Dear Ms. Walli:

Re: EB-2008-0003 Revised Proposed Amendments to the Transmission System Code for Connecting Generation Facilities that Form Part of Renewable Resource Clusters

The Electricity Distributors Association (EDA) is the voice of Ontario's electricity distributors.

The EDA has reviewed the revised proposed amendments to the Transmission System Code. As indicated in the EDA's December 1st submission, the EDA supports the OEB proposed amendments to the Transmission System Code regarding cost responsibility associated with enabler facilities for renewable resources. The EDA also has no concerns with the proposed refinements dealing with security deposits, load connections, definitions, capital contribution determinations and cost responsibility for generation outside renewable resource clusters. The EDA also looks forward to improving the transmitter designation process to clarify roles and responsibilities and further details on the approval process for system expansions or reinforcement plans to accommodate renewable generation.

Yours truly,

“original signed”

Richard Zebrowski
Vice President, Policy & Corporate Affairs
