 12 consecutive months within the past two years (or Hydro One's reasonable estimate of monthly load where there is insufficient history).

Where a Customer has a payment history which discloses more than one disconnection notice in a relevant 12-month period, Hydro One will use that Customer's highest actual or estimated monthly load to calculate the security deposit amount.

Non-residential Demand Billed (> 50 kW) rate class:

Despite the above, where the Customer provides Hydro One with a credit rating from a recognized credit rating agency, the maximum amount of security deposit shall be reduced in accordance with the following table. The table below uses Standard & Poor's ratings, but equivalent ratings from Moody's and Dominion Bond Rating Services will be accepted.

Credit Rating (using Standard & Poor's Ratings)	Allowable Reduction
AAA- and above or equivalent	100 per cent
AA-, AA, AA+ or equivalent	95 per cent
A-, From A, A+ to below AA or equivalent	85 per cent
BBB-, From BBB, BBB+ to below A or equivalent	75 per cent
Below BBB- or equivalent	0 per cent

Exception:

Despite the above, for a non-residential > 5000 kW Customer who has established a good payment history for the relevant seven year period, Hydro One will return only 50 per cent of the security deposit held.

E. Review and Updating of Security Deposits

Hydro One will review and update security deposits at least once each calendar year to determine whether the entire amount is to be returned to the Customer due to establishment of a good payment history for the relevant period of time, or whether the amount is to be adjusted based on recalculation of the maximum amount of the security deposit under 2.4.3 C or 2.4.3 D above. Where some or all of the security is to be returned to the Customer, Hydro One will promptly credit the Customer's account including applicable interest.

Customers receiving more than one disconnection notice in a relevant 12-month period shall provide a security deposit or increase the amount of the existing security deposit.

F. Interest on Security Deposits

Interest is payable on cash/cheque security deposits and shall accrue monthly commencing on receipt of the total deposit required. The interest rate shall be at the Prime Business Rate as published on the Bank of Canada Web site, less two (2) per cent, updated quarterly, to a minimum of zero per cent.

Interest due will be paid out quarterly, or on return of the security deposit or closure of the account, whichever comes first. Interest will be paid out as a credit to the account.

G. Waiver/return of security deposit for Good Payment History

At Hydro One's discretion, residential Customers who do not have a payment history with Hydro One for the relevant time period, may be exempted from providing security at application for service. In these cases, security shall be required if the Customer fails to maintain a good payment history.

Security deposits shall be waived or returned for all other Customers demonstrating good payment history with Hydro One for the relevant time period. The relevant time period is based on the date the deposit was paid in full.

For all Customers except non-residential > 5000 kW, a security deposit required by Hydro One shall be waived on receipt by Hydro One from the Customer, of a satisfactory credit check from TransUnion, Equifax or D&B credit reporting agencies. The decision as to whether the credit check is satisfactory is within Hydro One's sole discretion.

Good Payment History Criteria

A Customer is deemed to have a good payment history unless, during the relevant time period specified below, the Customer has:

- received more than one disconnection notice from Hydro One;
- has more than one cheque given to Hydro One by the Customer returned for insufficient funds;
- has more than one pre-authorized payment to Hydro One returned for insufficient funds; or
- a Disconnect/Collect Trip has occurred.

If any of the preceding events occur due to an error by Hydro One, the Customer's good payment history shall not be affected.

Relevant time periods for establishing a good payment history are the most recent period of time, with at least some of the time occurring in the previous 24 months.

Relevant Time Period

In order for Hydro One to waive or refund a security deposit, good payment history criteria must be maintained by the Customer for the following time periods:

Residential Customer: one year's Good Payment History

Non-residential Customer < 50 kW: five years' Good Payment History

Non-residential Customer > 50 kW: seven years' Good Payment History

Non-residential Customer > 5000 kW rate class: after seven years' Good Payment History only 50 per cent of the security deposit held will be returned. The balance of the security deposit will be retained by Hydro One until closure of the account.

Security deposits shall not be applied to active account arrears and shall not constitute payment of an outstanding account, in whole or part. If Hydro One is in possession of a cash security deposit when the account is terminated, the deposit plus accrued interest, or applicable portion thereof, shall be returned to the Customer through a credit applied to the final bill or a cheque, at Hydro One's discretion. Hydro One will return any excess deposit amount to the Customer directly and within six (6) weeks after account closure. Non-cash security will be applied after the final bill due date, if full payment is not received from the Customer.

A security deposit requested by Hydro One may also be waived or decreased if the Customer provides a reference letter that confirms good payment history from another electricity or natural gas utility in Canada, where the customer was previously a customer. The letter must indicate good payment history for at least 12 months if the Customer has less than 50 kW demand, or seven years if the Customer has a demand equal to or greater than 50 kW demand. Some of this time must have occurred within the previous 24 months.

If a security deposit amount is applied due to a poor payment history, neither a satisfactory utility reference nor credit check will be accepted to waive the deposit. Only maintenance of a good payment history will allow for refund of the deposit. If good payment history is not maintained, Hydro One will not accept another utility reference letter. Utility reference letters are valid for a one-year period.

H. Enforcement where security deposit not paid

Payment of security deposits identified as a condition of service or continuing service will be enforced through collection activities for amounts due, up to and including disconnection of electrical service. (See Section 2.2 of these Conditions of Service.)

I. Security from Embedded Distributors

Embedded Distributors shall post security deposits with Hydro One if a good payment history is not maintained for seven years. Deposits will be calculated according to the following:

<u>Maximum Security Deposit Amount. Wholesale Market Participant:</u>
Security Deposit amount will be calculated based on average monthly non-competitive electricity costs billed by Hydro One, multiplied by the Billing Cycle Factor of 2.5.

<u>Maximum Security Deposit Amount. Not a Wholesale Market Participant</u>
Security deposit amount will be calculated based on Billing Cycle Factor of 2.5 multiplied by the average monthly non-competitive electricity costs plus competitive electricity costs, using the average monthly consumption and cost of energy used by the IESO for the purpose of determining prudential support obligations for Distributors.

<u>Security Deposit Reductions for Good Payment History</u>
Hydro One will reduce the security deposit amount required from an Embedded Distributor based on the following good payment history time periods listed below:

(i) 25 per cent reduction for 2 years;
(ii) 50 per cent reduction for 3 years;
(iii) 75 per cent reduction for 5 years; and
(iv) 100 per cent reduction for 7 years.

Where a security deposit has been reduced for good credit rating (see D, non-residential Demand Billed) it will be further reduced if good payment history periods outlined above are met.

<u>Review and Adjustment of Security</u>

Hydro One shall review security deposit amounts on a periodic basis to determine whether:

(i) a portion of the security deposit is to be returned to the customer based on the number of years of good payment history demonstrated; or

(ii) the security deposit amount is to be adjusted based on a recalculation of the maximum security deposit amount.

J. Acceptable Forms of Security

Hydro One shall accept security deposits in the form of cash or cheque, or automatically renewing, irrevocable letter of credit from a bank as defined in the *Bank Act*, or a combination thereof, at the discretion of the Customer.

2.4.4. Billing

In this Section 2.4.4, references to monthly, bi-monthly, quarterly, and annually are notional and approximate time periods only. They are not to be construed as calendar-based time periods.

A. Billing Frequency

Depending on Rate classification and service size, Customers are billed on a monthly, bimonthly, or quarterly frequency.

B. Low Use Billing Suspension Credit

Billing suspension of any account may be granted for low use farm and general service with less than 2,500 kWh per year that was connected prior to January 1, 1996. The Customer must sign an agreement annually. The suspension is for either a four-month or six-month period, and the Customer will be credited in an amount equal to the monthly service charge multiplied by the number of months suspended. A charge equal to the suspension credit will be applied if the Customer exceeds the limit of 2,500 kWh per year or takes power during the identified period of suspension. In addition to the charge, the Customer will be billed for the kWh consumed in excess of 2,500 kWh per year.

C. Use of Estimates

In months where a bill is issued but no reading is obtained, Hydro One will estimate energy and demand in order to determine billing quantities. The estimate is based on historical usage for the premise, or a predetermined quantity if there is no historical usage information available.

Customers may avoid receiving bills based on estimated meter readings if they provide Customer-obtained meter reads that pass validation checks and are provided according to processes and timing established by Hydro One for billing purposes.

D. Pro-ration of Accounts

Accounts will be pro-rated where the bill to a Customer is for a period shorter or longer than the standard billing period or where rates have been revised effective on a date not coincident with the Customer's billing or meter reading date.

E. Budget Billing Plan

A budget billing plan is available to all Standard Supply Service Customers and retailer-enrolled Customers on Distributor Consolidated billing. To help smooth electricity costs over the year, the plan bills an equal portion of the previous year's charges per bill period and then reconciles the balance owing in the anniversary month. Periodic adjustments may be made to the regular budget bill amount due to Rate or usage changes.

The budget billing plan is not available to Customers who are demand-billed or whose meters are read monthly.

F. Billing Errors: Over and Under Billing

Where a billing error, from any cause, has resulted in a Customer or Retailer being overbilled, and where Measurement Canada has not become involved in the dispute, Hydro One will credit the Customer or Retailer with the amount erroneously billed, for up to a six-year (6-year) period. Where the billing error is not the result of Hydro One's standard billing practices (i.e. estimated meter reads), Hydro One will pay interest on the amount credited at the same rate of interest as paid on security deposits (section 2.4.3).

Where a billing error, from any cause, has resulted in a Customer or Retailer being underbilled, and where Measurement Canada has not become involved in the dispute, the Customer or Retailer shall pay to Hydro One the amount that was not previously billed. In the case of an individual Customer who is not responsible for the error, the allowable period of time for which the Customer may be charged is two (2) years for residential customers and six (6) years for all other customers. For instances of wilful damage, the resulting time period is the duration of the defect, where records are available.

For either situation, where Measurement Canada is involved in instances of checking meter registration accuracy, Measurement Canada will issue a decision. Hydro One or the Customer who initiated the dispute investigation both have the option to appeal the decision and follow Measurement Canada's appeal process.

G. Transformer Loss Allowance

A transformer loss allowance is applicable to Customers, excluding Embedded Distributors and Direct Customers, requiring a billing adjustment for transformer losses as a result of being metered on the primary side of a transformer. The OEB-approved transformer loss allowance is as set out in the Rate schedules available at **www.HydroOneNetworks.com**.

H. Customer-Supplied Transformation Allowance

Customer-supplied transformation allowance is applicable to Standard Customers and Sub-transmission Customers who are demand-billed and providing their own transformers. The OEB-approved Customer-supplied transformation allowance is as set out in the Rate schedules available at **www.HydroOneNetworks.com**.

I. Annual Monitoring of Electricity Usage

For energy only metered non-residential customers, annual consumption will be monitored to identify services that have grown beyond 150,000 kilowatt-hours annually and require a demand meter to be installed.

For demand metered customers, measured demand is monitored during the calendar year to determine whether the account should be reclassified for billing purposes. The review occurs in the first quarter of the year, with the measurement period being January 1 through December 31 of previous year and average monthly demand is calculated based on the measurements taken for bills issued within that time period.

Reclassification of an account, with no retroactive adjustment, will occur effective the next scheduled bill after the annual review, if the average monthly demand over the calendar year crosses the 50 kW threshold for demand billing, or the 5000 kW threshold between General Service, Sub-transmission Customers or “T” class customers and Direct Customers or Large Users.

Alternatively, where a demand metered customer requests Hydro One to do a review, the calculation will be based on the average monthly demand over the most recent 12 month period and the account will be reclassified, as appropriate, effective the next scheduled bill following the review.

J. Billing Determinants for Demand Customers

Hydro One establishes billing determinants for demand customers at the greater of 100 per cent of kW and 90 per cent of kVA where kVA metering is installed. When a Customer’s power factor is known to be less than 90 per cent, a kVA meter or other equivalent electronic meter shall be used for measuring and billing.

2.4.5. Payments and Overdue Account Interest Charges

A. Payment Options

Customers may pay their electricity bills using any of the following methods: cheque or money order mailed with the remittance stub portion of the bill to Hydro One at the address on the stub; in person at most Canadian financial institutions; through automated banking machines, telephone banking or Internet bill payment services offered through the Customer's financial institution. All payments must be in Canadian dollars.

Hydro One also offers a pre-authorized payment option.

B. Late Payment Charges

Bills are due on the billing date. A late payment charge is applied and shall be paid by the Customer if payment is not received within twenty-one (21) days of the billing date. Hydro One's late payment charge is 1.5% per month, compounded monthly (19.56% per year). Late payments are calculated from the billing date to the date the next bill is issued. The late payment charge of 1.5% is applied to the outstanding balance. If partial payment is made within twenty-one (21) days of the billing date, the late payment charge will apply only to the amount outstanding after deducting the partial payment. Late payment charges will be added to the Customer's next bill.

2.5. Customer Information

A. Retail Settlement Code Requirements

Hydro One shall provide current and historical usage information to Customers and retailers in accordance with Chapter 11 of the Retail Settlement Code.

Customers with remotely read Interval Meters shall have access to meter usage data in accordance with Section 2.3.7.3 or over the Internet after having obtained a password from Hydro One for secure access.

Current Usage Data

Customers with cumulative volume, demand and non-remotely read Interval Meters shall receive their current usage data on their electricity bill from Hydro One.

Customers with remotely read or non-remotely read Interval Meters shall have access to meter usage data in accordance with the Read Only Access agreement to be executed by Hydro One and the Customer and in accordance with the standards set out in the Retail Settlement Code. Key provisions of the Read Only Access Agreement are described in Appendix “A” to these Conditions of Service.

Hydro One will provide access to a Customer’s meter or meter information under the following conditions:

(i) Hydro One will select the access windows it requires to read the meter;
(ii) if Hydro One’s access to the meter is hindered or a Customer’s access to the meter corrupts usage information, Hydro One may suspend a Customer’s right to access until any outstanding problems are resolved;
(iii) the Customer shall pay the reasonable cost of any software, hardware and other services required for a Customer to obtain direct access to meter information. This may include installation of a secondary meter access system;
(iv) the Customer shall bear any cost incurred by Hydro One to correct problems caused by a Customer’s direct access to the meter;
(v) if the Customer assigns his or her right to direct meter access to a Retailer or third party, the Customer shall be responsible for the actions of the assigned party.

Meter information generated by Smart Meters will not be accessible for Customers until Hydro One elects to implement time-of-use pricing and will not be accessible for Retailers until the OEB declares smart meters as MIST Meters.

Historical Information

Provision of Customer-specific information to retailers through the Electronic Business Transaction (EBT) system shall be provided at no charge. Requests to deliver data directly to Retailers and Customers, if not delivered through the EBT System, shall be honoured twice a year, at no direct charge to a Retailer or Customer. Additional requests shall also be honoured, but Hydro One may, at its discretion, charge a reasonable fee for such additional requests. A request is considered to be data delivered to a single address.

Hydro One will provide a Customer with at least 12 months, where available, of historical usage information, information about the Customer’s meter configuration, and payment information (“Historical Information”). The Historical Information can be released to the Customer or any third party designated by the Customer, subject to the following:

(i) if the third party is a Retailer, the Customer has provided the Retailer with written authorization for the release; or

(ii) if the third party is someone other than a Retailer, the Customer shall have provided Hydro One with written authorization for the release.

B. Protection of Individual Privacy and Consumer Information

(i) Privacy Legislation and the Licence

Hydro One is subject to provincial and federal privacy legislation that contains specific restrictions concerning the collection, use and disclosure of Personal Information.

In addition, the Licence prohibits Hydro One from disclosing information regarding a Customer to any other party without the written consent of the Customer, except where such information is required to be disclosed:

(a) to comply with any legislative or regulatory requirements, including the conditions of the Licence;

(b) for billing, settlement or market operation purposes;

(c) for law enforcement purposes; or

(d) to a debt collection agency for the processing of past due accounts of the Customer.

The Licence permits Hydro One to disclose information regarding a Customer where the information has been sufficiently aggregated such that the Customer's particular information cannot reasonably be identified.

(ii) Hydro One's Collection, Use and Disclosure of Customer Information

Hydro One collects information about its Customers, including Personal Information (collectively, "Customer Information"), primarily directly from its Customers, whether verbally, in writing or via the www.hydroone.com website; however, it may also collect from other sources, including credit bureaus or personal references. This information collected is primarily:

- information establishing identity (for example: name, address, phone number, date of birth, etc.);
- information related to the provision of electricity and/or distribution services by Hydro One and other electricity distributors; and
- information about financial behaviour, such as payment history and creditworthiness.

Hydro One collects the information described above for the following purposes:

(a) to establish and maintain responsible commercial relations and operations, including for purposes of billing and debt collection and for assessing Customer credit history from time to time to determine whether Hydro One requires a security deposit;

(b) to understand Customer needs and eligibility for products and services;
(c) to recommend particular products and services to meet a Customer's needs;
(d) to develop, enhance, market or provide electricity products and services;
(e) to manage and develop Hydro One's businesses and operations;
(f) to meet legal and regulatory requirements; and
(g) to provide Customers with information about the electricity market and rates.

Hydro One does not trade or sell Customer Information to others. Hydro One shall not use or disclose Customer Information for purposes other than those for which it was collected, except with the Customer's consent or as required by law.

The information will be used and disclosed internally within Hydro One by and among staff members (for example, its customer care staff and its internal auditors) that need the information in the performance of their duties and where the use and disclosure is necessary and proper in the discharge of Hydro One's business.

In some instances, Customer Information will be shared with third party service providers who perform services on Hydro One's behalf, such as customer service, outage management, data storage, data cleansing and the like. These third party service providers are given only the information necessary to perform those services that Hydro One has contracted them to provide. Additionally, they are prohibited from storing, analyzing or using that information for purposes other than the services they have been contracted to provide. Hydro One uses contractual means to require such service providers to protect Customer Information from loss, theft and unauthorized access, use, disclosure and otherwise in a manner consistent with the privacy policy and practices established by Hydro One. In the event our service provider is located outside of Canada, the service provider is bound by, and Personal Information may be disclosed in accordance with, the laws of the jurisdiction in which the service provider is located.

In order to measure performance and develop service improvements, Hydro One may disclose Customer information to third party service providers for the purpose of conducting surveys on Hydro One's behalf. The providers are bound by strict confidentiality contracts to use the information for the sole purpose of the survey. Customers may choose not to have their information released by Hydro One to a service provider for survey purposes, by contacting 1-888-664-9376.

(iii) Access to Personal Information

Hydro One retains Personal Information only as long as necessary for the fulfillment of the purposes described in this Section.

Customers may obtain access to their Personal Information held by Hydro One at any time and review its content and accuracy, and have it amended as appropriate.

However, access may be restricted as permitted or required by law. Customers can request access by contacting 1-888-664-9376.

Further information about Hydro One's practices and procedures concerning the collection, use and disclosure of Personal Information can be found in Hydro One's Privacy Code (available at www.HydroOneNetworks.com).

SECTION 3 CUSTOMER CLASS SPECIFIC

3.1 Residential and Farm

Under Section 79 of the *Ontario Energy Board Act* and associated regulations, qualifying year-round residences and farms are eligible to receive rural or remote electricity rate protection. The monthly service charge amount for eligible Customers is reduced by the applicable rural or remote electricity rate protection.

A. Residential-Year-Round

This Rate classification is applied to a Customer's main place of abode and may include additional buildings served through the same meter, provided they are not rental income units. To be classified as year-round residential, all of the following criteria must be met:

(i) the property must be the Customer's principal residence as defined in the *Income Tax Act*, and the Customer must state that fact in writing;
(ii) the Customer must live in this residence for at least four (4) days of the week for eight (8) months of the year and the Customer does not reside anywhere else for more than three (3) days a week during eight (8) months of the year;
(iii) the address of this residence must appear on the Customer's driver's licence and credit card invoices and as the Customer's mailing address on the Customer's electricity bill and property tax bill, etc.; and
(iv) Customers who are eligible to vote in Provincial or Federal elections must be enumerated for voting purposes at the address of this residence.

Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) normally shall be classified as Industrial Commercial General Service; however, up to four residential units may, at Hydro One's discretion, be classified as Residential-Year-Round.

A.1 Residential UR2

Customers classified as Residential UR2 are year-round residences in an urban density zone or Farm Single Phase Energy Billed Customers in an Urban Density Zone.

A.2 Residential R1

Customers classified as Residential R1 are year-round residences in a High Density Zone.

A.3 Residential R2

Customers classified as Residential R2 are year-round residences in a normal density zone.

A.4 Seasonal Residential R3

This Rate classification includes any residential service not meeting the residential-year-round criteria. As such, the seasonal residential class includes cottages, chalets, and camps. Customers classified as Seasonal Residential R3 are residences that have seasonal occupancy in High Density Zone.

A.5 Seasonal Residential R4

This Rate classification includes any residential service not meeting the residential-year-round criteria. As such, the seasonal residential class includes cottages, chalets, and camps. Customers classified as Seasonal Residential R4 are residences that have seasonal occupancy in Normal Density Zone.

A.6 Residential (Acquired Local Distribution Companies)

All service supplied to single-family dwelling units for domestic or household purpose shall be classified as residential service. Multi-unit residential establishments such as apartment buildings supplied through one service (bulk metered) will normally be classified as general service, but, at Hydro One's discretion, up to four residential units may be classified as residential.

Where electricity service is provided to combined residential and business (including agricultural usage) and the wiring does not provide for separate metering, the classification shall be at the discretion of Hydro One, based on such considerations as the estimated predominant consumption.

B. Farm

This Rate classification is applicable to properties actively engaged in agricultural production as defined by Statistics Canada. Services to year-round pumping stations or other ancillary services remote from the main farm shall also be classed as farm. The Farm Service Rate classification does not include tree, sod, or pet farms.

B.1. Farm Single Phase F1

Single Phase F1 Farm Customers are actively engaged in agricultural production in areas other than Urban Density Zones.

B.2. Farm Three Phase F3

Three Phase F3 Farm Customers are actively engaged in agricultural production in areas other than Urban Density Zones.

C. Low Use Secondary Service

Applicable to separately metered services that were connected prior to January 1, 1996, and located on the same contiguous property as the main or primary service, supplied from the same transformer, with the same owner and consuming less than the threshold levels specified in the following table. The distribution basic monthly service charge is not applied.

Primary Service Classification	Low Use Secondary Service Classification	Secondary Service Annual Usage Threshold
R1 R2	R3, R4 G2, F (non-RRP)	<1500 kWh/ year
R3 R4	R3, R4 G2, F (non-RRP)	<500 kWh/year
G F	R3, R4 G2, F (non-RRP)	<2500 kWh/year

D. Connection and Upgrade Charges

A Residential, Seasonal Residential or Farm Customer who makes a written request for a Connection and whose building lies along Hydro One's existing distribution lines shall pay Hydro One Connection charges in accordance with Section 2.1.1.

A Residential, Seasonal Residential or Farm Customer who makes a written request for a Connection and whose building is within Hydro One's service area shall pay Hydro One Connection charges in accordance with Section 2.1.2.

A Residential, Seasonal Residential or Farm Customer who requests an upgrade in connection assets at its premises shall pay the net cost of upgrading the connection assets that is in excess of the cost of supplying distribution transformation or metering. The cost of modifications to the Distribution System due to the upgraded Connection will be in accordance with Section 2.1.2.

E. Ownership Demarcation Point and Operational Demarcation Point

For Secondary Services wholly-owned and maintained by Hydro One, the Ownership Demarcation Point and the Operational Demarcation Point shall be located at:

(i) the top of the Customer's service entrance stack for overhead connections;
(ii) the line side of the Customer's meter base for underground connections; and
(iii) the metering point for a central-metered service.

For Secondary Services wholly owned and maintained by the Customer, the Ownership Demarcation Point and the Operational Demarcation Point is the secondary connection at the transformer or the service bus.

Maintenance of the portion of the Secondary Service owned by Hydro One includes repair and like-for-like replacement of a wire or cable that has failed irreparably. The Customer is responsible for all civil work, supports, vegetation and landscaping associated with any such repair or replacement of the portion of Secondary Service owned by Hydro One.

For Primary Service Residential and Farm Customers, the Ownership Demarcation Point shall be located at the primary live line clamp or line switch.

Where the Customer has ownership of a primary disconnecting device, this device shall be the Operational Demarcation Point, which shall be under the operating control of Hydro One.

F. Customer-Supplied Secondary Wire

The Customer shall install, own, and maintain the secondary conductor under any of the following conditions:

(i) conductor terminations are inside the Customer's building;
(ii) conductor is installed beyond the service entrance;
(iii) conductor is connected to a Primary Service; or
(iv) conductor is a non-standard installation.

G. Residential, Seasonal Residential and Farm Single Phase F1 Customers

Voltage

For residential, seasonal residential and Farm Single Phase F1 Customers, the nominal supply voltage shall be 120/240 Volt single-phase.

Metering

To accommodate Hydro One's meter installation, the Customer shall make provision as follows:

(i) Where the rating of a Customer's main disconnecting device does not exceed 200 A, the Customer shall provide a 120/240 V, 200 A, single phase 4-jaw outdoor meter socket connected on the line side of the main disconnecting device.

(ii) Where the rating of a Customer's main disconnecting device does not exceed 400 A, the Customer shall provide an outdoor combination meter socket and metering transformer enclosure connected on the line side of the main disconnecting device and equipped with:

- 120/240 V, 10 Amp – 5-jaw meter socket with automatic circuit-closing device; and
- 400 Amp revenue-metering current transformer.

The meter installation shall be installed in a location acceptable to Hydro One.

For metering installed on poles, the pole will be installed, owned and maintained by the Customer.

H. Farm Three Phase F3 Customers

Voltage

For Farm Three Phase F3 Customers, the nominal supply voltage shall be 120/208 volts 4 wire or 347/600 volts 4 wire.

Metering

To accommodate Hydro One's meter installation, the Customer shall provide acceptable equipment in accordance with one of the following arrangements, as determined by Hydro One:

(i) 208/120 V, 200 A, 3-phase 7-jaw meter socket connected on the load side of the main disconnecting device; or

(ii) 600/347 V, 200 A, 3-phase 7-jaw indoor meter socket with an insulated neutral jaw, and connected on the load side of the main disconnecting device.

(iii) The meter installation shall be installed in a location that is acceptable to Hydro One.

(iv) Metering for 347/600 V, 3 phase four wire circuits that only have 1 metering point per service entrance shall use transformer rated metering using 3 CTs and 3 PTs.

(v) Metering for 347/600 V, 3 phase four wire circuits that have more than 1 metering point per service entrance may use self contained metering up to 200 A on the load side of the customer's service entrance, in conformity with the requirements of the Electrical Safety Code.

3.2. Industrial Commercial

These Rate classifications are applicable to any service that does not fit the description of the year-round residential, seasonal residential or farm classes. Generally, it is composed of commercial, industrial, educational, administrative, auxiliary and government type services. It includes combination-type services where a variety of uses are made of the service by the owner of one property, and all multiple services except residential with up to four units.

A. Industrial Commercial General Service

These Rate classifications are applicable for Industrial Commercial customers not directly supplied by the Sub-transmission System.

A.1. Industrial Commercial General Service, Urban Density UG2

This Rate classification is applicable to Single or Three Phase Industrial Commercial General Service or Farm Customers located in an Urban Density Zone.

A.2. Industrial Commercial General Service, Single Phase G1

This Rate classification is applicable to Industrial Commercial General Service Single Phase Customers that are not located in an Urban Density Zone.

A.3. Industrial Commercial General Service, Three Phase G3

This Rate classification is applicable to Industrial Commercial General Service Three Phase Customers not located in an Urban Density Zone.

A.4. Lighting

This Rate classification is applicable to street lighting and unmetered sentinel lights.

B. Industrial Commercial Sub-transmission or T-Class

This Rate classification is applicable to Industrial Commercial Customers supplied directly from the Sub-transmission System.

C. General Service (Acquired Local Distribution Companies)

All service supplied to premises other than those classified as residential, lighting or large use shall be classified as general service.

D. Low Use Secondary Service

Applicable to separately metered services that were connected prior to January 1, 1996, and located on the same contiguous property as the main or primary service, supplied from the same transformer, with the same owner and consuming less than the threshold levels specified in the following table. The distribution basic monthly service charge is not applied.

Primary Service Classification	Low Use Secondary Service Classification	Secondary Service Annual Usage Threshold
R1 R2	R3, R4 G2, F (non-RRP)	<1500 kWh/ year
R3 R4	R3, R4 G2, F (non-RRP)	<500 kWh/year
G F	R3, R4 G2, F (non-RRP)	<2500 kWh/year

E. Large Use (Acquired Local Distribution Companies)

Individual Customers whose monthly measured maximum demand (kW) averaged over the most recent 12 consecutive months is equal or greater than 5,000 kW shall be classified as a large use Customer.

F. Connection and Upgrade Charges

A General Service Customer who makes a written request for a Connection and whose building lies along Hydro One's existing distribution lines shall pay Hydro One Connection charges in accordance with Section 2.1.1.

A General Service Customer who makes a written request for a Connection and whose building is within Hydro One's service area shall pay Connection charges in accordance with Section 2.1.2.

A General Service Customer who requests an upgrade in connection assets at its premises shall pay Hydro One the net cost of upgrading the connection assets that is in excess of the cost of supplying distribution transformation or metering. The Customer shall enter into a Connection and Cost Recovery Agreement with Hydro One. The cost of modifications to the Distribution System, due to the upgraded Connection, will be in accordance with Section 2.1.2.

G. Ownership Demarcation Point and Operational Demarcation Point

For Secondary Service General Service Customers, the Ownership Demarcation Point and Operational Demarcation Point shall be located as follows:

(i) where the Customer's conductors emerge from the service head or mast on overhead Secondary Services, or at the secondary terminal (spade) of the transformer, or at the secondary connection pedestal located at the property line, as determined by Hydro One at the Customer's location; or
(ii) on underground Secondary Services, at the secondary terminal (spade) of the transformer.

For Primary Service General Service Customers, the Ownership Demarcation Point shall be located at the primary live line clamp or line switch.

Where the Customer has ownership of a primary disconnecting device, this device shall be the Operational Demarcation Point, which shall be under the operating control of Hydro One.

H. Voltage

For Secondary Service General Service Customers, Hydro One supplies electricity at the following nominal voltages and phases, where available:

(i) 347/600Y Volts 3-phase 4 wire;
(ii) 120/208Y Volts 3 phase 4 wire; or
(iii) 120/240 Volts 1-phase.

The Customer shall consult with Hydro One early to confirm availability of specific voltages within the Hydro One Distribution System.

For Primary Service General Service Customers, Hydro One supplies electricity at the following nominal voltages and phases, where available:

(a) 44,000 Volts – 3 Phase 3 Wire;
(b) 16,000/27,600 Volts – 3 Phase 4 Wire;
(c) 14,400/25,000 Volts – 3 Phase 4 Wire;
(d) 8,000/13,800 Volts – 3 Phase 4 Wire;
(e) 4,800/8,320 Volts – 3 Phase 4 Wire; or
(f) 2,140/4,160 Volts – 3 Phase 4 Wire

I. Metering

Metering Equipment

To accommodate Hydro One's meter installation, the Customer shall provide acceptable equipment in accordance with one of the following arrangements, as determined by Hydro One:

Self-Contained Metering Up to 200 A

A self-contained meter installation at low voltage where the rating of the Customer's main disconnecting device does not exceed 200 A shall be provided with:

(i) 120/240 V, 200 A, 1-phase 4-jaw outdoor meter socket connected on the line side of the main disconnecting device;
(ii) 208/120 V, 200 A, 1-phase 5-jaw indoor meter socket connected on the load side of the main disconnecting device;
(iii) 208/120 V, 200 A, 3-phase 7-jaw meter socket connected on load side of the main disconnecting device; or
(iv) 600/347 V, 200 A, 3-phase 7-jaw indoor meter socket with an insulated neutral jaw, and connected on the load side of the main disconnecting device; and
(v) metering for any 3 phase secondary voltages other than those specified should use transformer rated metering.

120/240 V, 400 A

A General Service single-phase transformer-type meter installation at 120/240 V where the rating of the Customer's main disconnecting device ranges from greater than 200A up to 400 A shall be provided with:

(i) 120/240 V, 10 A, 5-jaw meter socket connected on the line side of the main disconnecting device with an automatic circuit-closing device;
(ii) indoor instrument transformer enclosure; and
(iii) 19 mm conduit from the instrument transformer enclosure to the meter socket.

Three-Phase Less than 200 kW

A three-phase transformer-type meter installation that is not equipped with interval meters and where the monthly average peak demand during a calendar year is forecasted by Hydro One not to exceed 200 kW shall be provided with:

(i) an acceptable outdoor meter enclosure;
(ii) an indoor instrument transformer enclosure; and
(iii) 25 mm conduit from the instrument transformer enclosure to the meter enclosure.

Three-Phase Greater than 200 kW

A transformer-type meter installation where the monthly average peak demand during a calendar year is forecasted by Hydro One to exceed 200 kW and where the rating of the Customer's main disconnecting device does not exceed 3000 A at low voltage shall have an interval meter and shall be provided with:

(i) an acceptable meter enclosure;
(ii) an indoor instrument transformer enclosure;
(iii) 31 mm of conduit from the instrument transformer enclosure to the meter enclosure; and
(iv) a voice grade direct access telephone line that is active 24 hours every day, seven days per week, and protected by a 13 mm conduit from the telephone entrance equipment into the meter enclosure.

Instrument Transformer Enclosure

A Customer who requires a transformer-type meter installation shall provide a metal instrument transformer enclosure that is:

(i) equipped with a hinged door, provision for securing of the transformers to the enclosure, and padlock hasp or other means of rendering the enclosure inaccessible to unauthorized persons;
(ii) connected on the load side of the main disconnecting device;
(iii) sized as follows:

- 120 Volt single phase service: Over 200 Amperes up to and including 400 Amperes - 1.0 m x 1.0 m x 0.3 m (36" x 36" x 12"); Over 400 Amperes - 1.2 m x 1.2m x 0.3m (48" x 48" x 12")
- 120/208 Volt three phase four wire service: Over 200 Amperes up to and including 600 Amperes - 1.2 m x 1.2 m x 0.3 m (48" x 48" x 2")
- 347/600 Volt three phase four wire services: Over 200 Amperes up to and including 600 Amperes - 1.2 m x 1.2 m x 0.3 m (48" x 48" x 12")

  Where a cabinet is required for meters only, the dimensions will be 0.61 m x 0.412 m x 0.257 m (24" x 16.2" x 10.1")
- 347/600 V, 3 phase four wire circuits that only have 1 metering point per service entrance shall use transformer rated metering using 3 CTs and 3 PTs; and

(iv) provided with one of the following meter loop arrangements - Spare conductors not less than 450 mm in length, equipped with connectors supplied and terminated by the Customer at each bar-type current transformer connection point, or three-phase conductors installed through ring-type current transformers, or other acceptable provision for connection of current transformers.

Multi-Occupancy Metering

The meter installation for a multiple occupancy structure where the Customer requires individual meters and where the rating of the main disconnecting device exceeds 400 A shall satisfy the following requirements:

(i) Meters shall be installed in a central service room with access as per Section 1.7.1 Space and access.

(ii) The central service room shall be separated from the remainder of the building by an approved fire separation.

(iii) Any splitter trough cover shall be hinged to open downward and equipped with provision for padlock and seal.

(iv) A full-sized neutral supply conductor shall be extended from any splitter trough to each meter socket.

(v) The conductors to each meter shall be provided with a separate sub-service box.

(vi) Sub-service boxes shall be identified with an approved address or unit number and the same number shall identify the service panel inside the unit.

(vii) Metering for 347/600 V, 3 phase four wire circuits that have more than 1 metering point per service entrance may use self contained metering up to 200A on the loadside of the Customer's service entrance in conformity with the requirements of the Electrical Safety Code.

3.3. Direct Customers

This Rate classification is applicable to Direct Customers, who may or may not be Wholesale Market Participants.

A. Connection and Upgrade Charges

A Direct Customer who makes a written request for a Connection and whose building lies along Hydro One's existing distribution lines shall pay Hydro One Connection charges in accordance with Section 2.1.1.

A Direct Customer who makes a written request for a Connection and whose building is within Hydro One's service area shall pay Connection charges in accordance with Section 2.1.2.

A Direct Customer who requests an upgrade in connection assets at its premises shall pay Hydro One the net cost of upgrading the connection assets that is in excess of the cost of supplying metering. The Customer may be required to enter into a Connection and Cost Recovery Agreement with Hydro One. The cost of modifications to the Distribution System, due to the upgraded Connection, will be in accordance with Section 2.1.2.

B. Ownership Demarcation Point and Operational Demarcation Point

For Direct Customers, the Ownership Demarcation Point and Operational Demarcation Point shall be:

a) located at the primary live line clamp or line switch, or

b) where the Customer has ownership of a primary disconnecting device, this device shall be the Operational Demarcation Point, which shall be under the operating control of Hydro One, or

c) as specified in the Connection Agreement.

C. Voltage

The Customer shall consult with Hydro One early to confirm availability of specific voltages within the Hydro One Distribution System.

For Direct Customers, Hydro One supplies electricity at the following nominal voltages and phases, where available:

(i) 44,000 Volts – 3 Phase 4 Wire;
(ii) 16,000/27,600 Volts – 3 Phase 4 Wire;
(iii) 14,400/25,000 Volts – 3 Phase 4 Wire; or
(iv) 8,000/13,800 Volts – 3 Phase 4 Wire.

D. Metering

For Direct Customers, metering shall be specified in the Connection Agreement.

3.4. Embedded Distributors

This Rate classification is applicable to Embedded Distributors, who may or may not be Wholesale Market Participants.

The reliability of supply and the voltage level at the Delivery Point from the Distribution System to an Embedded Distributor's distribution system shall be as good as or better than what is provided to Hydro One's other distribution Customers.

The Embedded Distributor shall provide load forecasts or any other information related to the Embedded Distributor's system load to Hydro One, as determined and required by Hydro One. Hydro One shall not require any information from another Distributor unless it is required for the safe and reliable operation of either the Distribution System or to meet the obligations contained in the Licence.

An Embedded Distributor shall notify Hydro One when the former has received a formal connection impact assessment request from anyone wishing to connect an Embedded Generations Facility within the former's service area.

Hydro One will make every reasonable effort to respond promptly to another Distributor's written request for a Connection to the Distribution System and shall comply with all of the requirements of Connection as identified in section 6.3 of the Distribution System Code.

The Embedded Distributor seeking a Connection shall pay all costs of consultations, preparation of estimates, system impact studies and design. The Connection costs, costs of system modifications and of commissioning and testing necessary to connect the Distributor as well as all ongoing administration, settlement and maintenance costs will be included in the DCF calculation. The Distributor will provide a load forecast acceptable to Hydro One, which will be used in the determination of the distribution revenues collected over the revenue horizon. Any shortfall calculated by the DCF calculation shall be paid by the Distributor seeking the Connection.

The Embedded Distributor may be required to sign a Connection and Cost Recovery Agreement with Hydro One.

A. Connection and Upgrade Charges

An Embedded Distributor who makes a written request for a Connection shall pay Connection charges in accordance with Section 2.1.2.

An Embedded Distributor who requests an upgrade in connection assets at its premises shall pay Hydro One the net cost of upgrading the connection assets that is in excess of the cost of supplying distribution transformation or metering. The Customer shall enter into a Connection and Cost Recovery Agreement. The cost of modifications to the Distribution System, due to the upgraded Connection, will be in accordance with Section 2.1.2.

B. Ownership Demarcation Point and Operational Demarcation Point

For an Embedded Distributor, the Ownership Demarcation Point and the Operational Demarcation Point shall be specified in the Operating Schedule of the Connection Agreement.

C. Voltage

The Embedded Distributor shall consult with Hydro One early to confirm availability of specific voltages within the Hydro One Distribution System.

For Embedded Distributor, Hydro One supplies electricity at the following nominal voltages and phases, where available:

(i) 44,000 Volts – 3 Phase 4 Wire;
(ii) 16,000/27,600 Volts – 3 Phase 4 Wire;
(iii) 14,400/25,000 Volts – 3 Phase 4 Wire; or
(iv) 8,000/13,800 Volts – 3 Phase 4 Wire.

D. Metering

For Embedded Distributors, metering shall be specified in the Connection Agreement.

3.5. Embedded Generation Facilities

The process and time line associated with connecting an Embedded Generation Facility to the Distribution System (< 50 kV) can be found in the Distribution System Code at the Ontario Energy Board web site (www.oeb.gov.on.ca). The Distribution System Code also identifies the size categories for these Generation Facilities. The categories are outlined below:

Embedded Generation Facility Classification	Name-Plate Rated Capacity
Micro	≤ 10 kW
Small	(a) ≤ 500 kW connected on distribution system voltage < 15 kV (b) ≤ 1 MW connected on distribution system voltage ≥ 15 kV
Mid-Sized	(a) ≤10 MW but > 500 kW connected on distribution system voltage < 15 kV (b) > 1 MW but ≤ 10 MW connected on distribution system voltage ≥ 15 kV
Large	> 10 MW

Hydro One requires all Customers with Generation Facilities connected to the Distribution System and all Generators wishing to connect to the Distribution System to execute a Connection Agreement in the applicable form prescribed in Appendix "E" of the *Distribution System Code* and/or such other agreements as may be reasonably required by Hydro One in the circumstances as described in Appendix "E" of the *Distribution System Code* as "Other Potential Contracts".

Generators with Embedded Generation Facilities connected to the Distribution System prior to the date of these Conditions of Service shall, subject to any agreement to the contrary between the Generator and Hydro One, execute a Connection Agreement with Hydro One within a reasonable period of time. During the time when such an agreement is not yet in place, the Generator will be deemed to have an implied contract with Hydro One. The terms of the implied contract are these Conditions of Service, the Electricity Distribution Rate Handbook, the Hydro One rate schedules, the Licence and the Distribution System Code.

In accordance with Section 2.2 of these Conditions of Service, Hydro One may disconnect any Generator that does not execute a Connection Agreement.

Hydro One shall not allow connections of Embedded Generation Facilities to the Distribution System in a manner that may adversely affect power quality, reliability or the safety of Hydro One's personnel or Customers.

The Generator shall be responsible for all costs associated with Hydro One performing studies, developing and implementing plans for risk mitigation that are to the satisfaction of Hydro One.

If an existing Generator proposes to materially change the mode of operation, the installed capacity and /or the protective devices, the Generator must submit the information required for reassessment of the impact of the operation of the Embedded Generation Facility prior to making such changes.

A. General Technical Information Requirements & Connection Impact Assessment (CIA)

All Generators shall provide Hydro One with the documentation specified in the Application for Connection of Generating Facilities to ensure that the Distribution System is adequately protected from potential damage or increased operating costs resulting from the connection of the Embedded Generation Facility.

The potential impacts on Hydro One's distribution system and any required mitigation measures as a result of proposed Embedded Generation Facilities with a proposed name-plate rated capacity greater than 500 kW will be determined with a Connection Impact Assessment. The cost of completing the CIA will be paid by the Generator. There may be circumstances where the threshold requiring a CIA is less than 500 kW. More information regarding the CIA process and associated costs can be obtained at Hydro One's website:

http://www.hydroonenetworks.com/en/customers/generators/generation_connections/distribution/default.asp

Generators connected to the Distribution System prior to the date of these Conditions of Service shall have the technical information required in the application and assessment process on file and provide the information to Hydro One upon request.

B. Interface Protection and Isolating Devices

The Generator shall provide an interface protection for their Embedded Generation Facility that minimizes the frequency and severity of disturbances on the Distribution System and the impact to the reliability and power quality of service to other Customers. Embedded Generation Facilities must also meet the technical requirements as identified in the document "Technical Requirements for Generators Connecting to Hydro One's Distribution System." Additional requirements may be necessary to address unique situations.

The Generator shall provide, install and maintain a disconnecting device at the connection point with the Distribution System for the purpose of isolating the Embedded Generation Facility in case of Emergency and for work protection. The disconnecting device shall be installed in accordance with the Electrical Safety Code.

C. Metering for Embedded Generation Facilities

Metering Installations – Installed after July 14, 2000

The metering shall be installed at the Ownership Demarcation Point of the Connection of the Embedded Generation Facility to the Distribution System. If this is not practical, Hydro One shall apply loss factors to the generation output in accordance with the loss factors applied for Retail settlements and billing. The Operational Demarcation Point for an Embedded Generation Facility is the primary live line clamp or lines switch that is installed on or at Hydro One's Distribution line.

The Generator shall install metering in accordance with the Distribution System Code, Hydro One's standard metering requirements, and Hydro One's policy for embedded generator metering, NOP-041, located at www.HydroOneNetworks.com. The Generator shall provide Hydro One with the technical details of the Meter Installation.

Metering Installations – Installed Prior to July 14, 2000

Where there is an existing Meter Installation for an Embedded Generation Facility, the Generator shall pay the cost of upgrades required for the Meter Installation to be in accordance with Hydro One's standard metering requirements by no later than the meter seal expiry date.

Embedded Generation Facilities that receive energy (e.g. for station use or backup supply) shall be placed in the appropriate Rate class and billed for the energy consumed.

D. Transformers

Any step-up transformation equipment required to step-up the Embedded Generation Facility's output voltage to the primary voltage of Hydro One's Distribution line shall be supplied, installed, owned and maintained by the Generator.

Customers connected to the Distribution System that wish to connect an Embedded Generation Facility to the Hydro One distribution system may be permitted at Hydro One's sole discretion to be connected through Hydro One's existing distribution transformer, provided the net reverse power flow through the transformer is within the reverse flow limit established by Hydro One. The transformation supplied by Hydro One for such Customers, dependent upon the rate class of the Customer, is subject to the limitations noted in Section 2.1 and is sized solely upon the expected load to be supplied at the Customer's premise. The cost of any incremental transformation and associated impacts on the Hydro One distribution system shall be paid by the Customer.

E. Maintenance Schedules

The Generator must implement and adhere to a regular scheduled maintenance plan to assure both Hydro One and the Generator that the connection devices, protection and control systems are maintained in good working order. The provisions of said maintenance plan are to be listed in the Connection Agreement. The Generator must conduct a re-verification at least every 48 months (or as specified in the Connection Agreement) and provide a written report to Hydro One signed by professional licensed engineer. A verification report of maintenance activities including the operation of devices shall be retained by the Generator and shall be provided to Hydro One upon request.

Hydro One, in its sole discretion, may require the Generator to permit Hydro One to witness the re-verification of any protections that could adversely affect the Distribution System. The Generator shall pay for the re-verification and provide Hydro One a copy of the report giving the results of the re-verification of the protections.

F. Reporting Requirements

All Embedded Generation Facilities over 100kVA shall report any significant event to Hydro One within five business days. The Connection Agreement may include a list of events deemed significant and provide a standard report format.

The Generator shall keep a written log of the operation of the Embedded Generation Facility's protections that result in the tripping of the facility's interrupting devices. On request, the Generator must provide a copy of the log to Hydro One. The log shall contain, at a minimum, the following information:

(i) date and time of event/operation of protections;
(ii) which relay or protection feature of the relay initiated the trip;
(iii) conditions and unit output at the time of the trip that may be related to the operation (e.g. lightning, outage of feeder, etc.).

G. Capital Contribution

When Hydro One is required to add new Hydro One Facilities and Equipment, alter existing Hydro One Facilities and Equipment, or increase the capacity of the Distribution System to connect a new Embedded Generation Facility (an "Expansion"), Hydro One will perform an economic evaluation to determine the

Generator's required capital contribution for the equipment, labour and ongoing maintenance costs of the Expansion (the "Expansion Costs"). Hydro One will use the Discounted Cash Flow Model and assume that future revenue will be zero.

H. Compliance

All Embedded Generation Facility equipment connected, operating or procured before July 14, 2000, is deemed to be in compliance with Hydro One's performance requirements except for the requirements of the Electrical Safety Authority and isolating device requirements identified in section 3.5.2.

Hydro One may require that the equipment deemed compliant above be brought into actual compliance with Hydro One's performance requirements within a timeframe established by Hydro One, but not to exceed 12 months, where, in Hydro One's sole opinion, there is:

(i) a material deterioration of the Distribution System reliability resulting from the performance of the Embedded Generation Facility equipment;
(ii) material negative impacts on the power quality of an existing or a new Customer resulting from the performance of the equipment at the Embedded Generation Facility; or
(iii) a material increase in Generating capacity at the site where the equipment deemed compliant is located.

I. Disconnection of Embedded Generation Facility

Hydro One has the right to disconnect an Embedded Generation Facility from its Distribution System where, where in the sole opinion of Hydro One, any of the following conditions, exist:

(i) there is a material deterioration of the Distribution System reliability resulting from the performance of the Embedded Generator's equipment;
(ii) there is a material negative impact on the quality of power of an existing or a new Customer resulting from the performance of the equipment at the Embedded Generation Facility;
(iii) the Embedded Generator has failed to re-verify the protection and control systems every 48 months or as specified in the Connection Agreement or failed to submit the report within 30 days;
(iv) the Embedded Generator's report of the re-verification of the protection and control systems shows deficiencies that are unacceptable to Hydro One;
(v) the Embedded Generator has made material changes in the capacity and /or the mode of operation of the Generation Facility, and the

impact to the Distribution System is deemed unacceptable to Hydro One;

(vi) the Embedded Generator has failed to meet any technical requirements, including those identified in the document "Technical Requirements for Generators Connecting to Hydro One's Distribution System."; or

(vii) the Embedded Generator has failed to provide any documentation as specified in the application and assessment process upon request.

3.6. Embedded Wholesale Market Participant

An Embedded Wholesale Market Participant is a Customer who is registered as a Wholesale Market Participant with the IESO and whose facility is not directly connected to the IESO Controlled Grid but is connected to the Distribution System. All Embedded Wholesale Market Participants within the service jurisdiction of Hydro One, once approved by the IESO, shall inform Hydro One in writing of their approved status 60 days prior to their participation in the IESO-administered market.

A Connection Agreement, including an operating schedule, will be required between an Embedded Wholesale Market Participant and Hydro One.

An Embedded Wholesale Market Participant will be responsible for the ownership, installation and maintenance of the meter and contracting the services of a Registered Meter Service Provider. Responsibility for an existing Meter Installation will transfer from Hydro One to the Embedded Wholesale Market Participant on the meter seal expiry date.

3.7. Embedded Distributor

Refer to Section 3.4 of these Conditions of Service.

3.8. Unmetered Connections

There are certain instances where Connections can be provided without metering. These loads are generally small in size and consistent in magnitude of load. Hydro One reserves the right to review all cases and may require that a meter be installed at its sole discretion.

Services that can be unmetered include cable TV amplifiers, telephone switching devices, phone booths, bus shelters, rail way crossing signals, traffic signals, and other small fixed loads. Only loads of less than 5 kW can be set up as unmetered. The Customer shall provide detailed manufacturer information and documentation with regard to electrical demand or consumption of the proposed unmetered load.

A completed load study acceptable to Hydro One may be required for determination of load and hours of usage.

At Hydro One's discretion, an agreement may be required between the Customer and Hydro One that identifies the Customer's obligations and responsibilities in notifying Hydro One of changes to existing equipment or new equipment and Connections added to the Distribution System by the Customer.

For installations on Hydro One-owned poles, Hydro One must approve the method of attachment and location of installations and the owner must enter into a Joint Use Agreement.

The billing of unmetered Connections will be based on estimated usage.

All unmetered Connections fall under the Industrial Commercial, Industrial Commercial General Service or Lighting Rate classifications.

Unmetered Connections may also include the following:

3.8.1. Street Lighting

This section pertains to the distribution and supply of electrical energy for street lighting. Street lights are devices owned by or operated for the road authority and/or the municipal corporation.

The energy consumption for street lights is estimated based on Hydro One's profile for street lighting load, which provides the amount of time each month that the street lights are operating. The energy charge is based on installed load.

Street lighting plant, facilities, or equipment owned by the Customer are subject to Electrical Safety Authority requirements.

Charges related to the connection of Street Lighting shall be paid by the Customer, at time and material rates.

Streetlights attached on Hydro One's line poles will require the owner to enter into an agreement to use such poles. The location and method of attachment is subject to Hydro One approval. Hydro One will make the electrical service connection of all streetlights to the Distribution System. The normal service voltage will be 120/240 volts, single-phase, three-wire.

The Customer will provide the secondary conductor to the supply point. Hydro One will install and connect the service conductor at the supply point.

3.8.2. Decorative Lighting

This section pertains to the distribution and supply of electrical energy for decorative street lighting installations. Such installations could be lighting for festive occasions or streetscaping. These are privately owned and maintained and subject to Electrical Safety Authority and Hydro One service conditions.

This section does not apply to street lighting that is owned by or operated by the road authority and/or the municipal corporation.

Hydro One shall determine if metering is required on a case-by-case basis with respect to the demand, load profile, location, accessibility, duration of the Connection, and municipal agreement.

The nominal service voltage will be 120/240 volts, single phase.

The method and location of the supply will vary and will be established for each application through consultation with Hydro One.

Charges for part time or decorative seasonal lighting include an energy charge calculated at dollars/kWh/month. Minimum billing will be for one month (Dollars per kWh x # of fixtures x kWh).

At Hydro One's discretion, an agreement may be required between the Customer and Hydro One that identifies the Customer's obligations and responsibilities in notifying Hydro One of new equipment and connections added to the Distribution System by the Customer.

3.8.3. Cablevision Power Supplies

This section pertains to the distribution and supply of electrical energy for cablevision power units. The standard service with no accessories (heaters or air conditioners, etc.) can be unmetered. A completed load study will be required, otherwise the account will be set up on full name plate rating. Energy consumption will be based on connected wattage on the line side power supply and based on twenty-four hours of use.

Power units that have additional accessories such as heaters or air conditioners, etc. shall require metering.

Each power supply will be set up as an individual account.

The service voltage will be 120 volts, single phase, two wire, maximum 15 amp.

The method and location of supply will vary and will be established for each application through consultation with Hydro One.

3.8.4. Traffic Signals

This section pertains to the distribution and supply of electrical energy for traffic signals and crosswalks. These are the devices owned and maintained by the road authority and/or the municipal corporation.

The service may be unmetered for small intersections while larger loads will be metered. Energy consumption will be based on the connected wattage and the calculated hours of use.

The service voltage will be 120/240 volts, single phase, three wire.

The method and location of the supply will vary and will be established for each application through consultation with Hydro One.

The Customer will provide the secondary conductor to the supply point. Hydro One will install and connect the service conductor at the supply point.

SECTION 4 GLOSSARY OF TERMS

“Acquired Local Distribution Company” means a distribution company or a distribution system acquired by Hydro One since April 1, 1999. “Affiliate Relationships Code” means the code, issued by the OEB and in effect at the relevant time, which among other things, establishes the standards and conditions for the interaction between electricity distributors or transmitters and their respective affiliated companies;

“Applicable Laws” means any and all applicable laws, including environmental laws, statutes, codes, licensing requirements, treaties, directives, rules, regulations, protocols, policies, by-laws, orders, injunctions, rulings, awards, judgments, or decree or any requirements or decision or agreement with or by any government or governmental department, commission, board, court authority or agency;

“Basic Connection” means a Connection of a Building that Lies Along that can be connected without requiring an Expansion;

“Billing Cycle Factor” means a factor applied to a bill amount in order to normalize to the length of the bill period plus forty-five (45) days for the purposes of calculating security deposit requirements, i.e., a monthly bill is adjusted by a Billing Cycle Factor of 2.5, a bi-monthly bill is adjusted by a Billing Cycle Factor of 1.75 and a quarterly bill is adjusted by a Billing Cycle Factor of 1.5;

“Bi-monthly Billing” means a notional and approximate sixty day (60) period for a billing cycle, not necessarily aligned with calendar months;

“Building that Lies Along” means a Customer property or parcel of land that is directly adjacent to or abuts onto the public road allowance where Hydro One has Hydro One Facilities and Equipment of the appropriate voltage and capacity;

“Common Line” means that portion of a line or private property that is owned by Hydro One and is used to serve more than one Customer;

“Complex Metering Installation” means a metering installation where instrument transformers, test blocks, recorders, pulse duplicators and multiple meters may be employed;

“Connection” means the process of installing and activating connection assets in order to distribute electricity to a Customer;

“Connection Agreement” means the agreement entered into between Hydro One and a person whose Customer Equipment is or is to be connected to the Distribution System that delineates the conditions of the Connection and delivery of electricity to or from that Connection;

"Connection and Cost Recovery Agreement" or "Connection Cost Recovery Agreement" means an agreement entered into between Hydro One and a person connected to its Distribution System that describes the work to be performed by Hydro One in connecting the Customer, the cost of same, any required capital contributions and/or revenue guarantees;

"Customer" means a person that has contracted for or intends to contract for connection of a building or an Embedded Generation Facility. This includes developers of residential or commercial subdivisions and Embedded Distributors;

"Customer Equipment" means all electrical and mechanical equipment used by the Customer that only supplies the Customer's home or business and does not include any Hydro One Facilities and Equipment;

"Demand Billed Customer" means a demand metered non-residential Customer with average monthly peak demand greater than 50 kW over the most recent calendar year that is read monthly and billed on kW demand as well as kWh energy;

"Demand Meter" means a meter that measures a Customer's peak usage during a specified period of time;

"Direct Customer" means a Customer other than a Large User or an Embedded Distributor, whose monthly measured maximum demand averaged over the most recent calendar year or whose forecasted monthly average demand over twelve consecutive months is equal to or greater than 5000 kW;

"Disconnect" or "Disconnection" means a deactivation of connection assets that results in cessation of Distribution Services to a Customer;

"Disconnect/Collect Trip" is a visit to a Customer's premises by an employee or agent of Hydro One to demand payment of an outstanding amount or to shut off or limit distribution of electricity to the Customer failing payment;

"Distribute" or "Distribution" with respect to electricity, means to convey electricity at voltages of 50 kV or less;

"Distribution Losses" means energy losses that result from the interaction of intrinsic characteristics of the distribution network such as electrical resistance with network voltages and current flows;

"Distribution Loss Factor" means the factor(s) by which metered loads must be multiplied such that when summed it equals the total measured load at the supply point(s) to the Distribution System;

"Distribution Services" means services related to the distribution of electricity and the services the OEB has required Distributors to carry out, for which a charge or

Rate has been approved by the OEB under Section 78 of the *Ontario Energy Board Act*;

"Distribution Standards" means Hydro One's distribution standards;

"Distribution System" means Hydro One's system for distributing electricity, and includes any structures, equipment or other things used for that purpose. The Distribution System is composed of the main system capable of distributing electricity to many Customers and the connection assets used to connect a Customer to the main Distribution System;

"Distribution System Code" means the code, issued by the OEB, and in effect at the relevant time, which, among other things, establishes the obligations of a Distributor with respect to the services and terms of service to be offered to Customers and Retailers and provides minimum technical operating standards of distribution systems;

"Distributor" means a person who owns or operates a distribution system;

"Distributor Consolidated Billing" is as described in the Retail Settlement Code;

"Electricity Act" means the *Electricity Act, 1998*, being Schedule A to the *Energy Competition Act*, S.O. 1998, c. 15, as amended;

"Electricity Distribution Rate Handbook" means the document issued by the OEB that outlines the regulatory mechanisms that will be applied in the setting of Distributor's Rates;

"Electrical Safety Authority" or "ESA" means the person or body designated under the regulations made pursuant to the *Electricity Act* as the Electrical Safety Authority;

"*Electrical Safety Code*" means the code referred to in O. Reg. 164/99, as amended;

"Electricity System" means the integrated power system and all facilities connected to that system;

"Embedded Distributor" or "Embedded LDC" means a Distributor that is provided electricity from the Distribution System;

"Embedded Generator" means a Generator whose Generation Facility is connected to the Distribution System;

"Embedded Generation Facility" means a Generation Facility which is not directly connected to the IESO-Controlled Grid but instead is connected to the Distribution System;

"Emergency" means any abnormal system condition that requires remedial action to prevent or limit loss of a Distribution System or supply of electricity that could adversely affect the reliability of the Electricity System;

"Emergency Backup Generation Facility" means a generation facility that has a transfer switch that isolates it from the Distribution System;

"Energy Only Customer" means any Customer with average monthly peak demand of 50 kW or less over the most recent calendar year that is billed for electricity service on kWh energy only;

"Expansion" is a situation in which Hydro One needs to construct new facilities to its Distribution System or increase the capacity of existing Hydro One Facilities and Equipment in order to be able to connect a specific Customer;

"Force Majeure Event" shall be deemed to be a cause reasonably beyond the control of the party whose inability as aforesaid is involved such as, but without limitation to, strike, lockout or other labour dispute of that party's employees, damage or destruction by the elements, accident to the works of that party, fire explosion, war on the Queen's enemies, legal act of the public authorities, insurrection, Act of God or inability to obtain essential services or to transport materials, products or equipment because of the effect of similar causes on that party's suppliers or carriers;

"Four-Quadrant Interval Meter" means an Interval Meter that records power injected into the Distribution System and the amount of electricity consumed by the Customer;

"General Service" means the Rate classification applicable to any service that does not fit the description of the year-round residential, seasonal residential or farm classes. Generally, it is composed of commercial, industrial, educational, administrative, auxiliary and government type services. It includes combination type services where a variety of uses are made of the service by the owner of one property, and all multiple services except residential with up to four units.

"Generate" or "Generating", with respect to electricity, means to produce electricity or provide ancillary services, other than ancillary services provided by a transmitter or distributor through the operation of a transmission or distribution system;

"Generation Facility" means a facility for Generating electricity or providing ancillary services, other than ancillary services provided by a transmitter or Distributor through the operation of a transmission or distribution system, and includes any structures, equipment or other things used for that purpose;

"Generator" means a person who owns or operates a Generation Facility;

"Good Utility Practice" means any of the practices, methods and acts engaged in or approved by a significant portion of the electric utility industry in North America during the relevant time period, or any of the practices, methods and acts which in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good practices, reliability, safety, and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in North America;

"High Density Zone" means an area containing 100 or more Customers with a line density of at least 15 Customers per kilometre. All classes of Customers are included in the density count;

"Hydro One Facilities and Equipment" means Hydro One's meters, wires, poles, cables, transformers, any other structures, equipment, all other appliances and equipment or other things used for distributing electricity;

"IESO" means the Independent Electricity System Operator established under the *Electricity Act*;

"IESO Controlled Grid" means the transmission systems with respect to which, pursuant to agreements, the IESO has the authority to direct operation;

"Interval Meter" means a meter that measures and records electricity use on an hourly or sub-hourly basis;

"Large Embedded Generation Facility" means an Embedded Generation Facility with a name-plate capacity of more than 10 MW;

"Large User" means an individual Customer in the service area of an Acquired Local Distribution Company whose monthly measured maximum demand (kW) averaged over the most recent calendar year or whose forecasted monthly average demand over twelve consecutive months is equal to or greater than 5000kW;

"Load Displacement" means in relation to a Generation Facility that is connected on the Customer side of the Ownership Demarcation Point, that the output of the Generation Facility is used or intended to be used exclusively for the Customer's own consumption;

"Load Limiter" is a device that will limit the amount of power delivered to **a** premise. Load interrupters are also used to limit the amount of power delivered. The load limiting devices are typically used during collection activity;

"Load Transfer" means a network supply point of one distributor that is supplied through the distribution network of another distributor and where this supply point is not considered a wholesale supply or bulk sale point;

"Load Transfer Customer" means a Customer that is provided Distribution Services through a Load Transfer;

"Market Participant" means a person who is authorized by the Market Rules to participate in the IESO-administered markets or to cause or permit electricity to be conveyed into, through or out of the IESO-controlled grid;

"Market Rules" means the rules made under Section 32 of the *Electricity Act*;

"Measurement Canada" means the Special Operating Agency established in August 1996 by the *Electricity and Gas Inspection Act* (Canada);

"Meter Installation" means the meter and, if so equipped, the instrument transformers, wiring, test links, fuses, lamps, loss of potential alarms, data recorders, telecommunication equipment and spin-off data facilities installed to measure power past a meter point, provide remote access to the metered data and monitor the condition of the installed equipment;

"Metering Services" means installation, testing, reading, and maintenance of meters;

"Micro-Embedded Generation Facility" means an Embedded Generation Facility with a name-plate rated capacity of 10 kW or less;

"Mid-Sized Embedded Generation Facility" means an Embedded Generation Facility with a name-plate rated capacity of 10 MW or less and:

(a) more than 500 kW in the case of a facility connected to a less than 15 kV line; and
(b) more than 1 MW in the case of a facility connected to a 15 kV or greater line;

"MIST" refers to "Metering inside the Settlement Timeframe";

"MIST Meter" means an Interval Meter from which data is obtained and validated within a designated settlement timeframe;

"Monthly Billing" means a notional and approximate 30-day period for a billing cycle, not a calendar month;

"MOST" refers to "Metering Outside the Settlement Timeframe";

"MOST Meter" means an Interval Meter from which data is only available outside of the designated settlement timeframe;

"Multiple Residential Properties" means a property, which provides separate living accommodation for two or more families. It does not include properties used for short-term occupancy such as hotels, motels, etc.;

"Normal Density Zone" means an area other than an Urban or High Density Zone;

"OEB" means the Ontario Energy Board;

"Ontario Energy Board Act" means the *Ontario Energy Board Act, 1998*, being Schedule B to the *Energy Competition Act*, S.O. 1998. c. 15, as amended;

"Operational Demarcation Point" means the physical location at which Hydro One's responsibility for operational control of distribution equipment, including Connection assets ends at the Customer;

"Ownership Demarcation Point" means the physical location at which Hydro One's ownership of distribution equipment, including Connection assets ends at the Customer;

"Personal Information" means any factual or subjective information, recorded or not, about an identifiable individual and this includes information in any form such as: age, name, ID numbers, income, ethnic origin, or blood type, opinions, evaluations, comments, social status, or disciplinary actions. Personal information does not include the name, title, business address or telephone of an employee of an organization.

"Point of Supply", with respect to an Embedded Generation Facility, means the Connection point where electricity produced by the Embedded Generation Facility is injected into the Distribution System;

"Present Value" means the current value of a future amount of money;

"Primary Metered Service" means a Connection whose meter point is located on the primary side of a distribution transformer;

"Primary Service" means a Connection directly to Hydro One's primary facilities. The Customer owns all conductors, supports and civil works located on its property;

"Private Property" means any property owned by a Customer or a third party and does not include any public street or highway;

"Public Holidays" mean the days designated by Hydro One from time to time. Until otherwise designated, the Public Holidays are: New Year's Day, Labour Day, Good Friday, Thanksgiving Day, Easter Monday, Christmas Day, Victoria Day, Boxing Day, Canada (Dominion) Day, and the Civic Holiday (as celebrated in Metropolitan Toronto);

"Qualified Contractor" means a contractor qualified to deal with electrical hazards in accordance with the requirements of the Occupational Health & Safety Act, (Ontario) as amended and all applicable regulations thereto including, Construction Projects – O. Reg. 213/91;

"Quarterly Billing" means a notional and approximate 90-day period for a billing cycle, not necessarily aligned with calendar months;

"Rate" means any rate, charge or other consideration, and includes a penalty for late payment;

"Refund Administration Service" means the service offered prior to the Distribution System Code coming into force to new Customers requiring an Expansion for Connection to the Distribution System, as such Customers were required to pay all costs of the Expansion. For a fee, Hydro One monitored new Connections to the line, to collect from any new Customers connecting to the original Expansion a fair share of the original costs and to administer a refund to the original or contributor or the present property owner. This service was provided in 5-year terms and could be renewed for additional 5-year terms upon additional payments of the fee. Customers who did not opt for a Refund Administration Service were not eligible for rebates if new Customers were added to the original expansion. Refund Administration Service is no longer offered to new Customers requiring Expansions for Connection.

"Registered Meter Service Provider" means a Person that provides, installs, commissions, registers, maintains, repairs, replaces, inspects and tests Metering Installations and is approved and registered by Measurement Canada and the IESO;

"Retail", with respect to electricity means,

a) to sell or offer to sell electricity to a Customer;

b) to act as agent or broker for a Retailer with respect to the sale or offering for sale of electricity; or

c) to act or offer to act as an agent or broker for a Customer with respect to the sale or offering for sale of electricity;

"Retail Settlement Code" means the code issued by the OEB and in effect at the relevant time, which, among other things, establishes a Distributor's obligations and responsibilities associated with financial settlement among Retailers and Customer and provides for tracking and facilitating Customer transfers among competitive Retailers;

"Retailer" means a person who Retails electricity;

"Retailer Consolidated Billing" is as described in the Retail Settlement Code;

"Secondary Metered Service" means a Connection whose meter point is located on the secondary side of a distribution transformer;

"Secondary Service" means a Connection to the low voltage side of Hydro One's transformer located on the Distribution System. Hydro One may own the conductor and the Standard Customer always owns all supports and civil works on the Customer's property;

"Service Transfer Request" is as described in the Retail Settlement Code;

"Single Phase" means a system that supplies a single alternating current electricity supply;

"Small Embedded Generation Facility" means an Embedded Generation Facility which is not a Micro-Embedded Generation Facility with a name-plate rated capacity of 500 kW or less in the case of a facility Connected to a less than 15 kV line and 1 MW or less in the case of facility connected to a 15 kV or greater line;

"Standard Customer" means any Customer who is not a Sub-transmission Customer, Large User, Direct Customer, Embedded Distributor or an Embedded Generator;

"Standard Supply Service" means the service approved by the OEB and in effect at the relevant time, which, among other things, establishes the minimum conditions that a Distributor must meet in carrying out its obligations to sell electricity under Section 29 of the *Electricity Act*;

"Standard Supply Service Code" means the code, issued by the OEB, and in effect at the relevant time, which, among other things, sets the minimum conditions that a Distributor must meet in carrying out its obligation to sell electricity under Section 29 of the *Electricity Act* unless otherwise stated in its licence;

"Sub-transmission Customer" or T-Class Customer – means an individual Customer that is typically served from Hydro One's sub-transmission system whose monthly measured maximum demand (kW) averaged over the most recent calendar year, or whose forecasted monthly average demand over twelve consecutive months is less than 5000 kW;

"Sub-transmission Service" means a service related to the Distribution of electricity supplied at voltages above 13 kV, 3 wire but less than 50 kV, 3 wire for which a charge or Rate has been approved by the OEB;

"Sub-transmission System" means a system related to the Distribution of electricity supplied at voltages above 13 kV, 3 wire but less than 50 kV, 3 wire;

"Three Phase" means a system having three distinct alternating currents 120 degrees between each phase;

"Total Losses" means the sum of Distribution Losses and Unaccounted for Energy;

"Unaccounted for Energy" means all energy losses that cannot be attributed to Distribution Losses. These include measurement error, errors in estimates of Distribution Losses and, energy theft and non-attributable billing errors;

"Unmetered Loads" means electricity consumption that is not metered and is billed based on estimated usage;

"Urban Density Zone" means an area containing 3,000 or more Customers with a line density of at least 60 Customers per kilometre. All classes of Customers are included in the density count;

"Utilization Voltage" means the highest voltage at which a Customer uses or distributes power on the Customer's property;

"Validating, Estimating and Editing" or "VEE" means the process used to validate, estimate and edit raw metering data to produce final metering data or to replicate missing metering data for settlement purposes;

"Wholesale Market Participant", means a person that sells or purchases electricity or ancillary services through the IESO administered markets.

Appendix A

A. <u>Description of Certain Agreements</u>

I. Connection and Cost Recovery Agreement

Section 2.1.7C of the Conditions of Service describes the Customers that are required to enter into a Connection and Cost Recovery Agreement (the "CCRA") with Hydro One. Key provisions in the CCRA are:

- a description of the work to be performed by Hydro One including specifications such as capacity and voltage range and work to be performed by the Customer;
- final Ownership Demarcation Point for Connection;
- requirement that Customer obtain all necessary approvals for the construction and Connection, including ESA approval, except where specifically noted that Hydro One is obligated to obtain the approval;
- property requirements, e.g. easements;
- requirement that both parties perform their work in accordance with Good Utility Practice, in compliance with the Conditions of Service, the Distribution System Code, all Applicable Laws and using duly qualified and experienced people;
- an estimate of the cost (plus applicable taxes) of the work to be performed by Hydro One;
- capital contribution requirements (if any) and associated payment schedule;
- annual revenue requirements to be met by Customer including financial and non-financial default conditions;
- true-up methodology and applicability for capital contribution and revenue guarantee(s) to reflect the difference between the actual cost and the estimate;
- Customer may be required to furnish security satisfactory to Hydro One, including deposit;
- liability to each other limited to damages that arise directly out of the wilful misconduct or negligence in meeting their respective obligations under the CCRA;
- deferral, cancellation or termination clauses that the Customer pays Hydro One for the cost of the work performed to date and the cost associated with the winding up of the work; and
- a requirement to execute certain other agreements before the actual Connection is made, e.g. a Connection Agreement.

II. Customer Service Contract

Key provisions of the Customer Service Contract are:

- a description of the work to be performed by Hydro One including specifications such as capacity and voltage range and work to be performed by the Customer;
- final Ownership Demarcation Point for Connection;

- requirement that Customer obtain all necessary approvals for the construction and Connection, including ESA approval, except where specifically noted that Hydro One is obligated to obtain the approval;
- property requirements, e.g. easements;
- requirement that both parties perform their work in accordance with Good Utility Practice, in compliance with the Conditions of Service, the Distribution System Code, all Applicable Laws and using duly qualified and experienced people;
- an estimate of the cost (plus applicable taxes) of the work to be performed by Hydro One;
- a requirement that the Customer reimburses Hydro One for costs and expenses in certain circumstances, e.g. where the Customer changed the condition of the Service Location or the Electrical System;
- Hydro One and the Customer liable for damages only that arise directly out of the wilful misconduct or negligence and HONI's total liability is limited to the aggregate amounts paid for the Work by the Customer to the date of such negligent act or wilful misconduct.

III. Subdivision Agreement

Developers shall execute a Subdivision Agreement in respect of the Connection of a subdivision to the Distribution System. Key provisions of the Subdivision Agreement are:

- a description of the work to be performed by Hydro One, including inspection of Developer's contractor's work;
- detailed description of the work to be performed by the Developer;
- requirement that Developer obtain all necessary approvals for the construction and Connection, including ESA approval, except where specifically noted that Hydro One is obligated to obtain the approval;
- property requirements, e.g. easements;
- an estimate of the cost (plus applicable taxes) of the work to be performed by Hydro One;
- security deposit and capital contribution requirements;
- requirement that Developer provide evidence of Developer's proposed contractor's previous experience and satisfactory performance prior to contractor beginning the installation of the Electrical Distribution System;
- obligation to transfer Electrical Distribution System and the Line Extension constructed by the Developer to Hydro One free and clear for one dollar;
- Developer required to warrant the Electrical Distribution System and the Line Extension constructed by the Developer to be free from defects for two (2) years following energization and must provide a letter of credit to secure these obligations;
- Hydro One's liability limited to damages that arise directly out of the wilful misconduct or negligence of Hydro One; and
- Developer to maintain certain specified types of insurance with minimum limits during term of the Subdivision Agreement.

IV. Connection Agreements (Embedded Distributor, Sub-transmission Customer, Large User, Direct Customer or Standard Customer):

Subsection 2.1.7E(i) of the Conditions of Service describes the Customers required to enter into a Connection Agreement with Hydro One. Hydro One's form of the Distribution Connection Agreement sets out the terms upon which Hydro One has agreed to offer and the Customer has agreed to accept connection service. Key provisions and requirements of Hydro One's form of Connection Agreement are:

- Terms, conditions and obligations of the parties as prescribed under the Distribution System Code;
- lists all necessary contact names and telephone numbers of both parties to ensure proper communication;
- the demarcation of the Ownership Demarcation Point and the Operational Demarcation Point as between Hydro One and the Customer;
- description of the language and procedures to be used for communications between the parties in normal and emergency situations;
- technical description of the Customer's installed protection equipment;
- the single line diagram provided by the Customer that identifies the interface of the Customer's facilities with the Distribution System;
- the description of the metering information;
- the tariff applications by supply point as well as payment requirements;
- the levels of maintenance and testing to be performed by both parties;
- the circumstances under which the Customer can be disconnected from the Distribution System for financial or non-financial defaults;
- the specific technical requirements applicable for a particular type of Customer:
    1. Load Customers: includes Hydro One's requirements with respect to disconnection devices, system design and protection, metering and grounding, capacity of each connection point, motor size and starting and operating requirements; and
    2. Embedded LDCs: includes Hydro One's requirements with respect to disconnection devices, protection and coordination and metering as well as the data to be provided by the Embedded LDC when making requests for additional supply, capacity of each embedded connection point, requirements for load forecast information to be provided by Embedded LDC for each connection point for use in supply planning studies, and may include specific thresholds for embedded load connections, e.g. load/motor sizes, for system impact assessment studies;
- performance requirements for various power quality items such as voltage variations, unbalances, voltage and current harmonics;
- for most Customers, description of metering, instrument transformer, meter programming and meter communications requirements as well as specification of site specific losses; and
- the name of the Customer's Registered Meter Service Provider.

V. Read Only Access Agreement To Interval Meters

If a Customer who is not a Wholesale Market Participant requires remote electronic access to their interval meter recorders, the Customer must execute a Read Only Access Agreement ("ROA"). The ROA allows Customers to have remote electronic access to their interval meter recorders for the purposes of obtaining kilowatt hour and kilovar hour billing meter quantities. Key provisions of the ROA Agreement are:

- Customer is permitted to use, at its expense, only software and communications protocols that have been specifically approved by Hydro One;
- Customer access is limited to daily interrogations, within a time frame specified by Hydro One;
- Hydro One does not provide assistance for reading or interpretation of Metering Information; and
- Customer may have only one third party, who has been approved by Hydro One, to have remote access to the metering data on its behalf.

VI. Access Agreements

Customers requiring ongoing access to Hydro One Facilities and Equipment to operate or maintain Distribution equipment including wholesale revenue metering must enter into an Access Agreement. Key provisions of an Access Agreement are:

- requirement to comply with Hydro One's security protocol and Access Policy and Procedures;
- requirement to provide a list of employees, temporary employees, agents, subcontractors and licencees (the "Customer Personnel") requiring access;
- Customer responsible for ensuring that Customer Personnel have adequate Electrical Safety Awareness Training;
- Customer required to use the contact number provided by Hydro One to enter and exit Distribution facility;
- describes the limitations on access within operational areas within the Distribution facility; and
- Customer is responsible for any and all losses to persons (including death) including Customer personnel or property when accessing the specified Hydro One Facilities and Equipment.

B. <u>How to Obtain Copies of the Above-Referenced Agreements</u>

To obtain a copy of any of the above-referenced agreements, please contact Hydro One during its normal business hours: Monday to Friday from 7:30 am to 8 pm. E.T. at 1-888-664-9376 to be directed to the appropriate Distribution Planner.
