Tillsonburg Hydro Inc. 2024 Cost of Service Application EB-2023-0053 Exhibit 7 – Cost Allocation April 30, 2024 Page 3 of 12

1. COST ALLOCATION STUDY REQUIREMENTS

1.1 Introduction

The OEB outlined its cost allocation policies in its reports of November 28, 2007 Application of

Cost Allocation for Electricity Distributors, and March 31, 2011 Review of Electricity Distribution

Cost Allocation Policy (EB-2010-0219).

5 6

15 16

17

18

1

2

4

7 In this application, Tillsonburg Hydro Inc. ("THI") has used the 2024 version of the cost allocation

8 model released by the OEB on June 23, 2023 to conduct a 2024 test year cost allocation study

consistent with the OEB's cost allocation policies. The model has been loaded with 2024 test

year costs, customer numbers and demand values relevant to THI. The 2024 demand values

were determined based on the description provided under the Load Profiles section of this Exhibit.

The various weighting factors used in the 2024 study are also explained below.

1.2 Load Profiles

In preparing this Application, THI assessed available methodologies to prepare updated load profiles for its rate classes based on more recent data, and is of the view that the most appropriate

methodology is the Historical Average approach using weather-actual data outlined in section

2.7.1.1 of the Filing Requirements. To prepare updated load profiles utilizing this method, a

minimum of three years of hourly data is required, with five years of hourly data being optimal. At

the time of preparing Cost Allocation and its inputs, THI only had two years of data available.

19 20

23

25

26

27

21 THI determined that the most appropriate course of action was to leverage a simplified version of

22 the method used in its 2013 Cost of Service ("COS") application to determine the demand data

for the 2024 Model. The original method involves scaling the 2004 weather normalized volumes

24 supporting the 2004 load profiles to determine an estimate of the 2024 weather normalized load

profiles. In its simplified approach, THI relied on the 2013 Demand Allocators themselves (i.e. 1,

4, and 12 Coincident Peak and Non-Coincident Peak), and scaled them upwards proportionate

to its 2024 Load Forecast outlined in Exhibit 3.

28 29

30

31

To accomplish this, THI determined a scaling factor by rate class by comparing the 2013 and

2024 forecast kWh by rate class, as shown in Table 7-1 below. The hourly 2004 demand provided

by Hydro One is pro-rated such that total annual consumption matches THI's 2024 test year load

forecast consumption by rate class. THI has provided an Excel spreadsheet named "THI_2024_Demand_Allocators_20240430" as Appendix A to this Exhibit to show how the 2024 demand data is determined.

Table 7-1 Load Profile Scaling Factors

| Rate Class | 2013 Weather Normal Values (kWh) | 2024 Weather Normal Values (kWh) | Scaling Factor |
|-------------------|--|---|-------------------|
| Residential | 49,906,667 | 61,627,888 | 123.5% |
| GS < 50 kW | 22,650,334 | 23,022,735 | 101.6% |
| GS 50-499 kW | 38,065,105 | 51,946,339 | 136.5% |
| GS 500-1499 kW | 36,286,504 | 19,312,053 | 53.2% |
| GS 1500-4999kW | 34,524,454 | 17,727,224 | 51.3% |
| USL | 421,538 | 331,791 | 78.7% |
| Sentinel Lighting | 116,952 | 71,581 | 61.2% |
| Streetlighting | 1,405,153 | 619,623 | 44.1% |
| Total | 183,376,707 | 174,659,234 | |

For its next COS application, THI commits to the development of updated load profiles based on available methodologies at that time, which THI expects will include its preferred Historical Average approach. THI confirms that the required data is currently being collected, and will continue to be collected, to inform updated load profiles utilizing this methodology.

1.3 Cost Allocation Inputs / Weighting Factors

1.3.1 Services (Sheet **I5.2**)

THI assessed the Services Weighting Factors relied upon in its 2013 Cost Allocation study, and found them to be reasonable for the purposes of establishing rates in this Application.

As per the suggested methodology in the Cost Allocation instruction sheet the Residential class was given a weighting factor of 1.0. Services for larger General Service customers involves significantly more work than Residential and GS <50kW servicing both from a design and construction perspective, but due to the ownership rules for these services, THI does not own the assets that would be charged against the Services account and therefore GS 500-1,499kW and

- 1 GS 1500-4,999kW have been assigned a factor of 0.0, with GS 50-499kW assigned a factor of
- 2 0.2. Unmetered Scattered Load ("USL"), Sentinel lights, and Street lights were given a factor of
- 3 0.1 as these service connections are infrequent and less complex in nature.

Table 7-2 Weighting Factors for Services

| Rate Class | Weighting Factors for Services |
|-------------------|--------------------------------------|
| Residential | 1.0 |
| GS < 50 kW | 0.6 |
| GS 50-499 kW | 0.2 |
| GS 500-1499 kW | 0.0 |
| GS 1500-4999kW | 0.0 |
| USL | 0.1 |
| Sentinel Lighting | 0.1 |
| Streetlighting | 0.1 |

5 6

4

1.3.2 Billing and Collection (Sheet I5.2)

7 8 9

THI assessed the Billing and Collection Weighting Factors relied upon in its 2013 Cost Allocation study, and found them to be reasonable for the purposes of establishing rates in this Application.

11 12

10

In assessing the reasonableness of the Weighting Factors applied for Billing and Collection, THI considered items such as:

14 15

13

 The amount of administrative tracking required in the managing of the connections related to Unmetered Scattered Load, Streetlights and Sentinel Lights, such as additions and deletions;

16 17

• The amount of time required to bill an interval customer relative to a non-interval;

18 19 Monitoring kVa demand to ensure proper classification of GS customers amongst THI's 4 GS rate classes.

2021

Table 7-3 below presents the Billing and Collection Weighting Factors relied upon for cost allocation purposes.

1 2

Table 7-3: Billing and Collection Weighting Factors

| Meter Type | Weighting Factors for Billing and Collection |
|-------------------|---|
| Residential | 1.0 |
| GS < 50 kW | 0.9 |
| GS 50-499 kW | 3.4 |
| GS 500-1499 kW | 11.8 |
| GS 1500-4999kW | 12.6 |
| USL | 0.7 |
| Sentinel Lighting | 0.7 |
| Streetlighting | 7.9 |

3

1.3.3 Meter Capital (Sheet I7.1)

4 5 6

7

THI has updated Sheet I7.1 to reflect current customer and meter count in alignment with its Load Forecast described in Exhibit 3, as well as estimated typical installation cost by rate class for the 2024 Test Year.

8

Table 7-4: Meter Capital Installation Costs

| Meter Type | Installation Cost per Meter |
|--|--------------------------------|
| Single Phase 200 Amp - Rural | 231 |
| Network Meter | 283 |
| Three-phase - No demand | 769 |
| Demand with IT and Interval Capability - Secondary | 2,050 |
| Demand with IT and Interval Capability - Primary | 25,930 |
| THI Specific Smart Meter 1 | 631 |
| THI Specific Smart Meter 2 | 769 |
| THI Specific Smart Meter 3 | 2,050 |

10

1.3.4 Meter Reading (Sheet I7.2)

11 12

13

14

15

THI completed an analysis of the costs included in meter reading, and assessed Residential, GS<50kW and GS 50-499kW should be assigned the same weighting of 1.00 given that all customers now have smart meters. To address the complexities associated with the larger GS 500-1,499kW and GS 1,500-4999kW rate classes, a weighting of 10.00 was assigned.

17

1.3.8 MicroFIT Class

5 THI is not seeking approval for a distributor-specific MicroFIT rate, and will utilize the OEB's 6 established generic rate, recording revenues as a revenue offset in Account 4235 as confirmed

7 in Exhibit 6.

1.3.9 Standby Rates

THI is not seeking approval for standby rates in this application.

1.3.10 New Customer Class

11 THI is not proposing to include a new customer class.

1.3.11 Eliminated Customer Class

13 THI is not proposing to eliminate any customer class.

2. CLASS REVENUE REQUIREMENTS

2.1 Class Revenue Requirements

The data used in the updated cost allocation study is consistent with THI's cost data that supports the proposed THI revenue requirement outlined in this application. The breakout of assets, capital contributions, depreciation, accumulated depreciation, customer data and load data by primary, line transformer and secondary categories were developed from the best data available to THI, its engineering records, and its customer and financial information systems. An Excel version of the updated cost allocation study has been included as Appendix B to this Exhibit (THI_2024_Cost_Allocation_Model_20240430).

2324

25

Capital contributions, depreciation and accumulated depreciation by USoA are consistent with the information provided in the THI continuity statement shown in Exhibit 2. The rate class customer

Tillsonburg Hydro Inc. 2024 Cost of Service Application EB-2023-0053 Exhibit 7 – Cost Allocation April 30, 2024 Page 8 of 12

data used in the updated cost allocation study is consistent with the THI customer forecast outlined in Exhibit 3.

3

The following table provides the allocated cost by rate class from the approved 2013 cost allocation study and the updated 2024 study.

6 7

8

5

Table 7-6: Allocated Cost

(Consistent with RRWF, Tab 11 Cost Allocation, Allocated Costs)

| Rate Class | 2013 Board Approved Cost Allocation Study | % | Cost Allocated in the 2024 Study | % |
|-------------------|---|--------|---|--------|
| Residential | \$2,210,132 | 61.8% | \$3,930,355 | 69.4% |
| GS < 50 kW | \$618,921 | 17.3% | \$637,064 | 11.3% |
| GS 50-499 kW | \$365,063 | 10.2% | \$811,040 | 14.3% |
| GS 500-1499 kW | \$170,642 | 4.8% | \$112,709 | 2.0% |
| GS 1500-4999kW | \$137,258 | 3.8% | \$101,309 | 1.8% |
| USL | \$9,524 | 0.3% | \$15,031 | 0.3% |
| Sentinel Lighting | \$16,045 | 0.4% | \$28,457 | 0.5% |
| Streetlighting | \$47,170 | 1.3% | \$25,028 | 0.4% |
| Total | \$3,574,755 | 100.0% | \$5,660,994 | 100.0% |

9

10

11

12

3. REVENUE-TO-COST RATIOS

3.1 Revenue to Cost Ratios

The results of a cost allocation study are typically presented in the form of revenue to cost ratios.

The ratio is shown by rate classification and is the percentage of distribution revenue collected by

rate classification compared to the costs allocated to the classification. The percentage identifies
the rate classifications that are being subsidized and those that are over-contributing. A

percentage of less than 100% means the rate classification is under-contributing and is being

subsidized by other classes of customers. A percentage of greater than 100% indicates the rate

classification is over-contributing and is subsidizing other classes of customers.

19 20

17

Tillsonburg Hydro Inc. 2024 Cost of Service Application EB-2023-0053 Exhibit 7 – Cost Allocation April 30, 2024 Page 9 of 12

- 1 In the March 31, 2011 Board Report, the Board established what it considered to be the
- 2 appropriate ranges of revenue to cost ratios which are summarized in Table 7-7 below. In addition,
- 3 Table 7-7 provides THI's approved revenue to cost ratios from the approved 2013 CoS
- 4 application, the updated 2024 cost allocation study and the proposed 2024 to 2028 ratios.

Table 7-7: Revenue to Cost Ratios

(Consistent with RRWF, Tab 11 Cost Allocation, Proposed & Rebalancing Revenue to Cost Ratios)

| Rate Class | 2013 Board Approved | 2024 Updated Cost Allocation Study | 2024 Proposed Ratios | 2024 to 2028 Proposed Ratios | Board Targets Min to Max | |
|-------------------|------------------------|---|----------------------------|------------------------------------|--------------------------------|--------|
| Residential | 96.3% | 95.3% | 96.3% | 96.3% | 85.0% | 115.0% |
| GS < 50 kW | 107.6% | 139.4% | 120.0% | 120.0% | 80.0% | 120.0% |
| GS 50-499 kW | 96.3% | 79.6% | 96.3% | 96.3% | 80.0% | 120.0% |
| GS 500-1499 kW | 107.4% | 143.1% | 120.0% | 120.0% | 80.0% | 120.0% |
| GS 1500-4999kW | 120.0% | 143.7% | 120.0% | 120.0% | 80.0% | 120.0% |
| USL | 120.0% | 88.1% | 96.3% | 96.3% | 80.0% | 120.0% |
| Sentinel Lighting | 60.0% | 45.4% | 96.3% | 96.3% | 80.0% | 120.0% |
| Streetlighting | 120.0% | 191.9% | 120.0% | 120.0% | 80.0% | 120.0% |

8 The THI cost allocation study indicates the revenue to cost ratio for the following rate classes

9 were outside of the OEB's identified ranges:

• GS <50kW (above 120%)

GS 50-499kW (below 80%)

GS 500-1,499kW (above 120%)

• GS 1500-4,999kW (above 120%)

Sentinel Lighting (below (80%))

Streetlighting (above 120%)

To rebalance revenue to cost ratios within the OEB's identified ranges, THI first adjusted the ratio's of GS<50kW, GS 500-1,499kW, GS 1,500-4,999kW and Streetlighting downward to a revenue to cost ratio of 120%. Subsequently, GS 50-499kW and Sentinel Lighting revenue to cost ratios were increased to 80%, however costs remained unrecovered absent further adjustments. THI adjusted Residential, GS 50-499kW, USL and Sentinel Lights upward to the point of revenue neutrality, which was reached at a revenue to cost ratio for these rate classes of 96.3%.
